THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS MANUAL ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

THE SOFTWARE LICENSE AND LIMITED WARRANTY FOR THE ACCOMPANYING PRODUCT ARE SET FORTH IN THE INFORMATION PACKET THAT SHIPPED WITH THE PRODUCT AND ARE INCORPORATED HEREIN BY THIS REFERENCE. IF YOU ARE UNABLE TO LOCATE THE SOFTWARE LICENSE OR LIMITED WARRANTY, CONTACT YOUR CISCO REPRESENTATIVE FOR A COPY.

The following information is for FCC compliance of Class A devices: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case users will be required to correct the interference at their own expense.

The following information is for FCC compliance of Class B devices: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If the equipment causes interference to radio or television reception, which can be determined by turning the equipment off and on, users are encouraged to try to correct the interference by using one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Modifications to this product not authorized by Cisco could void the FCC approval and negate your authority to operate the product.

CHAPTER 1

Preface

- [Document Conventions](#) , on page 1
- [Related Documentation](#), on page 3
- [Obtaining Documentation and Submitting a Service Request](#), on page 3

Document Conventions

This document uses the following conventions:

Convention	Description
^ or Ctrl	Both the ^ symbol and Ctrl represent the Control (Ctrl) key on a keyboard. For example, the key combination ^D or Ctrl-D means that you hold down the Control key while you press the D key. (Keys are indicated in capital letters but are not case sensitive.)
bold font	Commands and keywords and user-entered text appear in bold font .
<i>Italic font</i>	Document titles, new or emphasized terms, and arguments for which you supply values are in <i>italic font</i> .
Courier font	Terminal sessions and information the system displays appear in <code>courier font</code> .
Bold Courier font	Bold Courier font indicates text that the user must enter.
[x]	Elements in square brackets are optional.
...	An ellipsis (three consecutive nonbolded periods without spaces) after a syntax element indicates that the element can be repeated.
	A vertical line, called a pipe, indicates a choice within a set of keywords or arguments.
[x y]	Optional alternative keywords are grouped in brackets and separated by vertical bars.
{x y}	Required alternative keywords are grouped in braces and separated by vertical bars.

Convention	Description
[x {y z}]	Nested set of square brackets or braces indicate optional or required choices within optional or required elements. Braces and a vertical bar within square brackets indicate a required choice within an optional element.
string	A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks.
< >	Nonprinting characters such as passwords are in angle brackets.
[]	Default responses to system prompts are in square brackets.
!, #	An exclamation point (!) or a pound sign (#) at the beginning of a line of code indicates a comment line.

Reader Alert Conventions

This document may use the following conventions for reader alerts:

Note Means *reader take note*. Notes contain helpful suggestions or references to material not covered in the manual.

Tip Means *the following information will help you solve a problem*.

Caution Means *reader be careful*. In this situation, you might do something that could result in equipment damage or loss of data.

Timesaver Means *the described action saves time*. You can save time by performing the action described in the paragraph.

Warning IMPORTANT SAFETY INSTRUCTIONS

This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Use the statement number provided at the end of each warning to locate its translation in the translated safety warnings that accompanied this device. Statement 1071

SAVE THESE INSTRUCTIONS

Related Documentation

Note Before installing or upgrading the switch, refer to the switch Release Notes.

- Cisco Catalyst 9500 Series Switches documentation, located at: <http://www.cisco.com/go/c9500>
- Cisco SFP and QSFP modules documentation, including compatibility matrixes, located at: http://www.cisco.com/en/US/products/hw/modules/ps5455/tsd_products_support_series_home.html

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

<http://www.cisco.com/c/en/us/td/docs/general/whatsnew/whatsnew.html>

Subscribe to the *What's New in Cisco Product Documentation* as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service and Cisco currently supports RSS version 2.0.

CHAPTER 2

Product Overview

The Cisco Catalyst 9500 Series Switches family consists of fixed core and aggregation layer switches supporting redundant power supplies and modular fans. The Cisco Catalyst 9500 Series offers switch models with downlink ports of the following types:

- 16 and 32 ports of 100G QSFP28
- 12, 24 and 32 ports of 40G QSFP
- 24 and 48 ports of 25G SFP28
- 16, 24, 40 and 48 ports of 10G SFP/SFP28

The Catalyst 9500 Series Switches provide support for the following features:

- Uplink connectivity
 - Network modules with SFP and QSFP uplink ports that provide 10G and 40G connectivity on C9500-16X and C9500-40X switches.
 - Fixed QSFP uplink ports that support 40G/100G connectivity on C9500-24Y4C and C9500-48Y4C switches.
- Advanced security capabilities like ETA, MACSec-256 and TrustWorthy systems.
- IoT integration and policy-based automation from the edge to the cloud with SD-Access solution.
- RJ-45 and USB Mini-Type B console ports.
- Supports SATA SSD storage for container-based application hosting on select switch models.
- [Switch Models, on page 6](#)
- [Front Panel, on page 7](#)
- [Rear Panel, on page 23](#)

