

"C" type socket on the front and rear
 HDMI 4K @ 30 Hz
 USB 3.2
 Active circuit boosts signals

This module is part of Vision's Techconnect connectivity faceplate family. It allows technology users to use just one USB-C cable to connect their laptop to the AV faceplate.

This module supports 4K video, USB, and charging. Use this module with Vision's USB-C cables for best results.

Fixes to Surround

Techconnect modules fix into a surround, which in turn fixes to a backbox, mudring (for hollow walls), or a table faceplate.

Future-proof

If you break a module or need to change it in the future, just replace that part - not the entire faceplate.

Flexible

Get to site and the client changes what they want on their AV faceplate? No problem.

4K 30 Hz

Future-proof the installation by using high resolution components. It supports 4K at 30Hz with input and output cables dependent on quality of cables.

Proven

For over 15 years Techconnect has improved and developed into one of the most popular AV faceplates in the world.

USB 3.2

The USB 3.2 interface on the rear is designed and tested to work with all interactive displays and projectors.

Test LED

The cable that connects to the front of the module is designed to fit in only one direction—it's not reversible. To ensure you've plugged it in correctly, a light indicator is provided.
