E2725HM

Simplified Service Manual

Notes, cautions, and warnings

 **NOTE:** A NOTE indicates important information that helps you make better use of your product.

 **CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

 **WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

Safety Instructions

Use the following safety guidelines to protect your monitor from potential damage and to ensure your personal safety. Unless otherwise noted, each procedure in this document assumes that you have read the safety information that shipped with your monitor.

NOTE: Before using the monitor, read the safety information that is shipped with your monitor and printed on the product. Keep the documentation at a secure location for future reference.

WARNING: Use of controls, adjustments, or procedures other than those specified in this documentation may result in exposure to shock, electrical hazards, and/or mechanical hazards.

CAUTION: The possible long-term effect of listening to audio at high volume through headphones (on a monitor that supports it) may cause damage to your hearing ability.

- Place the monitor on a solid surface and handle it carefully. The screen is fragile and can be damaged if dropped or pressed with a sharp object.
- Ensure that your monitor is electrically rated to operate with the AC power available in your location.
- Keep the monitor at room temperature. Excessive cold or hot conditions can have an adverse effect on the liquid crystal of the display.

Connect the power cable from the monitor to a wall outlet that is near and accessible. See [Connecting your monitor](#).

- Do not place or use the monitor on a wet surface or near water.
- Do not subject the monitor to severe vibration or high-impact conditions. For example, do not place the monitor inside a car trunk.
- Unplug the monitor when it is going to be left unused for an extended period.
- To avoid electric shock, do not attempt to remove any cover or touch the inside of the monitor.
- Read these instructions carefully. Keep this document for future reference. Follow all warnings and instructions that are marked on the product.
- Certain monitors can be wall-mounted using the VESA mount that is sold separately. Ensure to use the correct VESA specifications as mentioned in the wall mounting section of the User's Guide.

For information about safety instructions, see the Safety, Environmental, and Regulatory Information (SERI) document that is shipped with your monitor.

Before working inside your monitor

Steps

1. Save and close all open files and exit all open applications.
 2. Turn off your monitor.
 3. Disconnect your monitor and all attached devices from their electrical outlets.
 4. Disconnect all attached network devices and peripherals, such as keyboard, mouse, and dock from your monitor.
- CAUTION:** To disconnect a network cable, first unplug the cable from your monitor and then unplug the cable from the network device.
5. Remove any media card and optical disc from your monitor, if applicable.

After working inside your monitor

CAUTION: Leaving stray or loose screws inside your monitor may severely damage your monitor.

Steps

1. Replace all screws and ensure that no stray screws remain inside your monitor.
2. Connect any external devices, peripherals, or cables you removed before working on your monitor.
3. Replace any media cards, discs, or any other parts that you removed before working on your monitor.
4. Connect your monitor and all attached devices to their electrical outlets.
5. Turn on your monitor.

Connecting your monitor

⚠ WARNING: Before you begin any of the procedures in this section, follow the [Safety Instructions](#).

ⓘ NOTE: Dell monitors are designed to work optimally with the video cables that are shipped with your monitor. Dell cannot guarantee the video performance of cables that are not included with your Dell monitor, as it has no control over suppliers, materials, connectors, and manufacturing processes.

ⓘ NOTE: Route the cables through the cable-management slot before connecting them.

ⓘ NOTE: Do not connect all cables to the computer simultaneously.

ⓘ NOTE: The images are for illustration only. The appearance of the computer may vary.

To connect your monitor to the computer:

1. Turn off your computer and disconnect the power cable.
2. Connect the VGA cable or DP cable or HDMI cable from your monitor to the computer.

Connecting the VGA Cable

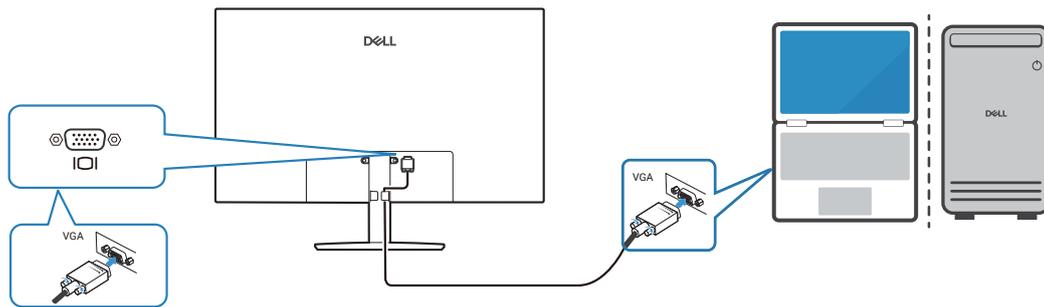

Figure 7. Connecting the VGA Cable

Connecting the HDMI Cable

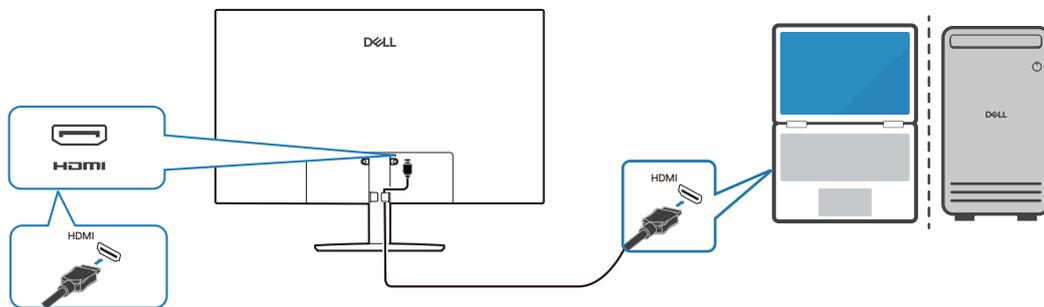

Figure 8. Connecting the HDMI Cable

Connecting the DisplayPort Cable

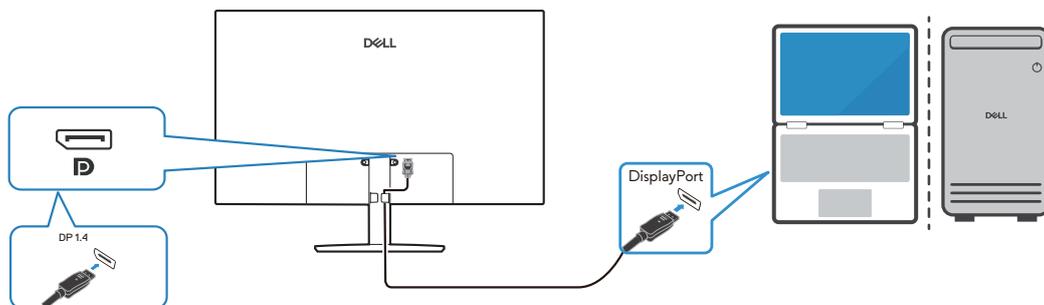

Figure 9. Connecting the DisplayPort Cable

Disassembly and reassembly

⚠ CAUTION: The information in this section is intended for authorized service technicians in the EMEA region. Dell prohibits users from disassembling the monitor, and any damage that is caused by unauthorized servicing will not be covered under the warranty.

Recommended tools

1. Screwdriver (Phillips-head, Hexagonal head)
2. Penknife

Screw list

i NOTE: When removing screws from a component, it is recommended to note the screw type, the quantity of screws, and then place them in a screw storage box. This is to ensure that the correct number of screws and correct screw type is restored when the component is replaced.

i NOTE: Some computers have magnetic surfaces. Ensure that the screws are not left attached to such surfaces when replacing a component.

i NOTE: Screw color may vary with the configuration ordered.

Table 7. Screw list.

