

Mobile Telescopic Mast

The solid base for your rapid deployment
CCTV security solution

Temporary, fast and secure protection!

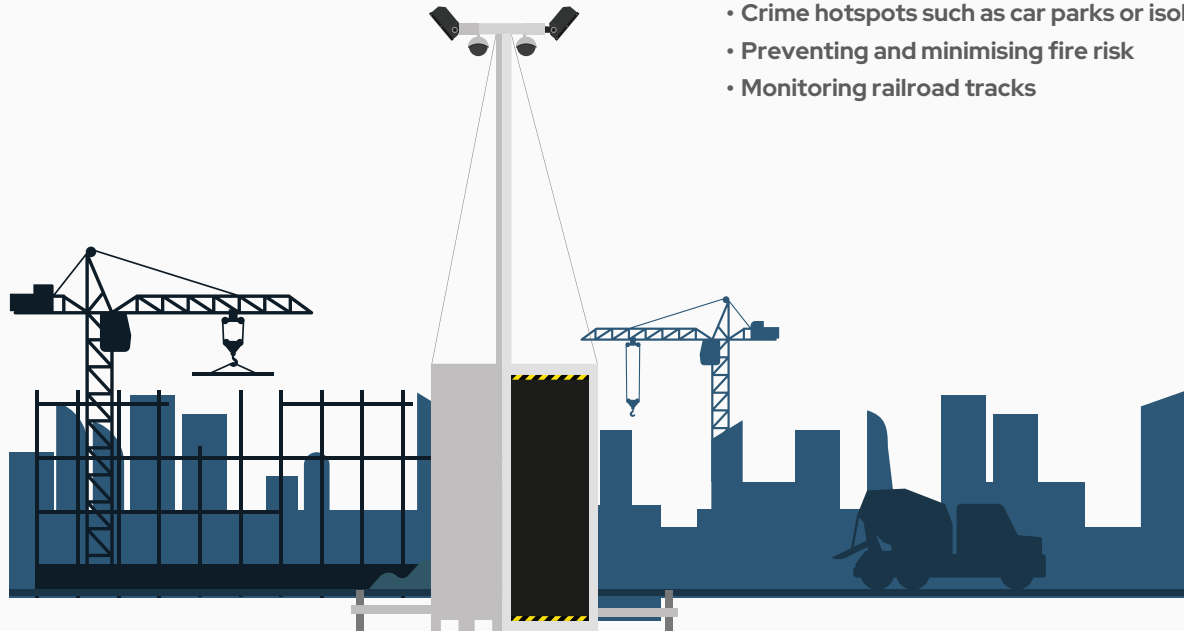

Protect people, sites and assets.

Mobile Telescopic Masts are used for the protection of unmanned sites, temporary installations and supporting on-site, manned guarding.

The market for temporary and rapid deployment CCTV systems is growing fast. Savings of 60% can be made over manned guarding costs and intruders can be detected quickly. Minimising damage, loss or delays in ongoing projects.

Typical applications include:

- Improving safety at major events, festivals, concerts & public gatherings
- Construction and industrial site security
- Roadside and traffic monitoring
- Protecting vacant properties
- Protecting infrastructure
- Reducing cable and metal theft
- Wind and solar farm security
- Crime hotspots such as car parks or isolated locations
- Preventing and minimising fire risk
- Monitoring railroad tracks

guarding

Build your own rapid deployment cctv solution

Create your CCTV solution

Our Mobile Telescopic Mast is designed to be compatible with all the major manufacturers of surveillance equipment. It is built with enough space inside to store all your electronic equipment or power, safely inside the vandal resistant box.

This will give you the flexibility to build your own solution, fit for purposes for your market and customer requirements.

