Modern, scalable storage optimizes debt collection

“Standardizing on a single storage platform saves us time and money because our engineers don’t have to train on or troubleshoot multiple systems to keep our infrastructure operating at peak performance. This improvement alone allows us to accomplish even more with less.”

– **Bogdan Fortuna**, Senior System Network Administrator, KRUK S.A.

Life delivers its fair share of curveballs, and even the most financially prudent individuals can fall into debt. Luckily, KRUK S.A. has helped millions of people repay their debt and take control of their finances. To enable that, the IT team at KRUK needed to take control of their own IT infrastructure. When the time came to set up two new data centers, they turned to Hewlett Packard Enterprise to keep them competitive.

Solution:
Data

Industry:
Financial services

Country:
Poland

Objectives

- Simplify storage management
- Launch a new data center and disaster recovery data center
- Upgrade new data centers with the latest technology

Requirements

- Highly secure environment to help ensure customer privacy
- Reliable infrastructure to deliver high-quality services
- Optimized costs through consolidation

Solution

- HPE Alletra Storage MP
- HPE GreenLake for Block Storage

Key partners

- Betacom

Outcomes

- More data stored in less space, with faster access
- Can purchase only the needed capacity and scale on demand
- 100% data availability
- Time and money saved since engineers manage a single platform
