### Hotkey Commands

Hotkey commands are keystroke sequences that initiate computer/device functions and can be used to initiate KVM Switch functions. A hotkey command sequence must be initiated by the HK\_LCode (HotKey Leading Code), followed by 1-2 additional keystrokes. Successful hotkey command inputs result in a high-pitch beep. Unsuccessful hotkey command inputs result in a low-pitched beep.

#### Notes:

- All keystroke combinations must be entered in rapid succession.

- Press and release the indicated keys, unless otherwise specified.

### HK\_LCode

#### Option 1.1

- **Scr Lck + Scr Lck**

#### Option 1.2

To change the HK\_LCode:

- **HK\_LCode + H + Esc, Caps, or F12**
- Alternatively, press and hold the front **Host Selection Button** for PC2, until 2 beeps are emitted, then press the desired leading hotkey of Scr Lck, ESC, Caps, or F12