Component	Screw type	Quantity	Screw images
Back cover	M4x10	4	
	M3x4	2	
Metal shield	M3x4	2	
	M3x2.5	2	
	4-40unc	2	
System board and Power board	M3x7	3	
Power board	M4x8	1	
Middle frame	M3x4	13	
	M3x5	1	
Keypad board	M2x2	3	

Stand

Removing the stand

Prerequisites

1. Follow the procedure in [Before working inside your monitor.](#)

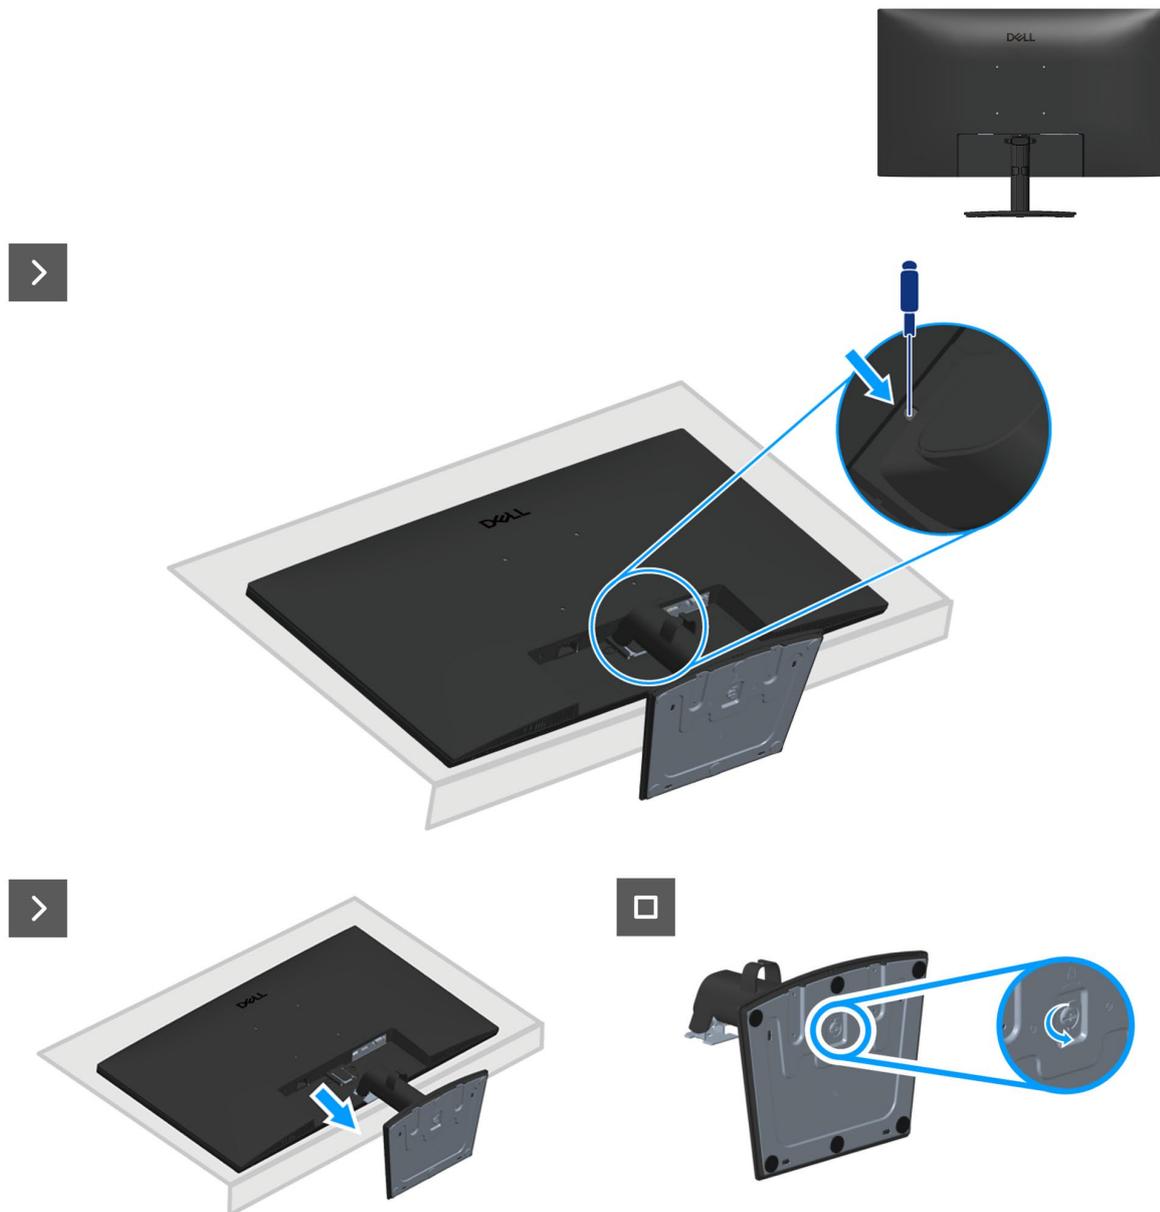

Figure 10. Removing the stand

Steps

1. Place the monitor on a clean, flat surface on a soft cloth or cushion.
2. Using a long screwdriver, press the release button.
3. While keeping the release button pressed, pull the stand out.
4. Open the screw handle at the bottom of the stand base and turn it anticlockwise to disassemble the stand.

Installing the stand

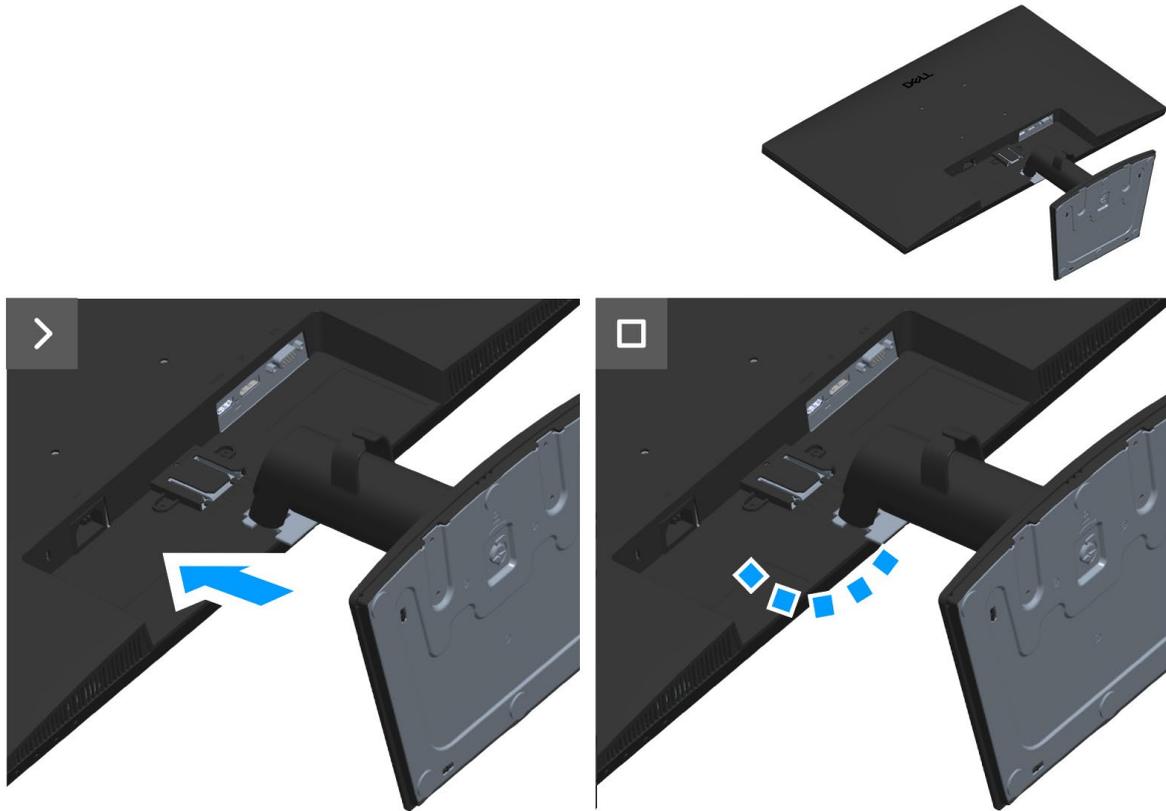

Figure 11. Installing the stand

Steps

1. Slide the tabs on the stand assembly into the slots on the monitor and press the stand assembly down to snap it into place.

