

## 

# 4×2 Matrix Switcher with USB Hub and HDBaseT Input

Application Programming Interface 1.0

## **Version Information**

Version	Release Date	Notes
1	Jun 2024	Initial release

#### Introduction

#### General

This document provides an alphabetical list of commands available for AT-OME-MS42-HDBT. Commands are case-sensitive. If the command fails or is entered incorrectly, then the feedback is "Command FAILED". Commands can be sent using RS-232, Telnet, SSH, or TCP. There should be a 500 millisecond delay between each command sent to the unit. The default port for Telnet is 23. TCP ports are 9000, 9001, 9002, and 9003.

**IMPORTANT:** Each command is terminated with a carriage-return (0x0d) and the feedback is terminated with a carriage-return and line-feed (0x0a).

#### **Ports**

This product can communicate directly with local and remote RS-232 (over HDBaseT) ports using a direct TCP socket connection. The default port assignment is from left-to-right, viewed from the rear panel. Refer to the table below for the port assignment for this product. For ports connected to RS-232 interfaces, no additional payload is required to transmit data to the device. All data sent to the respective TCP port will be sent bit-for-bit to the RS-232 output. Note that if feedback is required from the RS-232 device, the TCP socket must be kept open. This product does not provide buffer or queuing registers. Therefore, any data from the RS-232 port that is received while the TCP socket connection is closed, will be lost.

Port	Description
9000	MCU (similar to Telnet)
9001	HDBaseT Input
9002	HDBaseT Output
9003	Local RS-232

#### **Example:**

With the device IP address of 192.168.1.100 and a PJLINK projector connected to the RS-232 of the HDBaseT output.

1. Open a TCP socket to 192.168.1.100:9002 and send the following command string:

%1POWR 1\x0D

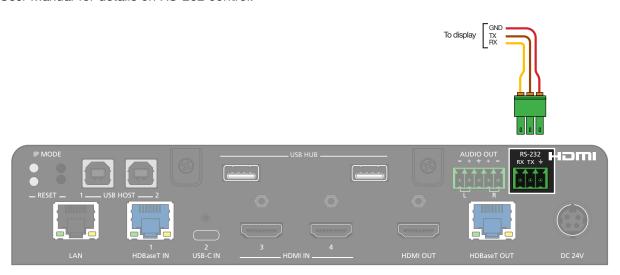

2. The projector will respond with the following, using the same socket connection:

\$1POWR=OK\x0D

#### **RS-232**

A 3-pin captive screw connector is included for RS-232, and should be wired as shown. Refer to the *AT-OME-MS42-HDBT User Manual* for details on RS-232 control.

**NOTE:** Typical DB9 connectors use pin 2 for TX, pin 3 for RX, and pin 5 for ground. On some devices functions of pins 2 and 3 are reversed.

The table below lists the default RS-232 settings for RS-232, HDBaseT IN, and HDBaseT OUT ports.

Default RS-232 Settings	
Baud rate	115200
Parity	N
Data bits	8
Stop bits	1

Command	Description
Blink	Enables or disables blinking of the <b>POWER</b> button on the front panel.
DispBtn	Simulates pressing the DISPLAY button on the front panel.
help	Displays a list of available help commands.
InputStatus	Displays the status for each input.
IP802.1x	Sets the security authentication type.
IPCFG	Displays IP address configuration.
IPDHCP	Turns DHCP on / off.
IPStatic	Sets a static IP address.
Lock	Locks the buttons on the front panel.
LRAUD	Enables or disables the analog audio output.
Mreset	Sets the unit back to default settings.
OutHdmi5vKeep	sets the +5V pin on the <b>HDMI OUT</b> port to the desired setting.
PWOFF	Execute this command to power-off the unit.
PWON	Execute this command to power-on the unit.
PWSTA	Displays the power state of the unit.
Reboot	Performs a soft reboot of the AT-OME-MS42-HDBT.
RS232zone	Triggers the unit to send the RS-232 command to the display connected to the HDBaseT receiver's RS-232 port.
Status	Displays the routing state of the unit.
Туре	Displays the model of the unit.
Unlock	Unlocks the buttons on the front panel.
USBHostLogic	Sets the USB mode of the unit.
USBHostRoute	Sets the routing state of the USB host.
UsbVbusControl	Toggle the setting for the USB Vbus.
Version	Displays the current firmware version of the unit.
VOUTMute	Mutes the output volume for the specified output.
xY\$	Mutes/Unmutes AV signals for the specified output channel.
xYAVxZ	Switches the specified input to the specified output.

