

How global business Modula elevated disaster recovery

“We’ve made a series of investments in HPE technology that put us in a different league from where we were before. We can access and protect our global network from a centralized location while prioritizing the systems that are most vital to our business and scale accordingly.”

– **Enrico Lazzaris**, Group Information Systems Manager, Modula

Solution:
Networking

Industry:
Manufacturing

Country:
Italy

Delivering reliable IT services to your team is one thing — it’s another when your team is 1000 people across 12 countries. For a global company such as Modula, that meant shoring up the company’s network and disaster recovery (DR) solutions on a global scale. The IT team had to think about natural disasters as well as the legal and operational challenges of not having adequate DR in place. With HPE, Modula found a better network and more modern DR.

Solution:
Networking

Industry:
Manufacturing

Country:
Italy

Objectives

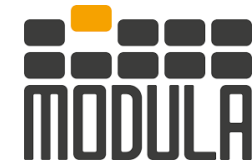

- Improve network performance
- Develop a more modern DR approach
- Ensure mission-critical workloads are always properly backed up

Requirements

- Control of global network from a singular location
- Unified system across countries
- Reliable global partner

Solution

- HPE Aruba Networking
- HPE Alletra 6000
- HPE ProLiant DL325 Gen11 Server
- Zerto

Outcomes

- Can control and protect entire network from Italian HQ
- Created secondary data center for DR
- Most important workloads — such as ERP and CRM — constantly in sync with new data center
