Before you begin

You can connect up to four 4K external displays or one 8K and above display using the four Thunderbolt 4 on your Precision 5470.

Total number of displays supported:

- Four 4K external displays: 4 ports (Thunderbolt 4)
- One 8K

Before you begin, ensure that you:

- [Check the graphics options on your computer](#)
- Check the ports available on your external displays and decide the [Mode of connection](#).

Check the graphics options on your computer

The number of external displays supported depends on the type of graphics card available on your computer:

- The integrated graphics card can support a maximum of 4 displays
- The hybrid graphics card can support a maximum of 4 displays

NOTE:

- Dell Docking Station—WD19DCs display behavior follows the host the Thunderbolt 4 (USB Type-C) port
- The HDMI 2.1 port and MFDC (MFDP) Type-C port on the WD19DCs docking station cannot support dual monitors simultaneously

For more information on the graphics card available on your computer, run Dell SupportAssist on your computer, or scan your hardware at www.dell.com/support.

The following are the graphic options that may be installed in your computer:

- Intel Iris X^e Graphics (Integrated graphics)
- Intel Arc Pro A40M Graphics (Hybrid graphics)
- NVIDIA RTX A1000 laptop (Hybrid graphics)

External display connection mode

External display connection mode selected in the BIOS defines the number of displays supported by the computer.

 NOTE: External display connection mode is not applicable on the integrated graphic card only configuration.

External display connection modes are:

- Hybrid Graphics mode
- Hybrid Graphics mode with Direct Output
- Discrete Graphics mode

Hybrid Graphics mode

To enable Hybrid Graphics mode in the computer's BIOS:

1. Restart the system and immediately press **<F2>** to enter the BIOS.
2. On the BIOS screen, select **Video**.
3. Select **Switchable Graphics**.
4. Select **Enable Switchable Graphics**.
5. Save changes and exit the computer's BIOS.

For more information about accessing and configuring the BIOS, see the computer's *Service Manual* at www.dell.com/support.

Hybrid Graphics mode with Direct Output

To enable **Hybrid Graphics mode with Direct Output** in the computer's BIOS:

1. Restart the system and immediately press **<F2>** to enter the BIOS.
2. On the BIOS screen, select **Video**.
3. Select **Switchable Graphics**.
4. Select **Enable Switchable Graphics**.
5. Select **Discrete Graphics Controller Direct Output Mode**.
6. Save changes and exit the computer's BIOS

For more information about accessing and configuring the BIOS, see the computer's *Service Manual* at www.dell.com/support.

Discrete Graphics Mode

To enable **Discrete Mode** in the computer's BIOS:

1. Restart the system and immediately press **<F2>** to enter the BIOS.
2. On the BIOS screen, select **Video**.
3. Select **Switchable Graphics**.
4. Uncheck **Enable Switchable Graphics**.
5. Save changes and exit the computer's BIOS

For more information about accessing and configuring the BIOS, see the computer's *Service Manual* at www.dell.com/support.

Turn off the internal display

There may be instances where you may want to turn off the computer's internal display to connect more external displays.

You can turn off the LCD display of your computer by using the Intel HD Graphics Command Center.

To turn off the display:

1. In the Windows search bar, type **Intel Graphics Command Center** and press **<Enter>**.
2. Accept the **Intel Graphics Command Center** software licence agreement.
3. On the **Intel Graphics Command Center** window, click **Display**. The list of active displays is listed under the **Connected Displays** section.
4. Click the ellipsis (...) in the top-right corner of your primary display, then click **Extend > Display 2**.
5. Click the ellipsis (...) in the top-right corner of display 2, then click **Make Display Primary**.
6. Click the ellipsis (...) in the top-right corner of your computer's display, then click **Disable**.

Connect displays

Depending on the connectors available on your external display, you can connect the displays to the Thunderbolt 4 (USB Type-C) ports, HDMI port, Mini DisplayPort on your computer using:

- Thunderbolt 4 cables, adapters or docking stations
- USB Type-C cables, adapters or docking stations
- HDMI cables or adapters
- Mini DisplayPort cables or adapters

NOTE: To experience the full resolution supported by your external displays, use appropriate cables. For examples, use DisplayPort or HDMI cables for 4K and above resolution.

Troubleshooting

Question

When I connect an 8K display using the USB Type-C to DisplayPort adapter, the monitor resolution is 4k.

Cause

This may be because of incorrect settings in the BIOS.

Workaround

Ensure BIOS setting is special graphics mode or discrete graphics mode.

For more information about accessing and configuring the BIOS, see the computer's *Service Manual* at www.dell.com/support.

Question

When I connect an 8K display using the USB Type-C to DisplayPort adapter, the display resolution can reach to 8K, but refresh rate cannot reach to 60Hz.

Workaround

Connect the 8K display with the dual USB Type-C to DisplayPort adapter or one USB Type-C to DisplayPort adapter + one Mini DisplayPort.

Connect the 8K display with dual cable WD19DCs dock dual DisplayPort or Host dual USB Type-C to DisplayPort adapter or Host DisplayPort adapter + one Mini DisplayPort.
