

Overview

HPE OneView is converged management that eliminates infrastructure complexity with automation simplicity. This modern management architecture is designed to accelerate your IT operations for managing servers, storage, and network resources.

HPE OneView is an integrated, converged management platform that increases automation and streamlines processes across compute, storage and fabric resources. Designed for the way people work—not how devices are managed—HPE OneView helps your IT team increase productivity, reduce human error and speed IT service delivery.

Using HPE OneView, IT can design resources using software-defined templates that make server, fabric and storage configuration faster and more repeatable. They can also control resources programmatically through a unified API, integrating with the workflow orchestration and management tools your business relies on. With HPE OneView, infrastructure can be configured, monitored, updated and repurposed with a single line of code—whether your resources are physical, virtual or container-based.

HPE OneView helps organizations move toward a faster, simpler and more efficient composable infrastructure. Composable infrastructure uses fluid resource pools of compute, storage and flexible networking fabric optimized with intelligent software templates to allow resources to be easily assembled, disassembled and reallocated based on the needs of your business.

Composable infrastructure is a requirement to compete successfully in today's Idea Economy—where companies need to turn ideas into revenue generating services faster than their competitors. Composable infrastructure must also support two very different operating models:

- Traditional applications that are designed to support and automate existing business processes such as collaboration, data processing and analytics, supply chain, and web infrastructure.
- A new breed of applications and services that drive revenue and new customer experiences by leveraging mobility, big data, and cloud native technologies.

HPE OneView enables IT administrators to manage both models as a single infrastructure on a single platform. And with greater automation and control, you'll work smarter, reduce risk and deliver better business results.

HPE OneView provides the software-defined intelligence across HPE's entire family of infrastructure solutions, from providing embedded management in HPE Synergy¹ to delivering attributes of composability in HPE BladeSystems, HPE ProLiant server platform, HPE 3PAR storage and HPE Converged Systems. This means that customers can confidently take advantage of HPE solutions today while ensuring they can evolve toward full composability across their entire infrastructure in the future.

Software-defined intelligence

Software-defined intelligence within HPE OneView delivers template-based automation of initial provisioning and updates of compute, storage and fabric resources. With HPE OneView templates, domain experts are able to model important settings in software such as RAID configuration, BIOS settings, FW baseline, network uplinks and downlinks, and SAN storage volumes and zoning. Once templates have been created, non-infrastructure experts can rapidly and reliably compose and update resources in response to application owner requirements.

NOTE:¹ The embedded management solution for HPE Synergy is the HPE Synergy Composer, which is based on HPE OneView.

Compute automation

Historically, change operations required coordination across multiple teams, multiple tools and complex interdependent processes that can often take weeks to complete. Using HPE OneView server profile templates, you can define configurations once, in minutes, and then provision or update the configuration many times—consistently and reliably—across your compute, storage and networking resources. Many resources can easily be added, removed or migrated with minimal workload impact. Changes to the

Overview

templates are immediately reflected in profile compliance status, allowing you to pinpoint systems that need attention and roll out changes more efficiently.

Infrastructure device drivers and firmware updates can be automated at scale with HPE OneView. Frictionless firmware updates provide the ability to conduct minor updates to infrastructure (frames and interconnect modules) online with zero downtime and major updates with reduced downtime. For compute nodes, all firmware in the system can be automatically updated including host bus adapters, smart arrays, hard drives and connected storage firmware. Profile templates used in combination with HPE Smart Update Tools enable updates to be staged, scheduled and installed without rebooting the system. This capability allows hardware teams to deploy new baselines on their schedules and removes the need for application owners to schedule multiple maintenance windows.

Storage automation

Through software-defined intelligence, HPE OneView delivers a new level of storage automation that makes businesses more responsive, secure and efficient. HPE 3PAR StoreServ Storage is fully integrated with HPE OneView server profiles, which saves time by automating a policy-driven rollout of enterprise class storage resources. HPE OneView automation provisions storage volume, zones the fiber channel SAN and attaches the storage to the server profile. With HPE OneView you can also proactively identify SAN health issues from volume to target, which saves time and helps resolve SAN issues before they impact the business.

Network fabric management

Another benefit of software-defined intelligence in HPE OneView is the cost savings it provides. An example of this is the HPE OneView configuration of HPE Virtual Connect. HPE Virtual Connect virtualizes your server edge connections, making server changes transparent to storage and networks. With HPE Virtual Connect you can reduce additional costs and clutter by consolidating switch ports, management and interconnects. HPE OneView templates provide a visual means to define and provision downlinks to servers and uplinks to top-of-rack switches that can be used to provision a single enclosure or up to forty enclosures at the same time. The new in-service Virtual Connect migration capability allows customers to migrate to HPE OneView from their legacy environment in minutes instead of hours, while ensuring they don't experience any downtime.

HPE OneView now enables downlink connection provisioning for Cisco Fabric Extender (B22HP FEX) modules when paired with Cisco Nexus 5000 and 6000 series switches, in addition to monitoring functions provided in previous releases. Starting with HPE OneView 3.0, HPE requires purchase of one of the following SKUs in order to manage their B22 interconnect modules: HPE OneView 3yr 24x7 Support for Cisco B22HP Fabric Extender LTU, and HPE OneView 3yr 24x7 Support for Cisco B22HP Fabric Extender E-LTU.

Proactive insights

With HPE OneView, you can manage IT across the entire infrastructure lifecycle—designing, provisioning, monitoring, updating—through a single interface that's designed for the way you think and work. HPE OneView gives you proactive insights into the health of your entire infrastructure, alerting you to issues so you can solve them in a timely manner. An intuitive dashboard provides an at-a-glance view of the status of your servers, storage pools and enclosures, saving time and improving productivity. Color-coded icons clearly show which systems are functioning properly and which ones need help—whether you manage five systems or 500.