#### **Blink**

Enables or disables blinking of the **POWER** LED indicator on the front panel. When set to on, the **POWER** indicator will flash blue, and can be used to physically identify the unit on a network. The **POWER** indicator will flash until the Blink off command is executed or the unit is rebooted. on = enables blinking; off = disables blinking; sta = displays the current setting. The default setting is off.

Syntax	
Blink X	

Parameter	Description	Range
X	Value	on, off, sta

Example	Feedback
Blink on	Blink on

#### **DispBtn**

This command emulates pressing the **DISPLAY** button on the front panel. This command can perform different functions, depending on which value it is assigned.

Syntax	
DispBtn X	

Parameter	Description	Range
X	State	on, off, tog, sta

Example	Feedback
DispBtn on	DispBtn on

#### help

Displays the list of available commands. To obtain help on a specific command, enter the **help** command followed by the name of the command.

Syntax	
help [X]	

Parameter	Description	Range
Χ	Command name (optional)	Command

<b>Example</b> help	Feedback Blink DispBtn System IPCFG IPStatic
	···

#### **InputStatus**

Displays the status of the inputs as either a 0 or 1. If a source is detected on the input, then a 1 will be displayed. Inputs with no source connected will display a 0.

Syntax	
InputStatus	

This command does not require any parameters

Example	Feedback
InputStatus	InputStatus 0100

#### IP802.1x

Sets the security setting for use with RADIUS server authentication. Use the sta argument to display the current setting.

Syntax	
IP802.1x X	

Parameter	Description	Range
X	Security setting	disable, PEAP, TTLS, TLS, sta

ExampleFeedbackIP802.1x TTLSIP802.1x TTLS

#### **IPCFG**

Displays the current network settings for the unit.

Syntax	l		
IPCFG			

This command does not require any parameters

**Example** Feedback

IPCFG IP Addr: 10.0.1.101 Netmask: 255.255.255.0

Gateway: 10.0.1.1
Telnet Port: 23

#### **IPDHCP**

Enables or disables DHCP mode on the unit. on = enables DHCP mode; off = disables DHCP and sets the unit to the defined Static IP mode; sta = displays the current setting. A static IP address must be configured for the unit first before disabling DHCP. Refer to the IPStatic command for more information.

Syntax	
IPDHCP X	

Parameter	Description	Range
Χ	Value	on, off, sta

ExampleFeedbackIPDHCP onIPDHCP on

#### **IPStatic**

Sets the static IP address, subnet mask, and gateway (router) address of the unit. Before using this command, DHCP must be disabled on the unit. Refer to the IPDHCP command for more information. Each argument must be entered in dot-decimal notation and separated by a space. The default static IP address is 192.168.1.254.

Syntax	
IPStatic X Y Z	

Parameter	Description	Range
X	IP address	0 255 (per byte)
Υ	Subnet mask	0 255 (per byte)
Z	Gateway (router)	0 255 (per byte)

Example

IPStatic 192.168.1.112 255.255.255.0 192.168.1.1

Feedback

IPStatic 192.168.1.112 255.255.255.0 192.168.1.1

#### Lock

Locks the buttons on the front panel. This feature is useful when the unit is installed in a rack environment or other remote location, to prevent unauthorized tampering or accidental pressing of the front-panel buttons. Also refer to the Unlock command.

Syntax	
Lock	

This command does not require any parameters

**Example**Lock

Lock

Lock

#### **LRAUD**

Enables or disables the analog audio output.

Syntax	
LRAUD X	

Parameter	Description	Range
Χ	State	on, off, sta

**Example**LRAUD on
LRAUD on

#### **Mreset**

Resets the unit to factory-default settings.

S	yntax	
M	Ireset	

This command does not require any parameters

**Example** Feedback Mreset Mreset

#### OutHdmi5vKeep

This option sets the +5V pin on the **HDMI OUT** port to the desired setting. This feature allows a display to go to sleep when there is no signal present. It's also used for VTC codecs that need to see a change in HDMI +5V in order to change modes. If faster switching times are desired, then this should be set to on. Use the sta argument to fetch the current setting.

