

Delock Ring Barcode Scanner 1D and 2D with 2.4 GHz or Bluetooth - Wireless Charging Function

Description

This ring barcode scanner by Delock can be wirelessly connected to a PC, laptop or directly to a mobile phone or tablet. All common **1D and 2D barcode types** can be precisely captured even at long distances. Additionally, the scanner recognizes barcodes displayed on displays and monitors.

Automatic adaptation to ambient brightness

The scanner automatically adapts to the ambient brightness and captures **up to 100 scans** per second under optimal lighting conditions.

In low ambient brightness, the barcode is illuminated by an additional white LED and can therefore also be used in poor lighting conditions.

Small and practical

This small ring scanner can be practically attached to the finger with the hook-and-loop fastener, so that the wearer has his hands free, for example in order to hold a cardboard box. Thanks to the rotation possibility, the scanner can be rotated and is thus suitable for both right- and left-handed people.

Transmission via Bluetooth, USB or 2.4 GHz

The data transfer of the scanned barcodes is done either via Bluetooth directly with the Bluetooth capable output device or via the 2.4 GHz frequency band using the included USB dongle. Alternatively, the scanner can be connected to the computer with the included USB cable.

Wireless Charging

The ring scanner can be charged either via the **USB Type-C™ port** or using the **inductive charging function** in the scanner itself. For example, with the Delock charging station 90608.