HPE OneView simplifies lifecycle management with a view of your configuration compliance across server profiles, making it easy to enforce consistent configurations. HPE Integrated Lights-Out (iLO) lets you and your team perform activities securely on an HPE server from a remote location. Agentless monitoring via iLO ensures that all of your data center devices are automatically set up for monitoring, providing you with continual and comprehensive health status updates and proactive alert notifications. A unified user experience with features such as a map view of your devices and smart search to instantly find the information you need, simplifies everyday tasks and processes. With greater visibility and control of your infrastructure, you become more efficient, agile and productive, saving time and money.

For those needing enterprise scale functionality, the HPE OneView Global Dashboard provides customers with a unified view of the health of their servers, profiles and enclosures across multiple virtual and physical appliances.

To simplify management and improve efficiency, HPE OneView also includes built-in 24x7 remote support that automatically transmits pre-failure alerts to HPE call centers. This functionality removes the need for call logging and accelerates spare parts

Overview

ordering and delivery. Customers will also benefit from HPE Proactive Care Service and HPE Datacenter Care Service, activities that help prevent issues and increase optimization.

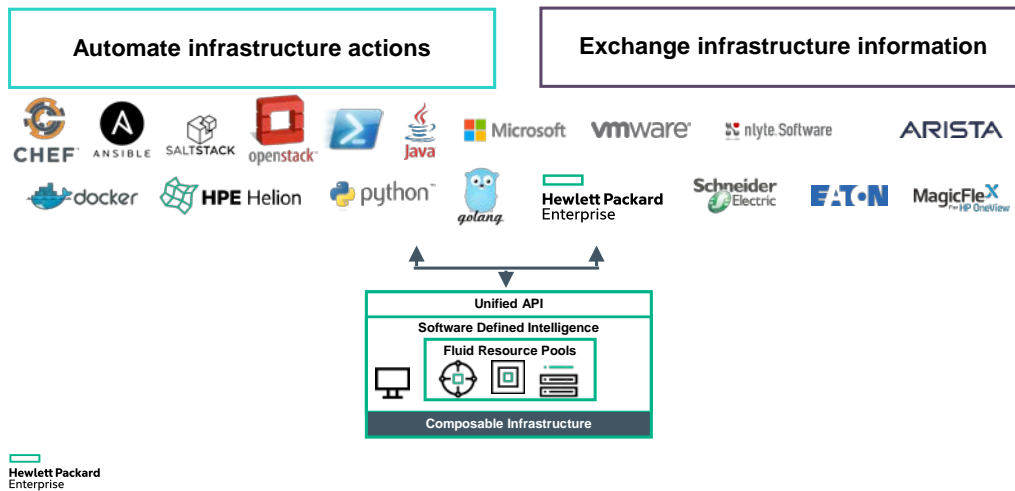

Unified API

A single, unified API within HPE OneView lets you automate the provisioning, configuration and monitoring of your entire infrastructure, reducing the time you spend managing your environments. By integrating with the unified API, HPE OneView supports requirements for both traditional environments and the IT environment needed for the Idea Economy. The unified API allows you to extend the power of the composable infrastructure to every aspect of the data center: virtualization, facilities, automation, cloud and application development.

Continuous delivery of applications and services requires fast, policy-based automation of applications and infrastructure across development, testing and production environments. The unified API lets developers and ISVs integrate with automation tool chains to drive a more aligned and responsive delivery of IT services.

The unified API also integrates with other tools and processes within your environment providing a consistent set of information that is continuously and automatically updated. You can share configuration, performance and health data information with operational and datacenter infrastructure management (DCIM) tools that is always up to date.

The power of software-defined datacenter management Enabling a broad ecosystem

Overview

What's New

HPE OneView 3.0 provides the following enhancements for converged management:

- Global Dashboard delivers enterprise scale management of Synergy, c-Class and DL into a single view, unifies management of HPE OneView and Synergy Composer instances & manages up to 10 HPE OneView appliances
- Complete server-level management for ProLiant DL platforms (including RAID)
- Monitoring of HPE Apollo servers series 2000, 4000, 6000 and 8000
- Scopes: logically group resources such as Finance, sales, and ERP
- Automated backup scheduling: daily, weekly, on demand
- Integrated remote support for c7000, Synergy 12000 Frames, Gen8+ BLs and DLs to receive 24x7 monitoring, pre-failure alerts, automatic call logging, and automatic parts dispatch

Network Management

- Support for Virtual Connect 16GB Fibre Channel Module to accelerate migration to HPE OneView
- In-Service Migration - VCM to HPE OneView
- Management of **Cisco Fabric Extender for HPE BladeSystem** modules (also known as the **B22HP**)

Partner Integrations

- Microsoft System Center integration provides support for Windows Server 2016, System Center 2016, HPE Synergy, Synergy Composer and OneView 3.0, as well as firmware and driver support from SPP 2016.10.0.
- VMware integration adds support for VMware vSphere 6.5 (including Proactive HA), vRealize Operations Manager 6.4, and vRealize Log Insight 4.0. Rolling cluster remediation and cluster firmware updates and create/grow cluster using HPE OneView Server Profile Templates (including HPE Synergy Image Streamer). Support for HPE Synergy D3940 Storage Module, HPE Synergy 12 GB SAS Connection Module, HPE StoreVirtual 3200, and 3PAR provisioning using deduplication.

Supported Product

User Experience

A unified user experience is provided in HPE OneView to simplify everyday tasks and processes. Converged management provides you with a variety of powerful, easy-to-use tools in a single interface that's designed for the way you think and work:

- **Map View** allows you to visualize the relationships between your devices, up to the highest levels of your datacenter infrastructure.
- **Dashboard** provides capacity and health information at your fingertips. Custom views of alerts, health, and configuration information can also be displayed for detailed scrutiny.
- Global Dashboard delivers enterprise scale management of Synergy, c-Class and DL into a single view, unifies management of HPE OneView and Synergy Composer instances & manages up to 10 HPE OneView appliances
- **Smart Search** instantly gets you the information you want for increased productivity, with search support for all the elements in your inventory (for example, to search for alerts).
- **Activity View** allows you to display and filter all system tasks and alerts.
- **Mobile access** using a scalable, modern user interface based on HTML5.
- **Global Dashboard** - For those needing enterprise scale functionality, the HPE OneView Global Dashboard provides customers with a unified view of the health of their servers, profiles and enclosures across multiple virtual and physical appliances. Managing up to 6,400 nodes today and more in the future, the HPE OneView Global Dashboard also provides centralized management of alerts and and core inventory data. In context launch to HPE OneView, iLO, and Onboard administrator via single sign-on also means that you are only one click away from powerful device-level lifecycle management. At no additional cost, customers can simply download and install this feature that runs alongside HPE OneView, allowing them to manage their HPE c-Class, HPE Proliant DL, and HPE Synergy servers as one
- **Dynamic collaboration** among experts replaces static and manual use of whiteboards, sticky notes, emails, and spreadsheets. The single integrated platform provides 'one view' across the converged infrastructure, enabling collaboration through real-time, context-sensitive information sharing.