Syntax	
OutHdmi5vKeep X	

Parameter	Description	Range
Χ	Value	on, off, sta

ExampleFeedbackOutHdmi5vKeep onOutHdmi5vKeep on

#### **PWOFF**

Executing this command will power-off the unit. Execute the PWON command to power-on the unit.

Syntax	
PWOFF	

This command does not require any parameters

**Example**PWOFF

Feedback
PWOFF

#### **PWON**

Executing this command will power-on the unit. Use the PWOFF command to power-off the unit.

Syntax PWON

This command does not require any parameters

**Example**PWON

Feedback
PWON

#### **PWSTA**

Displays the current power state of the unit.

Syntax
PWSTA

This command does not require any parameters

**Example**PWSTA

Feedback
PWON

#### Reboot

Performs a soft reboot of the AT-OME-MS42-HDBT. All system settings are preserved.

Syntax Reboot

This command does not require any parameters

**Example**Reboot
Reboot
Reboot

#### RS232zone

Sends commands to the HDBaseT device. Refer to the User Manual of the display device for a list of available commands. Brackets must be used when specifying the command argument. Note that this command has been deprecated and is for legacy use. It is recommended to use the TCP socket functionality, under Ports (page 3).

Syntax	
RS232zone[X]	

Parameter	Description	Range
Χ	Command	String

ExampleFeedbackRS232zone[test]RS232zone[test]

#### **Status**

Displays which input is routed to which output. Refer to the xYAVxZ command for more information.

Syntax	
Status	

This command does not require any parameters

ExampleFeedbackStatusx2AVx1,x2AVx2

#### **Type**

Displays the model information of the unit.

Syntax	
Туре	

This command does not require any parameters

ExampleFeedbackTypeAT-OME-MS42-HDBT

#### **Unlock**

Unlocks the buttons on the front panel. Also refer to the Lock command.

Syntax	
Unlock	

This command does not require any parameters

**Example**Unlock

Feedback
Unlock

#### **USBHostLogic**

Sets the USB mode for the AT-OME-MS42-HDBT. Use the sta argument to display the current setting.

Syntax
USBHostLogic X

Parameter	Description	Range
Χ	Mode	follow usb, follow video, manual, sta

ExampleFeedbackUSBHostLogic follow videoUSBHostLogic follow video

#### **USBHostRoute**

Sets the routing state of the USB host. C = USB-C port, 1 = USB Host 1, 2 = USB Host 2, 3 = remote USB host connected over HDBaseT OUT. Use the sta argument to display the current setting.

Syntax
USBHostRoute X

Parameter	Description	Range
Χ	Port	C, 14, sta

ExampleFeedbackUSBHostRoute CUSBHostRoute C

#### **UsbVbusControl**

This feature provides the ability to toggle the USB Vbus. This allows the USB hub port to always provide power or follow the presence of the connected USB host. Use the sta argument to display the current setting.

Syntax
UsbVbusControl X

Parameter	Description	Range
Χ	State	on, off, sta

**Example**UsbVbusControl on

**Feedback** 

UsbVbusControl on

#### **Version**

Displays the current firmware version of the unit.

Syntax
Version

This command does not require any parameters

**Example Feedback** Version 1.0.05

#### **VOUTMute**

Mutes / unmutes the output volume for the specified output. The first argument references the output: 1 = HDMI, 2 = HDBaseT. Do not include a space between the command and the first argument. Use the sta argument to display the current setting.

Syntax	
VOUTMuteX Y	

Parameter	Description	Range
Χ	Output	1, 2
Υ	State	on, off, sta

ExampleFeedbackVOUTMute2 offVOUTMute2 off

#### xY\$

Enables / disables video for the specified output. The first argument references the output: 1 = HDMI, 2 = HDBaseT. The second argument enables or disables the video output. on = enable video; off = disable video. Use the sta argument to display the current setting.

Syntax	
xY\$ Z	

Parameter	Description	Range
Υ	Output	1, 2
Z	State	on, off, sta

Example	Feedback
x2\$ off	x2\$ off

#### **xYAVxZ**

Switches the specified input to the specified output. The first argument references the input: 1 = USB-C, 2 = DisplayPort, 3 = HDMI 1, and 4 = HDMI 2. If the system is in matrix mode, then 1 or 2 can be specified as output flags.

Syntax
xYAVxZ

Parameter	Description	Range
Υ	Input	1 4
Z	Output	1, 2

Example	Feedback
x3AVx1	x3AVx1. x3AVx2