Next steps

Follow the procedure in [After working inside your monitor.](#)

Back cover

Removing the back cover

Prerequisites

1. Follow the procedure in [Before working inside your monitor.](#)
2. Remove the [stand.](#)

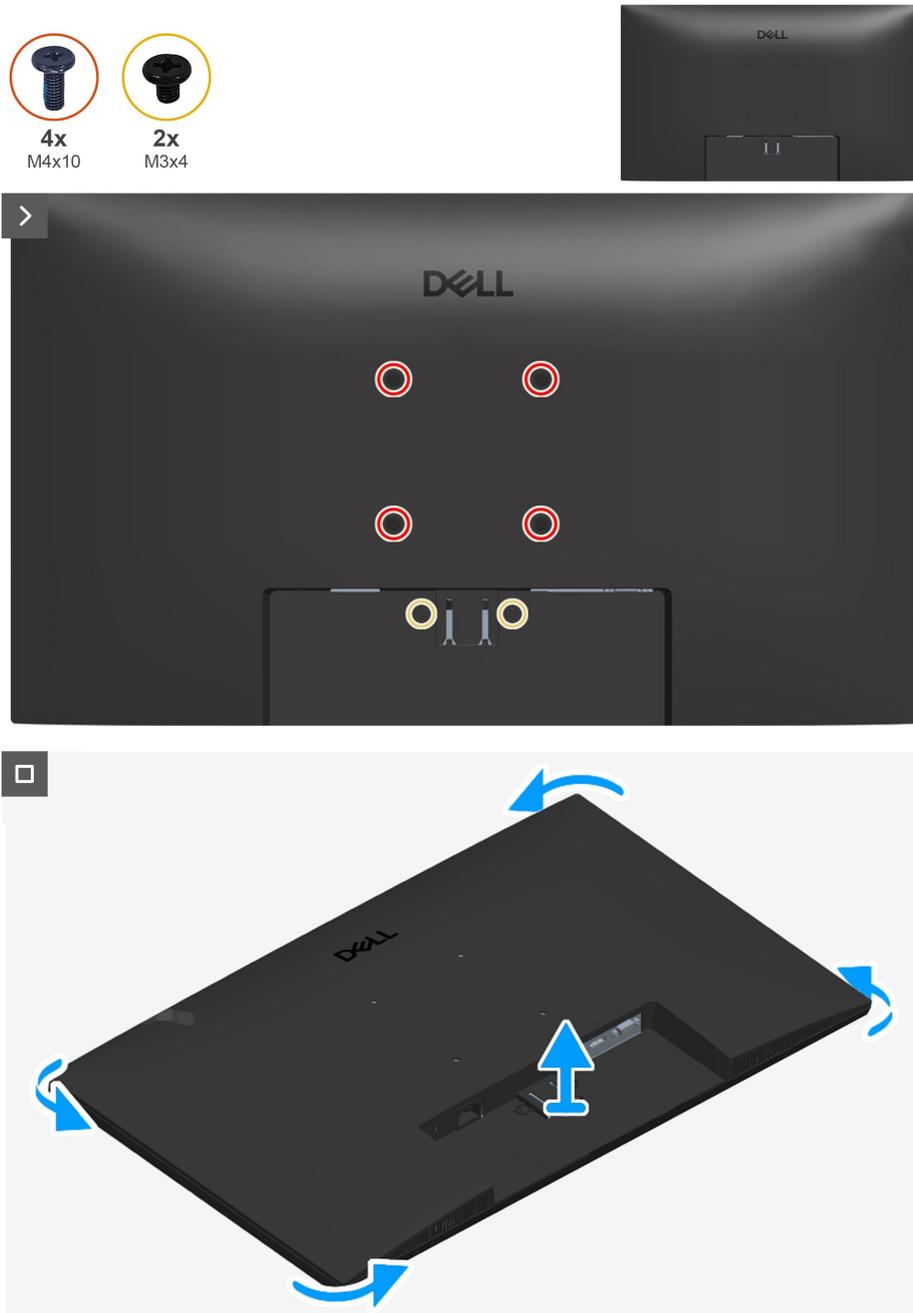

Figure 12. Removing the back cover

Steps

1. Remove the four screws (M4x10) and the two screws (M3x4) that secure the back cover to the chassis assembly.
2. Using the plastic scribe, pry the back cover starting from the bottom edge of the monitor.
3. Lift and remove the back cover from the monitor.

Installing the back cover

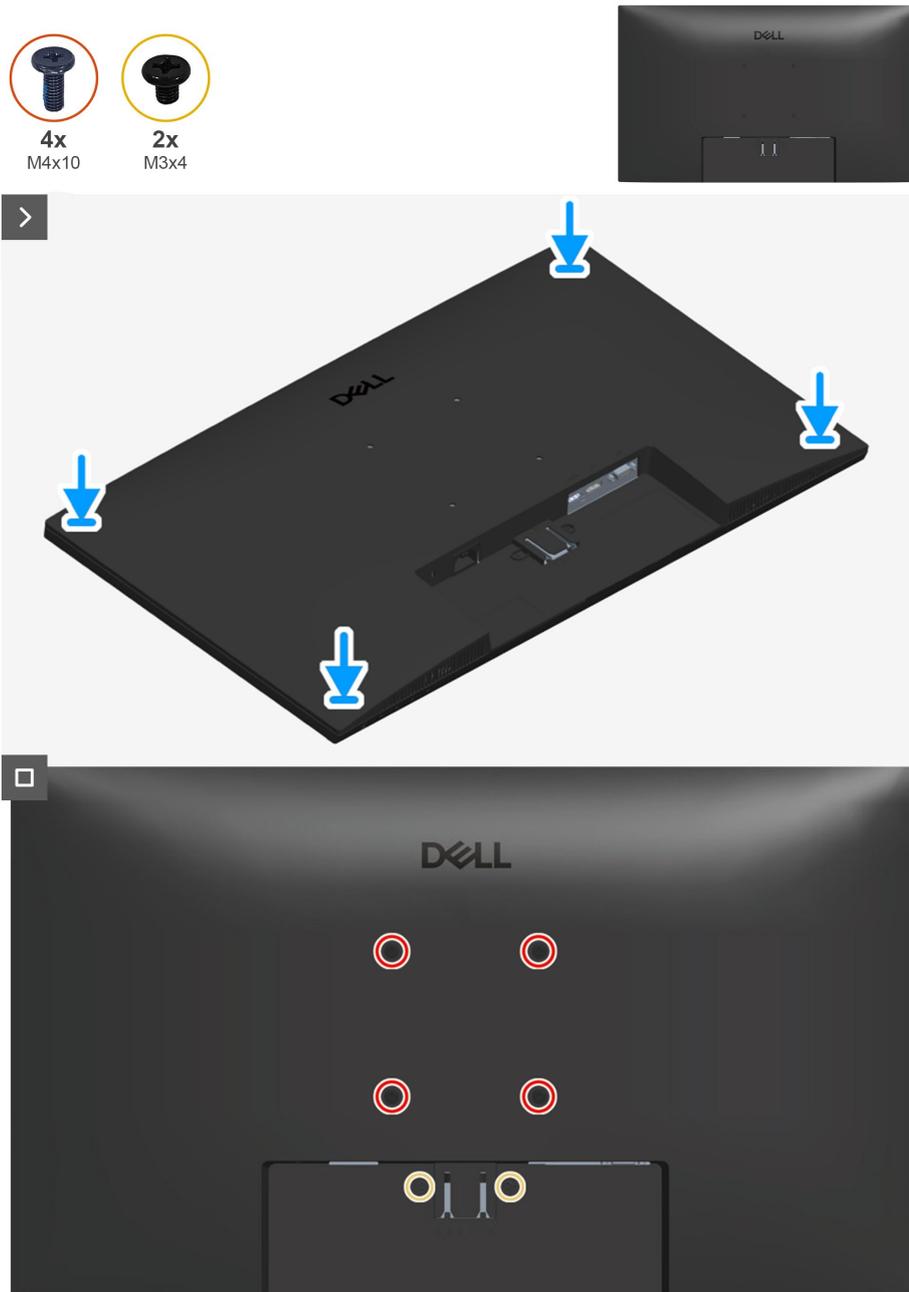

Figure 13. Installing the back cover

Steps

1. Align the screw holes on the back cover with the screw holes on the monitor, and gently press along the sides to snap the back cover into place.
2. Replace the four screws (M4x10) and the two screws (M3x4) to secure the back cover to the monitor.