Management appliance

The HPE OneView management appliance is the **lifecycle management** tool that provisions, monitors, updates, and repairs your infrastructure. It is delivered as a virtual appliance running in a VMware ESXi or Microsoft Hyper-V virtual machine. The appliance is 'OS-agnostic' ---- for example, it can manage servers running both Windows and Linux operating systems. Appliance upgrade support is also provided to help existing users to move to the current version of HPE OneView.

HPE OneView provides a **secure platform for data center management**. Key security characteristics of the architecture provide a holistic basis for security:

- Separation of the data and management planes is critical to avoid takeover in Denial of Service (DoS) attacks.
- Use of groups incorporates and institutionalizes best security practices for compliance.
- Provisioning control assures standardization in mass deployments.
- Deployed via a hardened appliance platform.

Industry-standard enterprise Directory Services are utilized to confirm user identification and to control access to compute resources. This allows one administrator to quickly set up authentication and

Supported Product

authorization for each user, as appropriate to their responsibilities and organizational associations, for specific categories of compute resources.

Role-based access control (RBAC) restricts system access to authorized users.

Scopes enables creation of any logical group of enclosures, server hardware, networks or LIGs. Can create a logical group based on business unit – finance, sales etc or could be by OS installed on the servers – Windows, Linux, ESX

Single-sign-on (SSO) to iLO and Onboard Administrator is provided in HPE OneView. All user actions are logged in an audit log. Options for LDAP/AD-based directory services authentication and authorization are also supported.

The HPE OneView **management appliance is security-hardened** with limited open ports, limited access to the command prompt, and a restricted "kiosk" graphical user interface (which prevents access to the underlying operating system and other software). Sensitive data on the appliance is encrypted and data downloaded from the appliance is encrypted by default (e.g. support dumps, backup files).

Appliance backups for the HPE OneView management appliance utilize a specific user role which does not permit access to other resource views and tasks. Backup files are encrypted and contain configuration settings and management data. There is no need to create separate backup files for the appliance and its database files. Backups can be created while the HPE OneView appliance is online, and the backup process can be scheduled from outside the management appliance with file collection set according to your site's policies. Can be scheduled daily or weekly and can be performed on demand. It can backup to a remote share.

Remote Support

HPE OneView provides integrated remote support that is part of the appliance. For Gen8/Gen9 it will utilize the agentless remote support that is part of iLO 4. It allows Appliance Registration for remote support and Customer opt-in, contact information & support partner details. Provides Service incident forwarding & tracking in HP OneView with case status updates and optional integration with Insight Online Access

Licenses

The HPE OneView management appliance controls licenses. The same management appliance can be used for both HPE OneView Advanced licenses and for HPE OneView Standard. This choice is made by the user when they initially add their system to the HPE OneView management appliance.

- **HPE OneView Advanced** provides full-featured licenses which can be purchased for managing Gen8 and Gen9 servers. All HPE OneView Advanced versions are licensed 'per physical server.' These licenses include three years of 24x7 Technical Support and Updates (TS&U) with web-based training (WBT) to build basic product proficiency. Full HPE OneView Advanced licenses also provide 'integrated licensing' rights-to-use HPE Insight Control at no additional charge. Trial versions of HPE OneView Advanced can be used for 60-days without charge.
- **HPE OneView Standard** can be used for inventory, health monitoring, alerting, and reporting without additional fees. HPE OneView Standard can monitor G6, G7, Gen8, and Gen9 servers. The user interface is similar to the HPE OneView Advanced version, but the software-defined functionality is not available. An annual 9x5 support offering is available for additional fee.

HPE OneView Advanced licenses are available in a variety of types to meet different user needs:

- **Standalone licenses** can be ordered by the customer without any other restrictions. Customers will receive a license entitlement certificate, which must be redeemed online to obtain the license activation key, and then the key input into the management appliance.

Supported Product

- **Factory integrated licenses** are purchased with HPE ProLiant servers and HPE BladeSystems and provide a 'Connect and Go' user experience. License keys are preloaded on the systems and are immediately managed by the HPE OneView management appliance when connected.
- **Tracking licenses** provide customer-specific, pay-as-you-go enterprise licensing. Tracking licenses require customer pre-approval of an Activation Key Agreement (AKA) contract. For more information, see <http://www.hp.com/go/AKA>
- **Upgrade licenses** are available to transition from HPE Integrated Lights-Out (iLO) Advanced, HPE Insight Control, or HPE Virtual Connect Enterprise Manager (VCEM).

NOTE: Upgrades do not provide HPE iLO Advanced licenses or 'integrated licensing' rights-to-use HPE Insight Control.

Software versions

The HPE OneView management appliance controls the licenses, and it can be obtained in two ways:

- (1) Software download (OVA) from **HPE Software Depot** (<http://www.hp.com/go/oneview/download>), or
- (2) **Purchase** of the HPE OneView Media Kit (contains a USB flash drive).

HPE OneView Advanced management software licenses can be used for 60-days without charge.

HPE OneView Standard management software can be used without charge.

