-  Battery
-  Privacy

-  iTunes & App Store
-  Wallet & Apple Pay

-  Passwords & Accounts

- 2 Minutes
- 5 Minutes
- 10 Minutes
- 15 Minutes
- Never

1. Navigate to General Settings, then you'll see a symbol for the LAN <...>
2. Select this and you'll see the option for PoE Texas LAN, select it

You'll see your IPV4 IP address information. If it shows "Automatic", that means your getting a dynamically assigned IP address.

If you'd like to reconfigure the IP address, DNS, and HTTP Proxy settings, you can do that by selecting these options.

The most used option will be fixing your IP address by selecting the "Automatic" button.

For the other networks settings, we'd recommend talking to a service provider or give us a call: 512-479-0317 or [service@poetexas.com](mailto:service@poetexas.com).

# Best Practices for iOS Updates

Despite Apple's excellent reputation for ensuring backward compatibility with their iPads and iPhones, practical experience with a recent iOS update has revealed that even they can miss things which can temporarily lead to disruption of service for your device. If your device must be reliable 24/7, we recommend these following best practices:

- Go to Settings -> General -> Software Updates -> Automatic Updates
- Deselect "Install iPadOS Updates"
- Before choosing to install the next update, please check into our iOS Compatibility Table to check whether we have finished testing the performance of a new iPadOS version

## iOS Compatibility Table

- Finally, to get emailed live updates on iOS compatibility, subscribe to our mailing list for iOS compatibility

## Android (Samsung Tab and Google Pixel)

If you're using a Samsung Tab A model year after 2019, you may experience some difficulties establishing the wired data connection. Please contact [service@poetexas.com](mailto:service@poetexas.com) if you're experiencing compatibility issues with your Samsung device.

Otherwise, simply confirm the data by looking for the Ethernet symbol on the upper right. No configuration necessary.