Next steps

1. Install the [stand](#).
2. Follow the procedure in [After working inside your monitor](#).

Middle frame

Removing the middle frame

Prerequisites

1. Follow the procedure in [Before working inside your monitor.](#)
2. Remove the [stand.](#)
3. Remove the [back cover.](#)

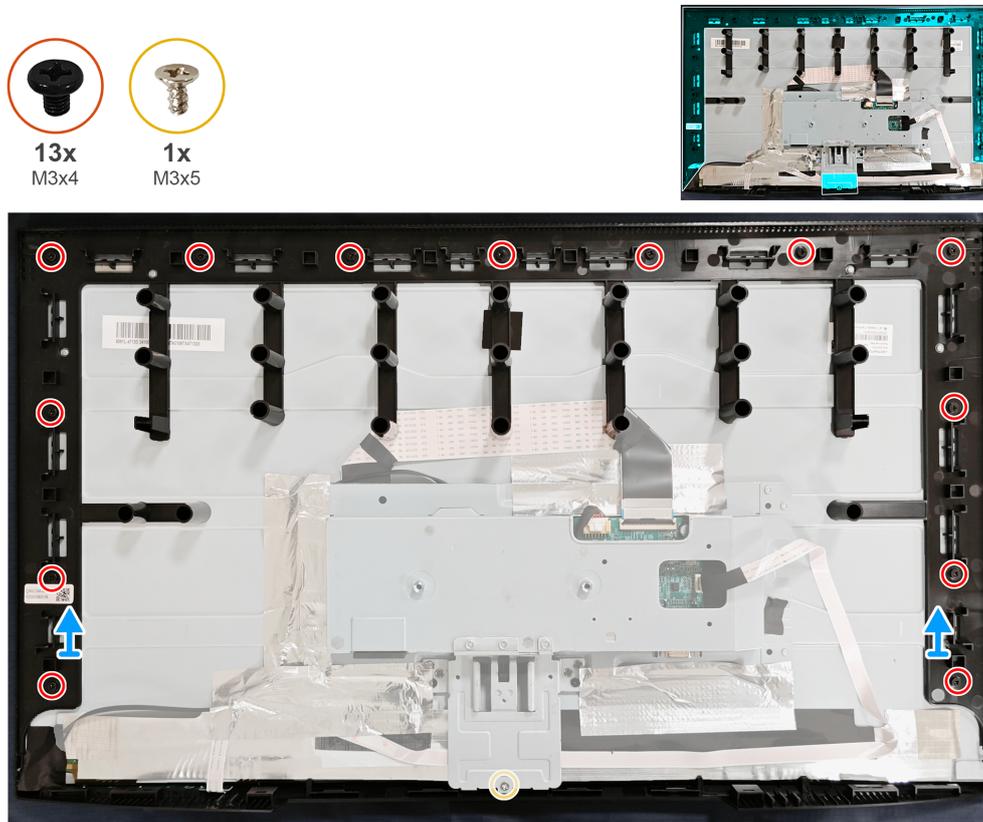

Figure 14. Removing the middle frame

Steps

1. Remove the thirteen screws (M3x4) on the middle frame.
2. Remove the screw (M3x5) on the underside of the middle frame.
3. Lift and remove the middle frame from the display panel.

Installing the middle frame

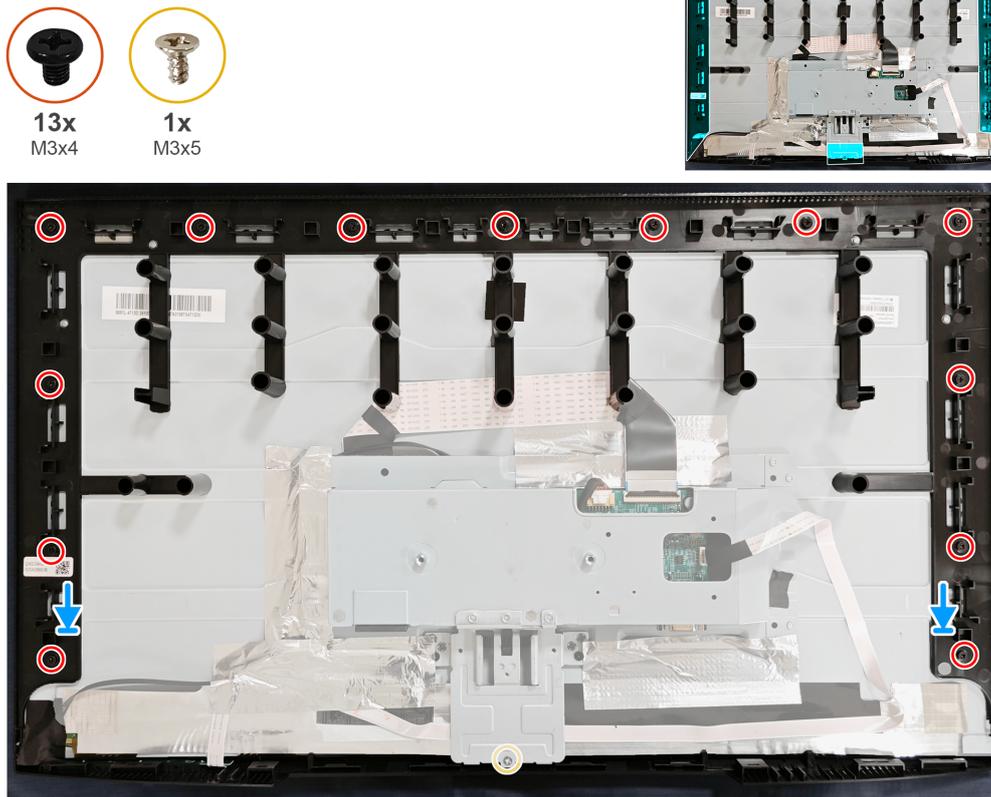

Figure 15. Installing the middle frame

Steps

1. Align the screw holes on the middle frame with the holes on the display panel and place it down.
2. Replace the thirteen screws (M3x4) on the middle frame.
3. Replace the screw (M3x5) on the underside of the middle frame.