Automated Storage Provisioning

HPE OneView provides **automated, policy-driven provisioning of storage resources**. It is fully integrated with server profiles so that you can manage your new or existing HPE 3PAR storage infrastructure. The software-defined nature of HPE OneView enables you to:

- View and manage your storage system and storage pools,
- Add existing volumes and create new volumes, and
- Create volume templates to provision multiple volumes with the same configuration.
- Automate zoning Fiber Channel SANs and attaching storage to server profiles.

Switched fabric, and VSAN SAN topologies are supported to provide dynamic connectivity between HPE OneView managed servers and HPE 3PAR StoreServ Storage Systems. HPE OneView discovers the SAN paths and provides connectivity services for the following infrastructures:

- HPE 3PAR StoreServ Storage systems connected directly to an enclosure via Fiber Channel.
- HPE 3PAR StoreServ Storage Systems connected to an HPE B-series Fiber Channel SAN configurations (SANs - managed through the HPE B-Series SAN Network Advisor software).
- HPE 3PAR StoreServ Storage Systems connected to a Brocade Fiber Channel SAN configurations (SANs - managed through Brocade Network Advisor (BNA) software).

Automatic SAN zoning

You can also add Storage Area Network (SAN) managers to bring their managed SANs under management of the appliance. Managed SANs can be associated with Fiber Channel networks on the appliance to enable automated zoning and automatic detection of Fiber Channel connectivity. HPE OneView automatically configures SAN zoning through server profile volume attachments.

Supported Product

Storage integration through server profiles

Storage integration with server profiles saves you time and makes you more productive. You can attach private or shared storage volumes to HPE OneView server profiles to enable automated boot target configuration and to move Direct Attach (FlatSAN) profiles across enclosures.

Storage monitoring, connectivity, and synchronization

HPE OneView monitors storage systems and issues alerts when there is a change in health or connectivity status of storage systems. Storage systems are also monitored to ensure that they are synchronized with changes to hardware and configuration settings. Should the appliance lose connectivity with a storage system, an alert is displayed until connectivity is restored. Storage topology is also available in Map View.

See the [HPE OneView Support Matrix](#) for a list of supported storage systems.

Network management **Network management using HPE Virtual Connect**

HPE Virtual Connect provides **wire-once, change-ready environment** to make it easy for administrators to manage their dynamic network environment at the server edge. HPE OneView Advanced simplifies the deployment of various Virtual Connect environments: single enclosure, racks of enclosures in a single data center, and across data centers.

The software-defined nature of HPE OneView Advanced extends HPE Virtual Connect features using Profiles, Logical Interconnect Groups, and Network Sets to simplify management and capture best practices:

- **Profiles** enable servers that are licensed using HPE OneView Advanced to configure the Virtual Connect capabilities and support dynamic network changes. Virtual Connect administrators can change pre-existing connection networks and connection bandwidth without powering down blade servers.
- **Logical Interconnect Groups** are created for configuring the Virtual Connect module with its uplinks and associated networks, enabling efficient application to multiple Virtual Connect environments.
- **Network Sets** are used to easily update multiple networks in various profiles from a single location, rather than updating each network separately. Network sets are useful in virtual environments where each profile connection needs to access multiple networks.

Fibre Channel support in HPE Virtual Connect includes the HPE Virtual Connect 8Gb 24-Port Fibre Channel Module and HPE Virtual Connect 8Gb 20-Port Fibre Channel Module, and FlexFabric supports the next-generation HPE Virtual Connect FlexFabric-20/40 F8 Module.

Active-Active configuration support for Virtual Connect allows full use of all uplink ports in an uplink set, reduces the oversubscription rates for server-to-network-core traffic for more predictable traffic patterns, and provides faster link failure detection and failover times. Optimized for North/South traffic patterns, the Active/Active configuration support can be combined with the SmartLink to allow NIC teaming drivers to transmit on both adapter ports and maintain redundancy.

Advanced capabilities support untagged traffic, VLAN tunneling, and configurable Link Aggregation Control Protocol (LACP) timers, min/max bandwidth settings on connections, visibility to MAC address

Supported Product

tables, 'per FlexNIC' traffic statistics and performance monitoring, and enhanced detection-protection-reporting of Pause Flood and Network Loops.

General network management

HPE OneView Advanced **also** provides network capabilities for HPE BladeSystems which do not use HPE Virtual Connect for networking. The 'Networking' section of the HPE OneView Advanced main menu has added a 'New Switches' resource to assist in these efforts. The following switches can be monitored: the Cisco Nexus 5548 switch, the Cisco Nexus 5596 switch, and the Cisco Nexus 6001 switch.

The Cisco Fabric Extender for HPE BladeSystem modules (also known as the B22HP interconnect module, or FEX) is modeled as part of the logical interconnects and logical interconnect groups. The power state of the FEX is also monitored, and inventory and FRU data is shown for the FEX and the Cisco Nexus 5000 series switches. HPE OneView also supports monitoring of networks provisioned to FEX, FEX port enable/disable.

Map View in HPE OneView Advanced shows relationships between the FEX and the parent top-of-rack Cisco Nexus 5000 or 6000 series switches. Other capabilities, like the bulk creation of Ethernet networks via the user interface and REST API, can provide additional productivity for users. HPE OneView simplifies VLAN provisioning by allowing configuration of uplinks and downlinks.

See the [HPE OneView Support Matrix](#) for specific Virtual Connect and network hardware requirements.

System health

Efficient data views and effective control enable you to respond to issues for managing the health of HPE ProLiant servers. Both HPE OneView Standard and HPE OneView Advanced simplify monitoring by providing a streamlined, modern alert management architecture. When managed resources are added to the appliance, they are **automatically set up for monitoring**, including the automatic registration of SNMP traps and scheduling of health data collection. HPE ProLiant Gen8 and Gen9 servers are monitored immediately without requiring you to invoke additional configuration or discovery steps.

All monitoring and management of data center devices is **agentless and out-of-band** for increased security and reliability. No OS software is required, no open SNMP ports on the host OS are required (for Gen8 and Gen9), and zero downtime updates can be performed for these embedded agents. HPE ProLiant Gen8 and Gen9 servers support agentless monitoring via iLO. HPE OneView uses SNMP in a 'read-only' mode (gets and traps, but not sets) to the iLO only – not to the host OS. HPE ProLiant G6 and G7 servers require host OS SNMP agents.