Switch Models

Table 1: Switch Models — Base PIDs

Switch Model	Description
Cisco Catalyst 9500 Series Switches	
C9500-12Q	12 40-Gigabit Ethernet QSFP+ ports and 2 power supply slots
C9500-24Q	24 40-Gigabit Ethernet QSFP+ ports and 2 power supply slots
C9500-16X	16 10-Gigabit Ethernet SFP/SFP+ ports and 2 power supply slots; supports optional network modules on uplinks ports — 8-Port 10 Gigabit Ethernet(SFP/SFP+) and 2-Port 40 Gigabit Ethernet(QSFP+)
C9500-40X	40 10-Gigabit Ethernet SFP/SFP+ ports and 2 power supply slots; supports optional network modules on uplink ports — 8-Port 10 Gigabit Ethernet(SFP/SFP+) and 2-Port 40 Gigabit Ethernet(QSFP+)
Cisco Catalyst 9500 Series High Performance Switches	
C9500-32C	32 40G/100G QSFP28 ports and 2 power supply slots
C9500-32QC	32 40G or 16 100G QSFP28 ports and 2 power supply slots
C9500-24Y4C	24 1G/10G/25G SFP28 ports and 2 power supply slots; supports fixed network modules on uplink ports — 4 40G/100G QSFP+ ports
C9500-48Y4C	48 1G/10G/25G SFP28 ports and 2 power supply slots; supports fixed network modules on uplink ports — 4 40G/100G QSFP+ ports

Table 2: Switch Models — Bundle PIDs

Switch Model	Description
C9500-16X-2Q	16 10-Gigabit Ethernet SFP/SFP+ ports and a 2-Port 40-Gigabit Ethernet (QSFP+) network module on uplink ports; and two power supply slots
C9500-40X-2Q	40 10-Gigabit Ethernet SFP/SFP+ ports and a 2-Port 40-Gigabit Ethernet (QSFP+) network module on uplink ports; and two power supply slots
C9500-24X	16 10-Gigabit Ethernet SFP/SFP+ ports and an 8-Port 10-Gigabit Ethernet (SFP/SFP+) network module on uplink ports; and two power supply slots

Switch Model	Description
C9500-48X	40 10-Gigabit Ethernet SFP/SFP+ ports and an 8-Port 10-Gigabit Ethernet (SFP/SFP+) network module on uplink ports; and two power supply slots

Front Panel

SFP and QSFP Module Ports

The SFP and QSFP modules provide copper or fiber-optic connections to other devices. The SFP and QSFP module ports for Cisco Catalyst 9500 Series Switches are as follows :

Table 3: Cisco Catalyst 9500 Series Switch Models

Switch model	Supported ports
Cisco Catalyst 9500 Series Switches	
C9500-12Q	Supports standard 12x40G QSFP+ modules.
C9500-24Q	Supports standard 24x40G QSFP+ modules.

Switch model	Supported ports
C9500-16X	Supports standard 16x10G SFP modules. The uplink ports support 8x10G SFP/SFP+ modules and 2x40G QSFP+ modules.
C9500-40X	Supports standard 40x10G SFP modules. The uplink ports support 8x10G SFP/SFP+ modules and 2x40G QSFP+ modules.
Cisco Catalyst 9500 Series High Performance Switches	
C9500-32C	Supports standard 32x100G or 32x40G QSFP28 modules; all ports are 100G/40G capable.
C9500-32QC	Supports standard 16x100G or 32x40G QSFP28 modules; only the ports in the top row are 100G capable.
C9500-24Y4C	Supports standard 24x25G or 24x10G SFP28 modules; all ports are 25G/10G/1G capable. The uplink ports support 4x100G or 4x40G QSFP+ modules.
C9500-48Y4C	Supports standard 48x25G or 48x10G SFP28 modules; all ports are 25G/10G/1G capable. The uplink ports support 4x100G or 4x40G QSFP+ modules.

Note For information about SFP and QSFP network modules, see [Network Modules, on page 19](#).

Support for Breakout Cables

On Cisco Catalyst 9500 Series High Performance Switches, breakout cables are supported only on the C9500-32C model. Breakout cables enable a single 40G QSFP+ interface to be split into four 10G SFP+ interfaces and a single 100G QSFP28 interface into four 25G SFP28 interfaces.

For supported SFP and QSFP modules, refer to the Cisco Transceiver Modules Compatibility Information at <http://www.cisco.com/c/en/us/support/interfaces-modules/transceiver-modules/products-device-support-tables-list.html>.