Next steps

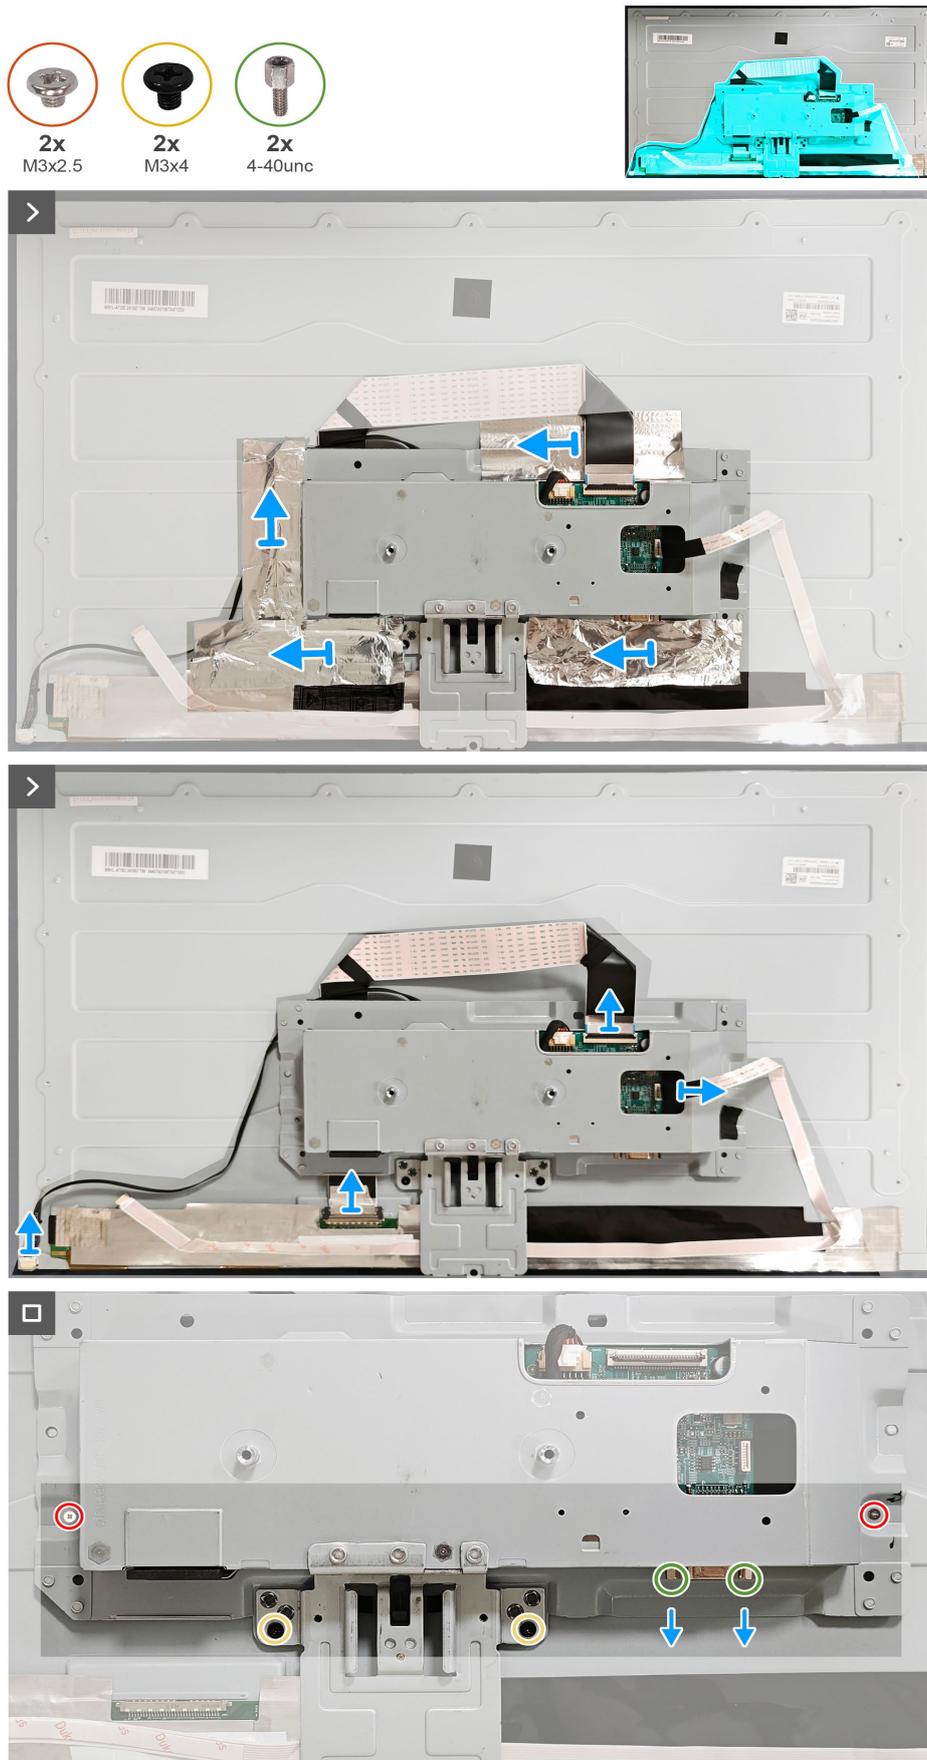

1. Install the [back cover](#).
2. Install the [stand](#).
3. Follow the procedure in [After working inside your monitor](#).

Metal shield

Removing the metal shield

Prerequisites

1. Follow the procedure in [Before working inside your monitor](#).
2. Remove the [stand](#).
3. Remove the [back cover](#).
4. Remove the [middle frame](#).

Steps

1. Remove the four tapes on the metal shield.
2. Disconnect lightbar cable, LVDS cable and keypad cable on the connector of the panel and main board.
3. Remove the two screws (M3x2.5) and two screws (M3x4) that secure the metal shield to the panel.
4. Remove the two screws (4-40unc) that secure the VGA port to the metal shield.