HPE OneView Standard and HPE OneView Advanced both provide **proactive alert notifications** via email (instead of using SNMP trap forwarding) **and automated alert forwarding**. You can view all alerts, filter your alerts, and search your alerts using HPE Smart Search. Alerts can be assigned to specific users and annotated with notes from administrators. Notifications or traps can be automatically forwarded to enterprise monitoring consoles or to centralized SNMP trap collectors. Admins can create **alert filters on groups of devices** – so different admins can only see the alerts for the systems that they are responsible for maintaining

Customized dashboard capability allows you to select and display important inventory, health, or configuration information and to define custom queries for new dashboard displays. The single user interface provides additional summary views of firmware revisions and of the hardware inventory for servers, storage, and networks. Other data and inventory elements are visible through the user interface and REST API, and can be found using HPE Smart Search.

Supported Product

Firmware updates and Configuration change management

HPE OneView Advanced leverages and extends the HPE Smart Update portfolio of **HPE Service Pack for ProLiant (SPP)** and **HPE Smart Update Manager (HPE SUM)** for breakthrough system maintenance at the scale of your data center. HPE SPP and HPE SUM provide capabilities to systematically update HPE ProLiant servers and blade infrastructures with one-click simplicity. HPE OneView Advanced extends these capabilities with **software-defined approaches** and with **firmware baselines** for efficient, reliable, non-disruptive, and simple firmware management across the data center.

The firmware repository in HPE OneView Advanced allows you to manage multiple versions of HPE Service Pack for ProLiant (SPP). An SPP is a comprehensive collection of firmware and system software components (including drivers, agents, utilities, firmware packages for HPE ProLiant servers, controllers, storage, blades, enclosures, and other options). **SPP collections are all tested together as a single solution stack.** HPE OneView Advanced deploys the SPP across your environment according to your business practices and provides automatic firmware updates for a variety of uses:

- Identify firmware compatibility issues.
- Set a firmware baseline on devices to establish a desired firmware state.
- Add devices while performing minimum required firmware checks and highlighting out-of-compliance devices for updates with the selected firmware baseline.
- Update firmware for an entire enclosure, or individually for components.
- Apply firmware baselines to servers as a part of the server profile, while maintaining flexibility for specific servers to differ from an enclosure's baseline.

Firmware updates in HPE OneView Advanced are driven by server profiles using HPE Smart Update Manager (HPE SUM) for efficiency at scale. **Firmware update operations do not impact your production LAN** in any way because they are performed entirely via the management LAN. These same processes can be used to simplify configuration change management across your data center.

Reports

Standardized reports are available to users of both HPE OneView Standard and HPE OneView Advanced. A pre-defined list of reports is available from the user interface or through the REST API. These reports can be exported to CSV or Microsoft Excel files or printed as PDF files. Pre-defined reports include:

- Alerts Report
- Users Report
- Server Inventory
- Server Firmware Inventory
- Server Profiles Inventory
- Enclosure Bay Inventory
- Enclosure Inventory
- Interconnect Inventory

Reports are based on HPE OneView inventory, configuration, and health status information. Additional data and information can be obtained for custom reporting by querying the REST API.

Server Provisioning

HPE OneView Advanced provides the right-to-use a complete provisioning solution for Hewlett Packard Enterprise servers.

This virtual appliance solution can be used to install and configure HPE ProLiant servers using resources such as OS Build Plans and scripts to run deployment jobs. Server provisioning features allow you to:

- **Install Windows, Linux, and ESXi on HPE ProLiant servers.**
- Deploy operating systems to Virtual Machines (VMs).
- **Update drivers, utilities, and firmware** on HPE ProLiant servers using the HPE SPPs.

Supported Product

- **Configure** HPE ProLiant system hardware, iLOs, BIOS, HPE Smart Array, and Fibre Channel HBA.
- Deploy to target HPE ProLiant Gen8 and Gen9 servers without using PXE (leveraging HPE Intelligent Provisioning), and with additional support for ProLiant G7 and G6 servers.
- **Run deployment jobs** on multiple servers simultaneously.
- Customize your HPE ProLiant deployments via an easy-to-use browser-based interface.
- **Create and run customized Build Plans** to perform additional configuration tasks either before or after OS deployment.
- Use REST API calls to perform all of the functions available from the user interface.

Remote management (HPE iLO Advanced)

HPE OneView Advanced licenses **iLO Advanced**, HPE's **comprehensive lights-out remote management** solution for ProLiant servers. Numerous key features help to solve complex IT problems, including:

- **Remote access** to server power control and event logs.
- **Graphical Remote Console** turns a supported browser into a virtual desktop, giving the user full control over the display, keyboard, and mouse of the host server. The OS-independent console displays remote host server activities (like shutdown/startup operations) and can be launched from the HPE OneView server profile page.
- **Shared console and Console replay** allows up to six team members to view and share control of a single virtual KVM session, while capturing and saving screen video for later review.
- **USB-based Virtual Media** allows an IT administrator to boot the remote server from the client machine (or anywhere on the client's network), and execute functions remotely.
- **Integration with Microsoft Terminal Services** provides a graphical remote console when the OS is fully-loaded/available on the host system -- and a secure, hardware-based Lights-Out console for remote access to the host server when the OS is not operational.
- **Serial record and play back** saves the text-based output data for later access and play back.
- **Remote System logs** record everything being done for later troubleshooting or records.

Environmental management

HPE OneView Advanced integrates resources to provide you with a power monitoring and energy management solution that is designed to scale to the level of your datacenter. Centralized monitoring of datacenter power consumption and thermal output is complemented with energy instrumentation connected into HPE iLO capabilities, allowing compatibility with any operating system residing on the managed server.

