

Statement of Volatility

Dell Pro 24 Monitor - E2426H

 **CAUTION:** A CAUTION indicates either potential damage to hardware or erasure of data and tells you how to avoid the problem.

The Dell E2426H monitor contains both volatile and non-volatile (NV) components. Volatile components lose their data immediately after power is removed from the component. Non-volatile (NV) components continue to retain their data even after power is removed from the component. The following NV components are present on the E2426H system board.

Table 1. List of non-volatile components on system board

***E2426Hf**

****E2426Ho**

Description	Reference designator	Volatility description	User accessible for external data	Remedial action (action necessary to erase data)
*System EEPROM	U9	Non-volatile memory, 16 Kbit. For storage system setting.	No	Part place on interface board, it has hardware/software write protected.
*System Flash ROM	U10	Non-volatile memory, 8 Mbit. For storage system firmware.	No	Part place on interface board, it has hardware/software write protected.
*VGA EDID EEPROM	U8	Non-volatile memory, 2 Kbit. For storage VGA EDID data.	No	Part place on interface board, it has hardware/software write protected.
**System EEPROM	I105	Non-volatile memory, 16 Kbit. For storage system setting.	No	Part place on interface board, it has hardware/software write protected.
**System Flash ROM	I201	Non-volatile memory, 8 Mbit. For storage system firmware.	No	Part place on interface board, it has hardware/software write protected.
**VGA EDID EEPROM	I301	Non-volatile memory, 2 Kbit. For storage VGA EDID data.	No	Part place on interface board, it has hardware/software write protected.

 **CAUTION:** All other components on the system board erase data if power is removed from the system.