Installing the metal shield

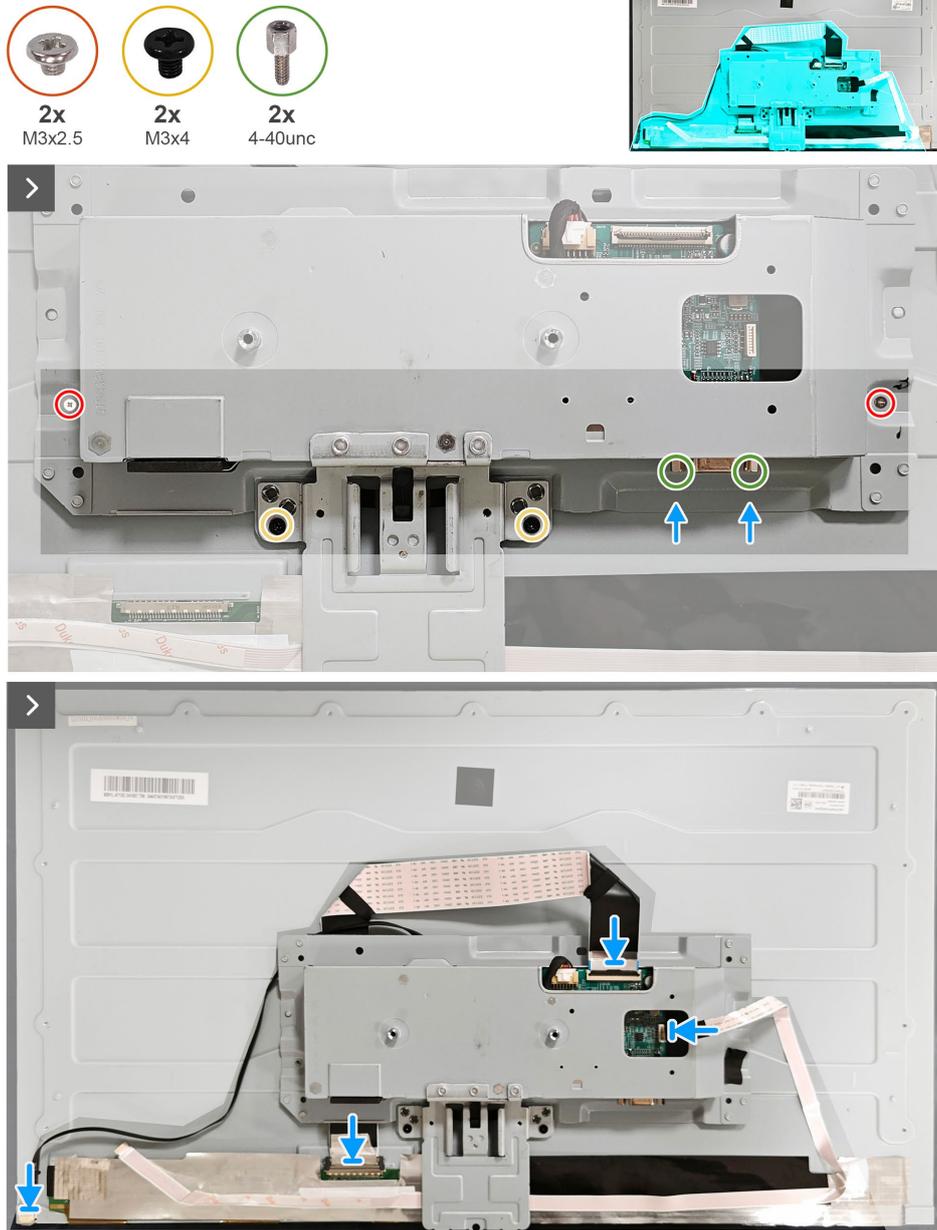

Figure 17. Installing the metal shield

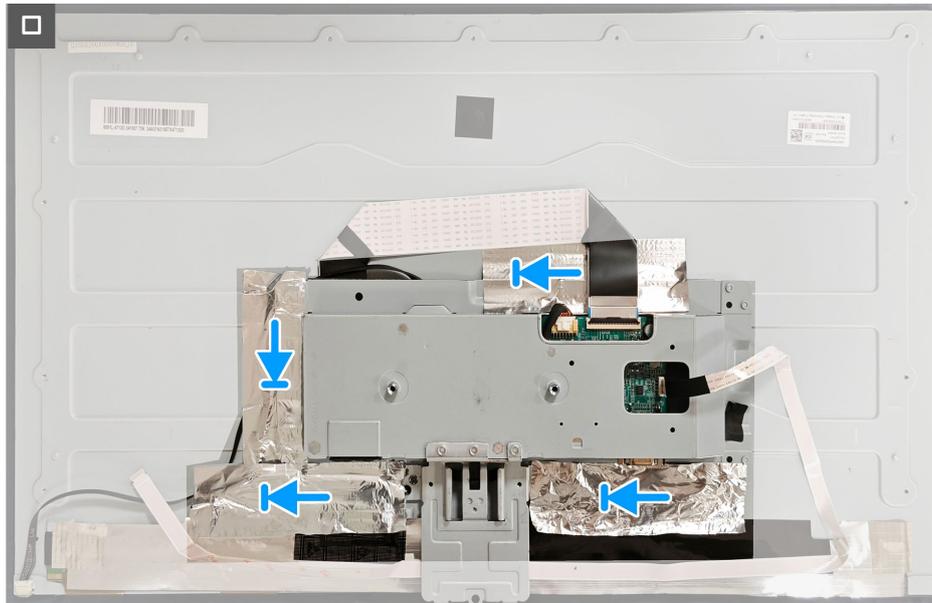

Figure 18. Installing the metal shield

Steps

1. Replace the two screws (M3x2.5) and two screws (M3x4) on the metal shield.
2. Replace the two screws (4-40unc) on the VGA port.
3. Connect lightbar cable, LVDS cable and keypad cable to the connectors of the panel and main board.
4. Replace the four tapes on the metal frame.

Next steps

1. Install the [middle frame](#).
2. Install the [back cover](#).
3. Install the [stand](#).
4. Follow the procedure in [After working inside your monitor](#).

Keypad board

Removing the keypad board

Prerequisites

1. Follow the procedure in [Before working inside your monitor](#).
2. Remove the [stand](#).
3. Remove the [back cover](#).
4. Remove the [middle frame](#).

Figure 19. Removing the keypad board

Steps

1. Remove the three screws (M2x2) on the keypad board on the underside of middle frame.
2. Disconnect keypad board cable from the connector on the keypad board.

Installing the keypad board

3x
M2x2

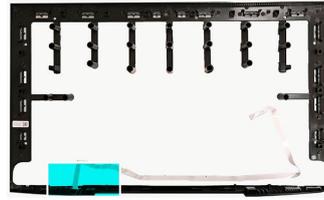

Figure 20. Installing the keypad board

Steps

1. Connect keypad board cable to the connector on the keypad board.
2. Replace the three screws (M2x2) to secure the keypad board to the middle frame.

Next steps

1. Install the [middle frame](#).
2. Install the [back cover](#).
3. Install the [stand](#).
4. Follow the procedure in [After working inside your monitor](#).

System board and power board

Removing the system board and power board

Prerequisites

1. Follow the procedure in [Before working inside your monitor](#).
2. Remove the [stand](#).
3. Remove the [back cover](#).
4. Remove the [middle frame](#).
5. Remove the [metal shield](#).

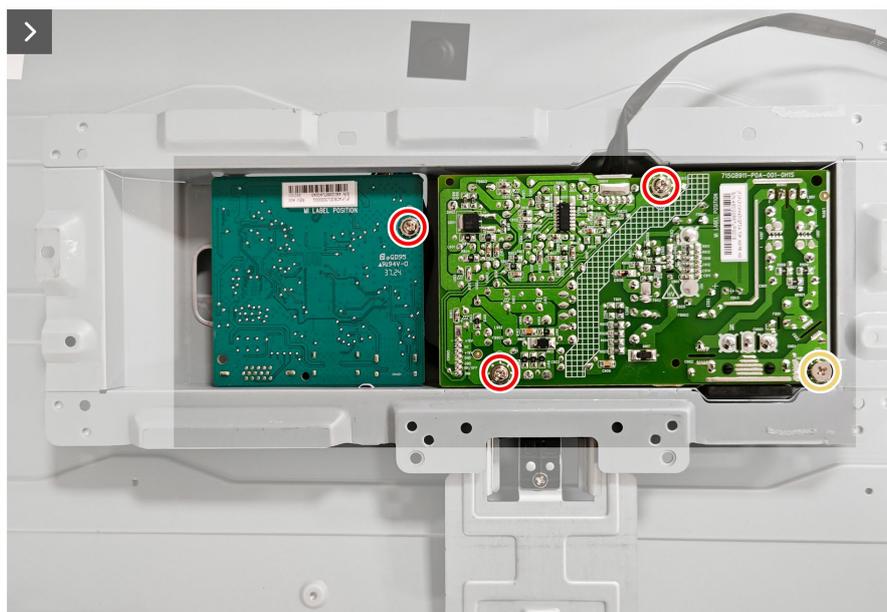

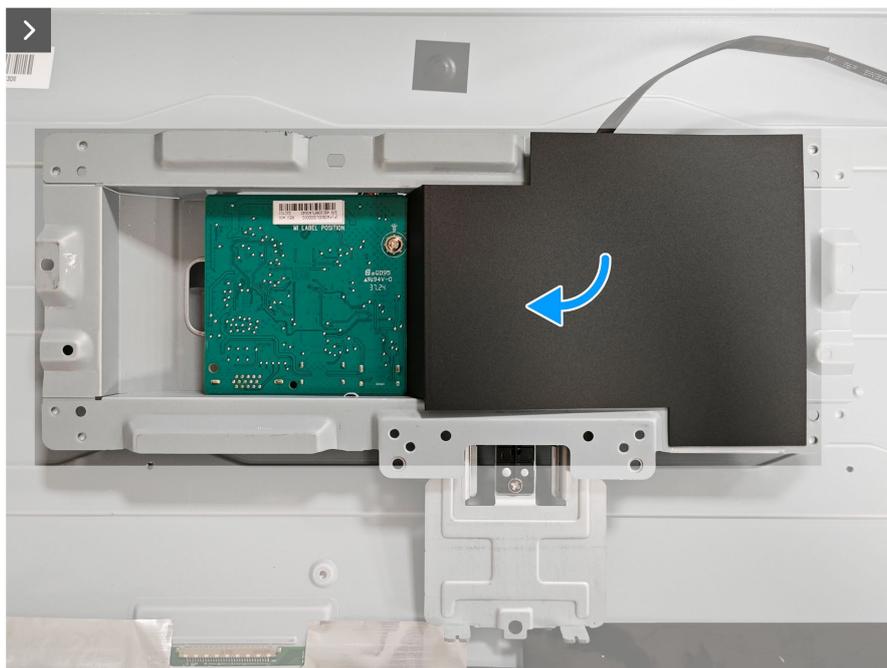

Figure 21. Removing the system board and power board

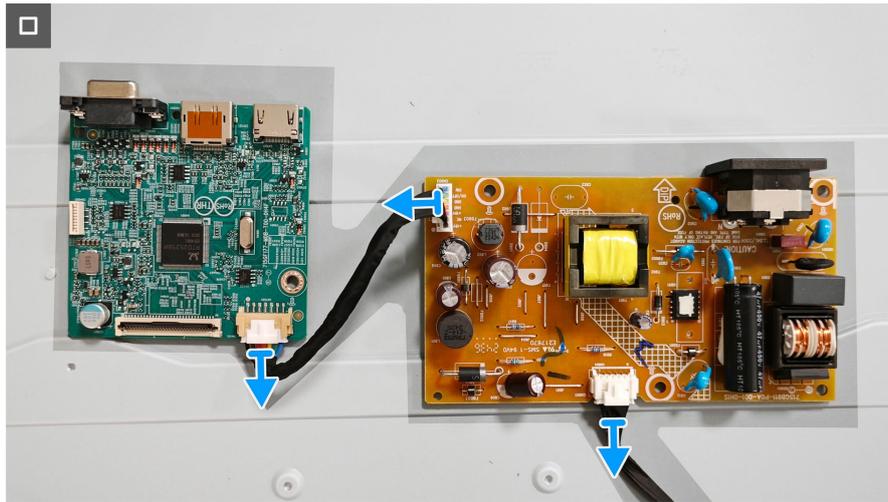

Figure 22. Removing the system board and power board

Steps

1. Remove the mylar tape on the power board.
2. Remove the screw (M3x7) that secures the system board to the chassis.
3. Remove the two screws (M3x7) and the screw (M4x8) that secures the power board to the chassis.
4. Disconnect the two power cables from the connectors on the system board and the power board.