HPE OneView Advanced integrates three critical areas for environmental management of the data center: thermal data visualization, power delivery infrastructure representation, and physical asset location in 3D. These key areas are captured in the following environmental management features:

- **3D data center thermal mapping** allows you to view the thermal status of your entire data center at a glance. Thermal data is collected from the managed resources in each data center rack and is presented graphically, allowing easy identification of hot spots in a particular rack.
- **Power Discovery Services** enable automatic discovery and visualization of power delivery topology for your data center. The Hewlett Packard Enterprise Intelligent Power Distribution Units (iPDUs) and Platinum level power supplies enable automatic rack power topology mapping in HPE OneView, which can automatically detect wiring errors (like lack of redundancy) and can automatically update electrical inventory when new servers are installed. HPE OneView also supports per-outlet power control for remote power cycling of each iPDU outlet. (Devices not supporting Power Discovery Services can manually define their power requirements and power topology.)
- **Location Discovery Services** enable HPE OneView Advanced to automatically know and display the exact 3D location of Gen8 and Gen9 servers within HPE Intelligent Series Racks.

Supported Product

This reduces labor time, lowers operational costs, and eliminates human errors associated with inventory and asset management. (Racks and devices that do not support Location Discovery Services can have their position manually input in the rack/device of the data center.)

- **Utilization dashboards** display key CPU/power/thermal information for the selected server, enclosure, or iPDU. Historical utilization graphs with up to three years of data (depending on storage limitations) help identify poor-performing servers and improve power utilization.
- **Visualization of CPU, power, and thermal data** for servers may be viewed and managed.

The environmental management in HPE OneView Advanced can help you save on your operating expenses (OpEx), and it can even extend data center capacity to avoid additional capital expenses (CapEx). It provides performance when you need it, and cost savings when you don't.

Open Integration

Open integration gives you **access to the full power of the management architecture**, assuming appropriate permissions, via the Representational State Transfer (REST) API and State-Change Message Bus. You can **integrate, automate, and customize** this management engine to access information or to control activities using the REST API. With HPE OneView integrations you might:

- Create an intelligent automation hub to orchestrate operations.
- Automate standard work flows, troubleshooting steps, and integrations (such as for configuration management databases, also known as CMDB).
- Connect to Service Desks.
- Monitor resources, collect data, map/model systems, and export data to custom formats.
- Attach custom databases, data warehouses, or 3rd party business intelligence tools.
- Integrate in-house user customizations.

HPE OneView couples a unique **State-change Message Bus** with REST APIs to provide automation and a closed-loop method of ensuring compliance. Intelligent change monitoring via the message bus allows automation to be closed-looped. This interface notifies custom scripts and integrations of all changes to managed resources (both logical and physical resources) via asynchronous messaging without having to continuously poll for status. The message bus returns commands in 500 milliseconds to give you fast response for your custom integration of applications, processes, and devices.

Python and PowerShell scripts are freely available to assist your custom integrations using the REST API. See the [HPE OneView technical documentation](#) and the [HPE OneView Community forum](#).

VMware vCenter Server, Operations Manager, and Log Insight (integrations)

HPE OneView for VMware vCenter seamlessly integrates the manageability features of HPE ProLiant, Synergy, BladeSystem, Virtual Connect, and Storage with VMware solutions. Gain deep control of your virtualized HPE Converged Infrastructure environment—reducing the time it takes to make important changes, increase capacity, or manage planned and unplanned downtime. When used with the automation power of HPE OneView, best practices for a Converged Infrastructure can be defined once and reused many times to provision an entire cluster with compute and storage fully configured in five easy steps.

Supported Product

Integrations for **VMware vRealize Operations Manager** and **VMware vRealize Log Insight** are also available that deliver powerful analytics and deeper troubleshooting tools to your VMware administrators.

Seamlessly integrate HPE's Converged Management with VMware management solutions

- Simplify administration with VMware console access to HPE's infrastructure management.
- Reduce by automating responses to hardware events.
- Take control by launching your trusted HPE management tools.
- Proactively manage changes with detailed relationship dashboards.
- Leverage on-demand server and storage capacity.
- Maintain stability and reliability with online firmware inventory and deployment.
- Leverage deep analytics and troubleshooting using integrations with VMware vRealize Operations Manager and Log Insight.

Extensions for VMware are licensed for use with both HPE OneView and HPE Insight Control. While only one of these two licenses is required on any given host, the advanced provisioning features are only available with HPE OneView licensed hosts. VMware Operations Manager and VMware Log Insight integrations are licensed with HPE OneView only. To download, visit: <http://www.hpe.com/info/ovvcenter>

This integration enables you to provision, modify, and recover complex infrastructure -- both virtual and physical together -- from your preferred management console.

NOTE: VMware vCenter Server, Operations Manager, and Log Insight must be purchased separately and are not included with HPE OneView.

Microsoft System Center (integration)

HPE OneView integrates with Microsoft System Center Server to deliver powerful HPE hardware management capabilities directly from System Center consoles for comprehensive system health and alerting, driver and firmware updates, OS deployment, detailed inventory, and HPE fabric visualization.

HPE OneView for Microsoft System Center Server provides the following capabilities from the Microsoft System Center consoles:

System Center Virtual Machine Manager (SCVMM)

- Integrated Fabric Management/Storage Add-in automates HPE Storage management and provides an integrated view of VMs and associated storage resources.
- Enhanced provisioning uses HPE OneView profiles to create or grow a Microsoft Hyper-V cluster consistently and reliably.
- Visually trace and monitor your infrastructure network end-to-end, from the host to the individual network modules.
- Facilitate consistency and improve uptime with simplified driver and firmware updates via a rotating, automated workflow for Microsoft Hyper-V clusters.

System Center Operations Manager (SCOM)

- Prevent problems from occurring by proactively monitoring and managing hardware health and intelligently responding to hardware events on HPE Synergy infrastructure, servers, enclosures, HPE Virtual Connect, and HPE Storage.

Supported Product

Includes HPE Storage Management Pack for SCOM, which enables HPE Storage monitoring and management for events/alerts, capacity and health dashboards, and detailed virtual infrastructure.

- Manage the health of HPE ProLiant Gen8 and Gen9 servers without the need for loading OS-based SNMP agents or WBEM providers.
- Launch HPE remote management tools (such as iLO, OA, VCM, and HPE OneView) directly from the SCOM console.