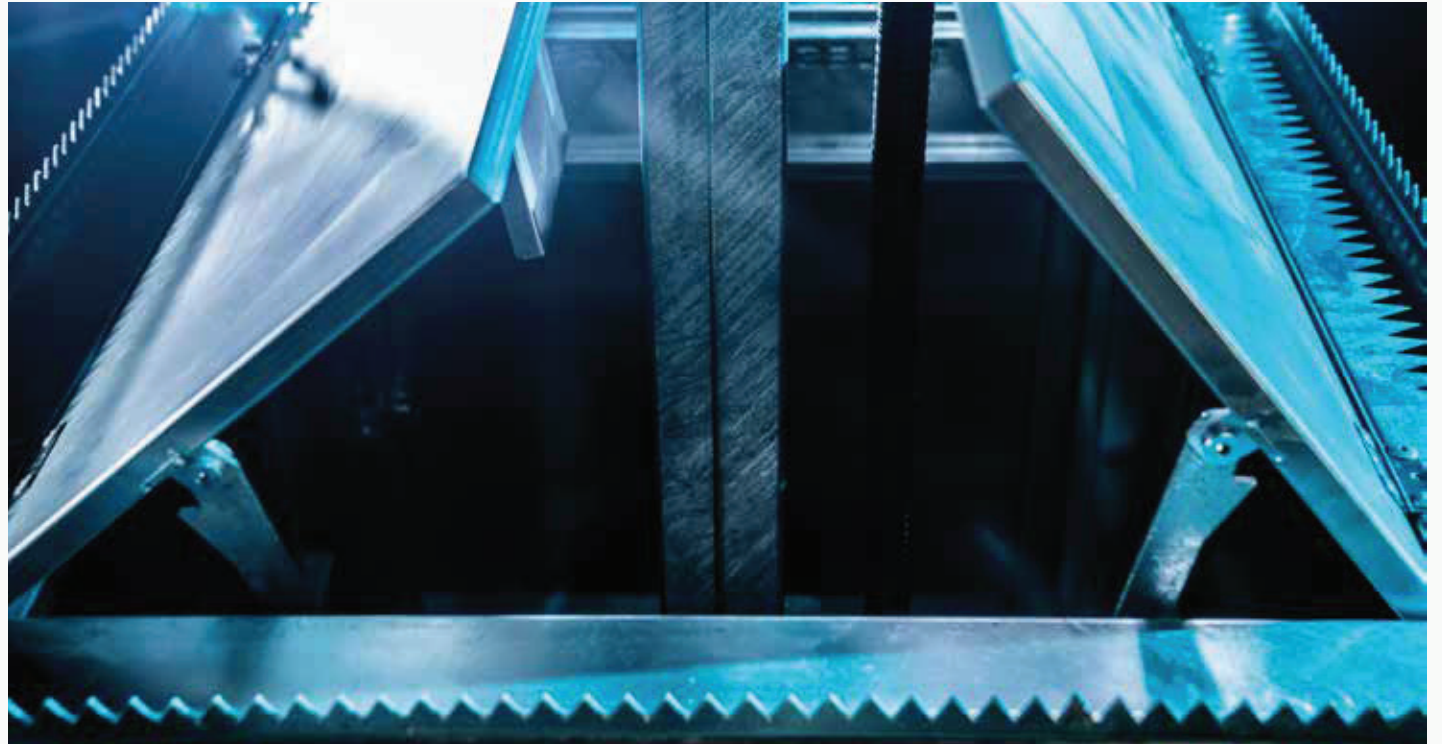

The advantage of this is that you are not locked into an expensive pre-built solution. This means that you can save money and time. In addition, you can differentiate your solution with your equipment and branding for your specific market. There are three Mobile Telescopic Masts in the Ernitec mobile solution range.

Choose the Enterprise Telescopic Mast if you require:

- Lockable roof
- 2 doors, lockable
- Anti roof climb protection
- Heavy-duty mast
- Heavy-duty ground frame

Choose the Base Plus Telescopic Mast if you need:

- Lockable roof
- 1 door, lockable
- Anti roof climb protection
- Lower cost
- Lighter mast
- Lighter mast ground frame

Add your own devices...

Extendable mast up to 6 meters

Ernitec mobile solutions and their Mobile Telescopic Masts for temporary installations that require rapid deployment and secure protection for your electronic equipment - are just state of the art.

We are focused on building high quality and affordable Mobile Telescopic Masts. Ernitec mobile solutions is committed to your success and we are continuously looking for feedback to further innovate and improve our products.

"To reduce costs we have looked at several options that can be deployed by a single person. Ernitec mobile solutions is clearly top of the market, also from a price /quality perspective."

"We have chosen for Ernitec mobile security box because their mast is robust, secure and easy to transport. It is clearly designed for the rigours of our construction sites and we can easily brand this with our own messaging."

Easy, fast and vandal resistant

Features of the Mobile Telescopic Mast

- 1 Built-in six metres extendable mast with a 4 spoke mast top with standard mounts for CCTV cameras or floodlight.
- 2 Steel cables to the masthead which reduce camera vibration that causes false alarms.
- 3 Easy to brand with your personalised message on all four sides of 2m x 1m panels, making this a highly visible way to promote your company.
- 4 Fast to install by only one engineer using the manual winch, reducing installation costs.
- 5 Vandal resistant lockable steel box construction with two lockable top covers protecting your electronic equipment inside.
- 6 Four extendable stabilisers and spirit level to ensure the mast is stable, even in strong winds up to 85km/h.
- 7 Heavy duty forklift slots and mounting points, making it easy for transportation and on site deployment.