Installing the system board and power board

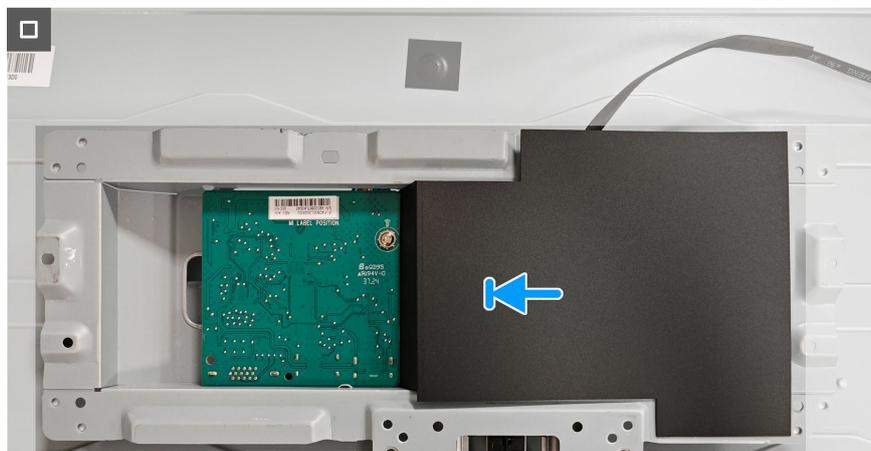

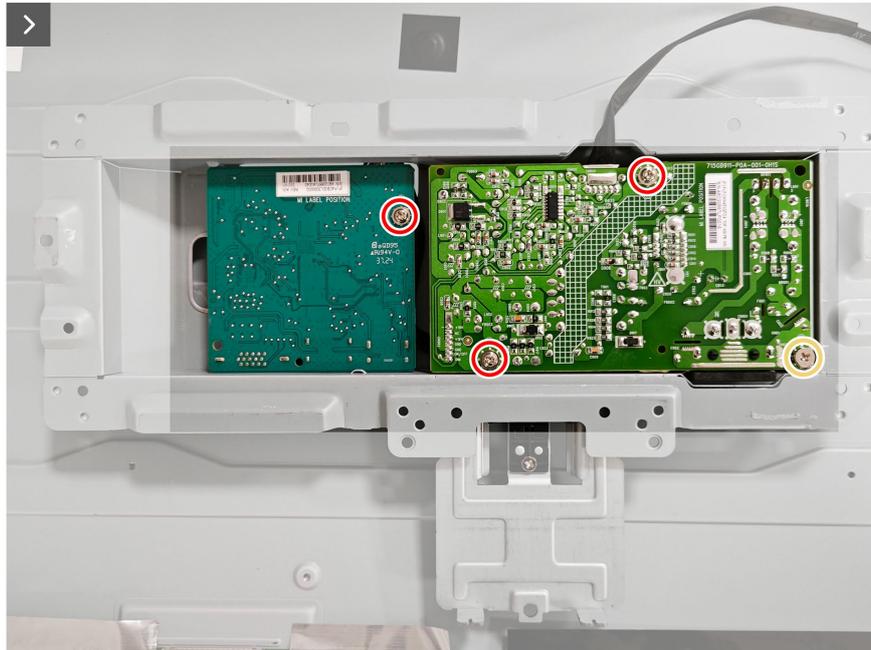

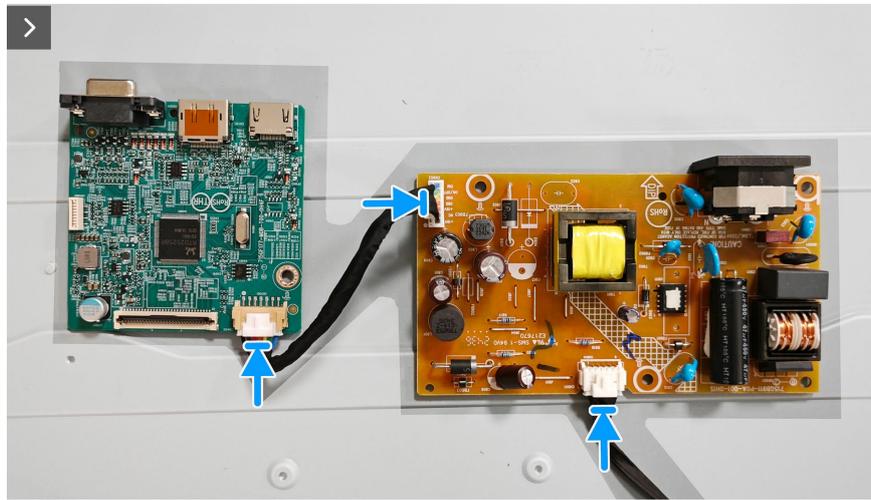

Figure 23. Installing the system board and power board

Steps

1. Replace the two power cables to the connectors on the system board and the power board.
2. Replace the screw (M3x7) on the power board to the chassis.
3. Replace the two screws (M3x7) and the screw (M4x8) on the system board to the chassis.
4. Adhere the mylar tape the power board.

Next steps

1. Install the [metal shield](#).
1. Install the [middle frame](#).
2. Install the [back cover](#).
3. Install the [stand](#).
4. Follow the procedure in [After working inside your monitor](#).

Troubleshooting

⚠ WARNING: Before you begin any of the procedures in this section, follow the [Safety Instructions](#).

Self-Test

Your monitor provides a self-test feature that allows you to check if your monitor is functioning properly. If your monitor and computer are properly connected but the monitor screen remains dark, run the monitor self-test by performing the following steps:

1. Turn off both your computer and the monitor.
2. Disconnect all video cables from the monitor. This way, the computer does not have to be involved.
3. Turn on the monitor.

If the monitor is working correctly, it detects that there is no signal and one of the following messages appears. While in self-test mode, the power LED remains white.

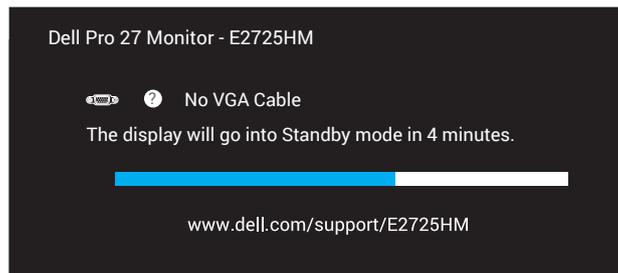

Figure 24. The message of no VGA cable

Or

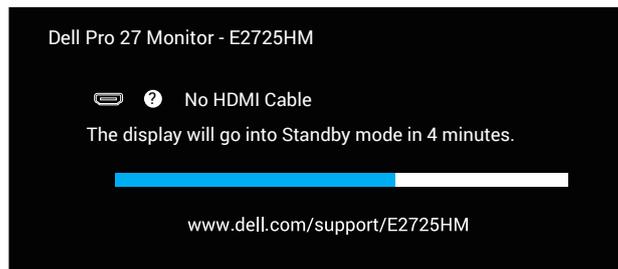

Figure 25. The message of no HDMI cable

Or

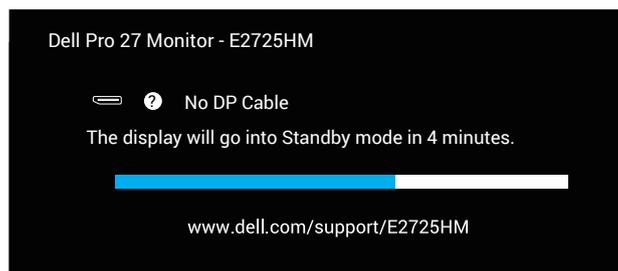

Figure 26. The message of no DP cable

(i) NOTE: This dialog box also appears on the monitor screen, if the video cable is disconnected or damaged.