System Center Configuration Manager (SCCM)

- Provides quick and reliable Windows deployment to bare metal ProLiant servers.
- Ensures consistency and maximize uptime with simplified Windows driver and firmware updates.
- Provides detailed component level inventory of every managed HPE Windows server.

Extensions for Microsoft System Center are delivered via 'HPE OneView for Microsoft System Center' and can be downloaded at <http://www.hpe.com/products/ovsc>.

This integration enables you to provision, modify, and recover complex infrastructure -- both virtual and physical together -- from your preferred management console.

NOTE: Microsoft System Center must be purchased separately and is not included with HPE OneView.

HPE ConvergedSystem 700 **HPE ConvergedSystems 700** is a pre-engineered, balanced system that can dramatically simplify your IT environment. It is based on market-leading HPE Converged Infrastructure technology, including HPE BladeSystem servers, HPE 3PAR StoreServ storage, and HPE Networking. The system is easy to procure, manage, scale, and support. This optimized solution can lower the cost and reduce the risk of virtualization deployments.

HPE OneView integration with VMware vCenter and with VMware Operations Manager in the HPE ConvergedSystems 700 provides administrators with increased visibility and control over performance and capacities, while ensuring service levels and operational efficiency in dynamic virtualized environments. Management from a single-pane-of-glass is complemented by HPE Proactive Care support, resulting in a reliable end-to-end solution.

HPE Cloud Optimizer for HPE OneView 'HPE Cloud Optimizer for HPE OneView' is cloud-ready, enterprise-class software for virtualization management that seamlessly integrates with HPE OneView. **Capacity optimization capabilities for physical, virtual, and cloud use** are complemented with single-pane-of-glass manageability of the physical infrastructure elements (servers, storage, and networking). Infrastructure sizing recommendations improve efficiency and reduce costs. Your infrastructure administrator can assess

Supported Product

the risks of planned or unplanned downtime for a server (or enclosure), rebalance (i.e. flex) clusters, and achieve optimal configurations for the best workload performance.

'HPE Cloud Optimizer for HPE OneView' is an optional license for HPE OneView Advanced and requires as an independent purchase. Incremental purchases, outside of HPE OneView, require a full **HPE Cloud Optimizer** license (available from HPE Software).

HPE Operations Orchestration

HPE Operations Orchestration is an industry-leading IT run-book and process automation solution. It can automate 60% of administrative tasks (like provisioning, configuration, patching, and upgrades) and it provides out-of-box codified best practices to enforce standards and improve agility. Up-to-date compliance information enables remediation. You can also automate across physical and virtual servers to decrease the downtime and risk associated with manually-intensive, error-prone tasks.

The HPE OneView integration helps you to develop, deploy and manage automations with ease. Its comprehensive integration capabilities and content span multiple IT domains to **automate your IT tasks, operations, and processes**. As part of the HPE Solutions Content Pack for HPE Operations Orchestration 10.0 release, this integration implements a set of workflows that might support HPE OneView for tasks and activities, authentication, storage, and various network types.

HPE Operations Bridge

HPE Operations Bridge provides the ability to sense, analyze and adapt to manage IT services. With advanced event correlation, log intelligence, predictive analytics and automation, this tool lets you monitor and remediate issues across all your technologies to prioritize business targets

ISV partners

A growing list of ISV partners are taking advantage of the unified API in HPE OneView to automate solutions for customers. These partners range from large software suites like VMware® vCenter, Microsoft® System Center, and HPE Software to focused solution providers like Chef, Docker, Ansible, Arista, Eaton, nLyte, Schneider Electric and others. HPE is continuing to work with ISV partners to further enhance and expand the HPE Composable Infrastructure Partner Program. By integrating with the unified API in HPE OneView, ISVs can provide solutions that reduce the time their customers spend managing their environments

Hardware Support

HPE Server Hardware Platforms

Customers should consult the HPE OneView Support Matrix for specific platform support at <http://www.hp.com/go/oneview/docs>.

- **HPE OneView Advanced** supports management on:
 - HPE ProLiant rack servers (Gen8 and Gen9), and
 - HPE BladeSystem (G7, Gen8, and Gen9) c7000 infrastructure.
- **HPE OneView Standard** supports inventory, health monitoring, alerting, and reporting on:
 - HPE ProLiant rack servers (G6, G7, Gen8, and Gen9), and
 - HPE BladeSystem (G6, G7, Gen8, and Gen9) c7000 infrastructure.

Supported Product

Environmental capabilities of HPE OneView require target servers with an embedded power meter. Systems that support this power management can be found in the HPE OneView Support Matrix at: <http://www.hp.com/go/oneview/docs>

Appliance support and requirements

The HPE OneView management virtual appliance is a free software download at <http://www.hp.com/go/oneview/download>

NOTE: See the HPE OneView Support Matrix for the most current requirements at <http://www.hp.com/go/oneview/docs>

VIRTUALIZATION PLATFORMS FOR THE MANAGEMENT APPLIANCE

Microsoft Hyper-V	Hyper-V Server 2012
	Hyper-V Server 2012 R2
	Windows Server 2012 with the Hyper-V role
	Windows Server 2012 R2 with the Hyper-V role

	VMware ESXi 5.5 Update 3
	VMware ESXi 6.0
	VMware ESXi 6.0 Update 1

CLIENT-SIDE SOFTWARE REQUIREMENTS

Supported Internet browsers

Internet Explorer 10 and later.
 Firefox 45.x
 Firefox Extended Support Release (ESR) 45.x
 Chrome 49.

Consult the HPE OneView Support Matrix for more detailed information: <http://www.hp.com/go/oneview/docs>

NOTE: HPE makes every effort to support newer versions of and updates to supported web browsers. Hewlett Packard Enterprise will endeavor to support the newer browser versions in the next maintenance release or full release of HPE OneView. If you encounter a problem with a newer, untested version of a web browser, submit a report to your authorized HPE support representative. In some cases, the short-term solution might be to revert to an earlier, supported web browser version

Service and Support, HPE Care Pack, and Warranty Information

Warranty

Hewlett Packard Enterprise will replace defective delivery media for a period of 90 days from the date of purchase. This warranty applies to all HPE OneView products found on the delivery media.