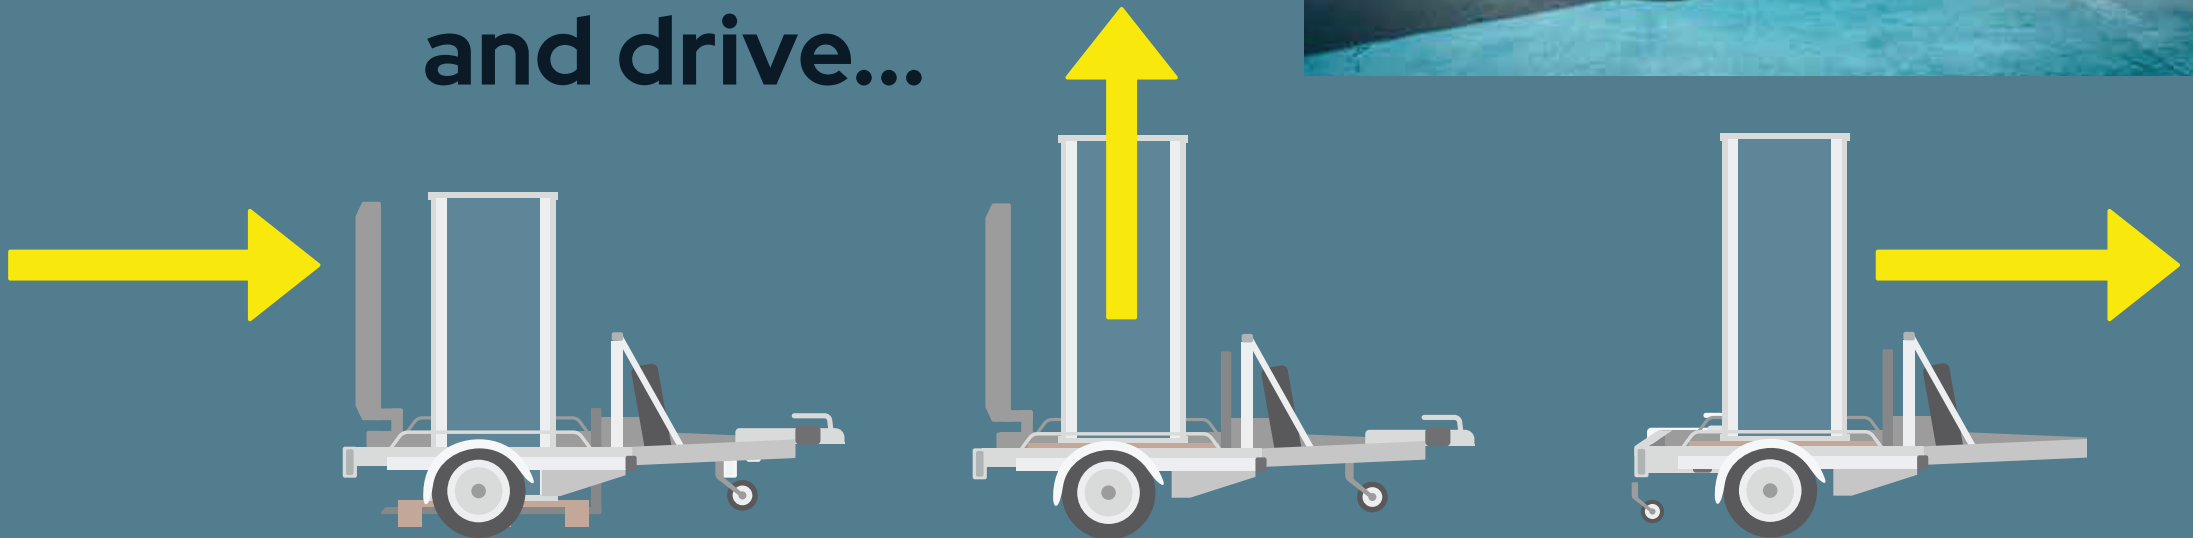

Easy to transport to site

Single & Double Trailers:

Our specially designed trailers for the Mobile Telescopic Mast are available in a single and double axle version. Use our lift eyes, forklift or specially designed trailer to transport and quickly and easily install the Mobile Telescopic Mast.

- Heavy support wheel
- Shock absorbers
- Wheel chocks
- Adjustable width forks
- Tie hooks and rails
- Hot dip galvanised chassis

Load, lift and drive...