4. Turn Off your monitor and reconnect the video cable; then turn on your computer and the monitor.

If your monitor remains dark after you reconnect the cables, check your video controller and computer.

Onboard diagnostics

Your monitor has an onboard diagnostic tool that helps you determine if any screen abnormality you experience is an inherent problem with your monitor, or with your computer and video card.

NOTE: You can run the onboard diagnostics only when the video cable is unplugged and the monitor is in self-test mode.

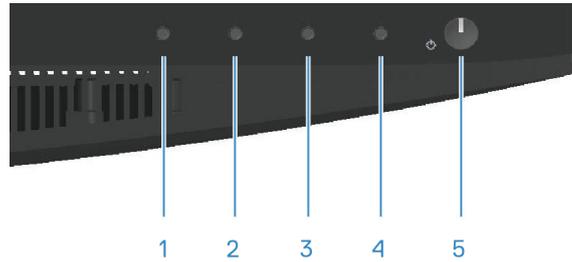

Figure 27. Control buttons

To run the onboard diagnostics:

1. Ensure that the screen is clean (no dust particles on the surface of the screen).
2. Unplug the video cables from the back of the computer or monitor. The monitor then goes into the self-test mode.
3. Press and hold the Exit button (button 4) for four seconds to enter the OSD lock/unlock menu.

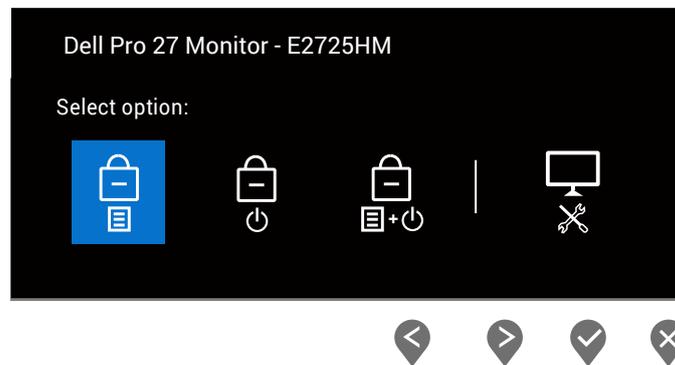

Figure 28. The message of locking the control buttons

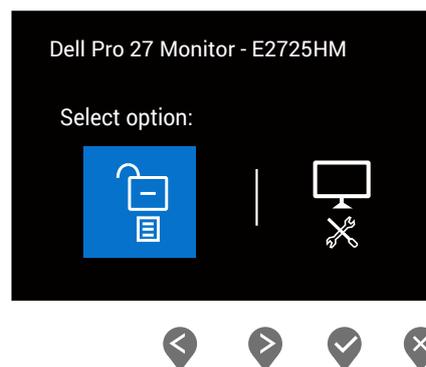

Figure 29. The message of unlock the buttons

4. Select the  icon to run the onboard diagnostics.
5. Carefully inspect the screen for abnormalities.
6. Press the Up button (button 1) on the back cover again. The color of the screen changes to gray.
7. Inspect the display for any abnormalities.
8. Repeat steps 6 and 7 to inspect the display in red, green, blue, black, white, and text pattern screens.

The test is completed when the text pattern screen appears. To exit, press the Up button (button 1) again.

If you do not detect any screen abnormalities upon using the onboard diagnostic tool, the monitor is functioning properly. Check the video card and computer.

Common problems

The following table contains general information about common monitor problems that you might encounter and the possible solutions:

Table 8. Common problems

Common Symptoms	Possible Solutions
No video/power LED off	<p>Ensure that the video cable connecting the monitor and the computer is properly connected and secure.</p> <p>Verify that the power outlet is functioning properly using any other electrical equipment.</p> <p>Ensure that the power button is pressed.</p> <p>Ensure that the correct input source is selected through the Input Source menu.</p>
No video/power LED on	<p>Increase brightness and contrast controls using the OSD.</p> <p>Perform monitor self-test feature check.</p> <p>Check for bent or broken pins in the video cable connector.</p> <p>Run the onboard diagnostics.</p> <p>Ensure that the correct input source is selected through the Input Source menu.</p>
Poor focus	<p>Eliminate video extension cables.</p> <p>Reset the monitor to factory settings (Factory Reset).</p> <p>Change the video resolution to the correct aspect ratio.</p>
Shaky or jittery video	<p>Reset the monitor to factory settings (Factory Reset).</p> <p>Check environmental factors.</p> <p>Relocate the monitor and test in another room.</p>
Missing pixels	<p>Cycle power On-Off.</p> <p>A pixel that is permanently Off is a natural defect that can occur in LCD technology.</p> <p>For more information about Dell Monitor Quality and Pixel Policy, see Dell Support site at: Dell Display Pixel Guidelines.</p>
Stuck-on pixels	<p>Cycle power On-Off.</p> <p>A pixel that is permanently off is a natural defect that can occur in LCD technology.</p> <p>For more information about Dell Monitor Quality and Pixel Policy, see Dell Support site at: Dell Display Pixel Guidelines.</p>
Brightness problems	<p>Reset the monitor to factory settings (Factory Reset).</p> <p>Adjust brightness and contrast controls through OSD.</p>
Geometric distortion	<p>Reset the monitor to factory settings (Factory Reset).</p> <p>Adjust horizontal and vertical controls through OSD.</p>
Horizontal or vertical lines	<p>Reset the monitor to factory settings (Factory Reset).</p> <p>Perform monitor self-test feature check and determine if these lines are also in self-test mode.</p> <p>Check for bent or broken pins in the video cable connector.</p> <p>Run the onboard diagnostics.</p>
Synchronization problems	<p>Reset the monitor to factory settings (Factory Reset).</p> <p>Perform a monitor self-test feature check to determine if the scrambled screen appears in self-test mode.</p> <p>Check for bent or broken pins in the video cable connector.</p> <p>Restart the computer in the safe mode.</p>

Common Symptoms	Possible Solutions
Safety-related issues	Do not perform any troubleshooting steps. Contact Dell immediately.
Intermittent problems	Ensure that the video cable connecting the monitor to the computer is connected properly and is secure. Reset the monitor to factory settings (Factory Reset). Perform a monitor self-test feature check to determine if the intermittent problem occurs in self-test mode.
Missing color	Perform a monitor self-test feature check. Ensure that the video cable connecting the monitor to the computer is connected properly and is secure. Check for bent or broken pins in the video cable connector.
Wrong color	Try different Preset Modes in Color settings OSD. Adjust R/G/B value in Custom Color in Color settings OSD. Change the Input Color Format to RGB or YCbCr/YPbPr in the Color settings OSD. Run the onboard diagnostics.
Image retention from a static image left on the monitor for a long time	Set the screen to turn off after a few minutes of screen idle time. These can be adjusted in the Windows Power Options or Mac Energy Saver setting. Alternatively, use a dynamically changing screensaver.
Video ghosting or overshooting	Change the Response Time in the Display OSD to Normal or Fast depending on your application and usage.
The screen image is too small	Check the Aspect Ratio setting in the Display settings OSD. Reset the monitor to factory settings (Factory Reset).
Cannot adjust the monitor with the buttons on the bottom of the panel	Turn Off the monitor, unplug the power cable, plug it back, and then turn On the monitor. Check if the OSD menu is locked. If yes, press and hold the Exit button (button 4) for four seconds to unlock.
No Input Signal when user controls are pressed	Check the signal source. Ensure that the computer is not in Standby Mode by moving the mouse or pressing any key on the keyboard. Check if the video cable is plugged in properly. Disconnect and reconnect the video cable if necessary. Reset the computer or video player.
The picture does not fill the entire screen	Due to different video formats (aspect ratio) of DVDs, the monitor may display in full screen. Run the onboard diagnostics.

Contacting Dell

To contact Dell for sales, technical support, or customer service issues, see [Contact Support at Dell Support Site](#).

- ① **NOTE:** Availability varies by country, region, or product, and some services may not be available in your country.
- ① **NOTE:** If you do not have an active Internet connection, you can find contact information about your purchase invoice, packing slip, bill, or Dell product catalog.