HPE Software Support

Hewlett Packard Enterprise offers a number of additional software support services, many of which are provided to our customers at no additional charge.

Software Technical Support and Update Service

HPE OneView software products include three years of 24x7 HPE Software Technical Support and Update Service. This service provides access to HPE technical resources for assistance in resolving software implementation or operations problems. The service also provides access to software updates and reference manuals in electronic form. With this service, HPE OneView customers will benefit from expedited problem resolution as well as proactive notification and delivery of software updates. For more information, see "Software Services" under "Support Services" at <http://www.hp.com/services/insight>

Registration for Software and Technical Support and Update Services

If you received a license entitlement certificate, registration for this service will take place following online redemption of the license certificate/key.

How to Use Your Software Technical Support and Update Service

Once registered, you will receive a service contract in the mail containing the Customer Service phone number and your Service Agreement Identifier (SAID). You will need your SAID when calling for technical support. You can also use your SAID at the HPE Support Center online to view your contract.

Join the Conversation (<http://www.hp.com/go/hpsc>)

The HPE Support Center is a community-based, user-supported tool for HPE customers to participate in discussions amongst the customer community about Hewlett Packard Enterprise products. For discussions related to HPE OneView software, see "Converged Management" under the "HPE Enterprise Business Community."

Software and Drivers download pages (<http://welcome.hp.com/country/us/en/support.htm>)

provide the latest software and drivers for your ProLiant products.

HPE Service Pack for ProLiant (SPP) (<http://www.hp.com/go/spp>)

HPE Service Pack for ProLiant (SPP) with **HPE Smart Update Manager (HPE SUM)**, part of the HPE Smart Update portfolio, provide breakthrough system maintenance tools that systematically update HPE ProLiant servers and blade infrastructures with one-click simplicity at the scale of your data center. They simplify and consolidate system software update processes enabling you to update your ProLiant servers faster, with a reduction in downtime due to the online updates process.

- HPE Service Pack for ProLiant (SPP) and HPE Smart Update Manager (HPE SUM) can be downloaded from <http://www.hp.com/go/SmartUpdate>
- Product Change Notifications (PCNs), Customer Advisories (CAs), and software driver alerts are proactively delivered through Subscriber's Choice at <http://www.hp.com/go/myadvisory>

Contact Support

HPE Worldwide Customer Service contact numbers are available at <http://www.hp.com/country/us/en/wwwcontact.html>. For U.S. customers, say "HPE OneView" when prompted for the product name.

Service and Support, HPE Care Pack, and Warranty Information

Online Community Forum **Share your Experience** (<http://www.hp.com/go/oneviewcommunity>)

The HPE OneView community is an online forum for customers and partners to share their experiences and pose questions related to HPE OneView. Community members along with HPE representatives can assist with answering questions.

HPE Education and Training Services

Hewlett Packard Enterprise education services focuses on your most important asset, your people, and making sure they have the right skills to deliver business outcomes. With over 35 years of experience we lead the industry when it comes to leading edge skills-based IT training, certification training and training services focused on end user acceptance during a technology change. We represent unmatched expertise across a broad range of Hewlett Packard Enterprise products, industry partner technologies and IT service management disciplines by combining technical knowledge, business insight and hands-on experience in our training delivery.

- **HPE OneView V3 Administration (3 days):**

The HPE OneView instructor led course (Course ID H4C04S) is essential training for System, Network, and Storage administrators using HPE OneView and for System architects anticipating the implementation of OneView into their converged infrastructure.

- **HPE OneView V3 Quick Start (1 day):**

This course (Course ID H7H10S) covers how to install, manage, and configure the HPE OneView Appliance. An architectural overview ensures a high level understanding of the associated managed equipment. Explore HPE OneView management of ProLiant Gen 7, Gen 8 and Gen 9, as well as HPE OneView monitoring of Gen 6 and rack-mounted ProLiant systems.

- **Migrating to HPE OneView (1 day):**

This course (Course ID HOLL8S) is for HPE customers looking to migrate to HPE OneView from legacy tools, using Insight Control, SIM or VC/VCEM tools today.

- Your purchase of HPE OneView Advanced also entitles you access to the **HPE OneView V3 Overview** (Course ID H4C04AAE), an hour of self-paced Web Based Training (WBT). To redeem your WBT course, visit <http://www.hpe.com/ww/oneviewBundle>.

HPE recommends at least **3 HPE Training Credits for ProLiant/CDI** (SKU# HF385E or HF385A1) per student seat with every HPE OneView solution.

- One unit of **HF385E/HF385A1** HPE Education Training Credit will cover one day of training per student.
- Specific training recommendations for a given client will vary depending on the customer's existing knowledge and experience.
- HF385A1/E HPE Training Credits for ProLiant and CDI Services, Qty= 3 units per student

Book on a class today and learn how to get the most from your technology investment. <http://www.hpe.com/ww/learn>.

Technical Specifications

Environment-friendly Products and Approach End-of-life Management and Recycling

Hewlett Packard Enterprise offers end-of-life Hewlett Packard Enterprise product return, trade-in, and recycling programs in many geographic areas. For trade-in information, please go to: <http://www.hp.com/go/green>. To recycle your product, please go to: <http://www.hp.com/go/green> or contact your nearest Hewlett Packard Enterprise sales office. Products returned to Hewlett Packard Enterprise will be recycled, recovered or disposed of in a responsible manner.

The EU WEEE directive (2002/95/EC) requires manufacturers to provide treatment information for each product type for use by treatment facilities. This information (product disassembly instructions) is posted on the Hewlett Packard Enterprise web site at: <http://www.hp.com/go/green>. These instructions may be used by recyclers and other WEEE treatment facilities as well as HEWLETT PACKARD ENTERPRISE OEM customers who integrate and re-sell Hewlett Packard Enterprise equipment.