Port Mapping for Cisco Catalyst 9500 Series Switches

The odd-numbered ports are on the upper row and the even-numbered ports on the lower row. The following figures show how the ports and the LEDs are numbered on different switch models. This section also explains the port mapping between 40G and 10G ports for the switches when configuring 40G ports to operate as four 10G ports using breakout cables.

C9500-12Q

Figure 6: 40G native port numbering

Table 4: Port mapping for C9500-12Q

40-Gigabit native ports	Configurable 10-Gigabit ports with Breakout Cable
1	1, 2, 3, and 4
2	5, 6, 7, and 8
3	9, 10, 11, and 12
4	13, 14, 15, and 16
5	17, 18, 19, and 20
6	21, 22, 23, and 24
7	25, 26, 27, and 28
8	29, 30, 31, and 32
9	33, 34, 35, and 36
10	37, 38, 39, and 40
11	41, 42, 43, and 44
12	45, 46, 47, and 48

C9500-24Q

Table 7: Port mapping for C9500-40X

40-Gigabit Uplink ports	Configurable 10-Gigabit ports with Breakout Cable
41	1, 2, 3, and 4
42	5, 6, 7, and 8

Port Mapping for Cisco Catalyst 9500 Series High Performance Switches

The following figures show how the ports are numbered on different Cisco Catalyst 9500 Series High Performance Switches.

C9500-32C

Figure 10: Native Port Numbering for C9500-32C

All the 32 ports can be configured as 100G or 40G.

Port Type	Port Number on the Switch
100G native ports	1—32
40G native ports	1—32

Breakout is supported only on 24 ports of the C9500-32C switch model. Every 4th port of C9500-32C does not support breakout due to ASIC limitation. Port numbers 4, 8, 12, 16, 20, 24, 28 and 32 do not support breakout. When you enable breakout on a native port, the port numbering convention changes from 3-tuple to 4-tuple. For example, if you enable breakout on port number 2 which is represented as Hu1/0/2, four logical ports are created which are represented as Hu1/0/2/1, Hu1/0/2/2, Hu1/0/2/3 and Hu1/0/2/4.

Table 8: Port mapping for C9500-32C

40G/100G native ports	Configurable 10G/25G ports with Breakout Cable	40G/100G native ports	Configurable 10G/25G ports with Breakout Cable
1	1/0/1/1, 1/0/1/2, 1/0/1/3, 1/0/1/4	17	1/0/17/1, 1/0/17/2, 1/0/17/3, 1/0/17/4
2	1/0/2/1, 1/0/2/2, 1/0/2/3, 1/0/2/4	18	1/0/18/1, 1/0/18/2, 1/0/18/3, 1/0/18/4
3	1/0/3/1, 1/0/3/2, 1/0/3/3, 1/0/3/4	19	1/0/19/1, 1/0/19/2, 1/0/19/3, 1/0/19/4
4	Not applicable	20	Not applicable
5	1/0/5/1, 1/0/5/2, 1/0/5/3, 1/0/5/4	21	1/0/21/1, 1/0/21/2, 1/0/21/3, 1/0/21/4
6	1/0/6/1, 1/0/6/2, 1/0/6/3, 1/0/6/4	22	1/0/22/1, 1/0/22/2, 1/0/22/3, 1/0/22/4
7	1/0/7/1, 1/0/7/2, 1/0/7/3, 1/0/7/4	23	1/0/23/1, 1/0/23/2, 1/0/23/3, 1/0/23/4
8	Not applicable	24	Not applicable
9	1/0/9/1, 1/0/9/2, 1/0/9/3, 1/0/9/4	25	1/0/25/1, 1/0/25/2, 1/0/25/3, 1/0/25/4
10	1/0/10/1, 1/0/10/2, 1/0/10/3, 1/0/10/4	26	1/0/26/1, 1/0/26/2, 1/0/26/3, 1/0/26/4
11	1/0/11/1, 1/0/11/2, 1/0/11/3, 1/0/11/4	27	1/0/27/1, 1/0/27/2, 1/0/27/3, 1/0/27/4
12	Not applicable	28	Not applicable
13	1/0/13/1, 1/0/13/2, 1/0/13/3, 1/0/13/4	29	1/0/29/1, 1/0/29/2, 1/0/29/3, 1/0/29/4
14	1/0/14/1, 1/0/14/2, 1/0/14/3, 1/0/14/4	30	1/0/30/1, 1/0/30/2, 1/0/30/3, 1/0/30/4
15	1/0/15/1, 1/0/15/2, 1/0/15/3, 1/0/15/4	31	1/0/31/1, 1/0/31/2, 1/0/31/3, 1/0/31/4
16	Not applicable	32	Not applicable

For more information about how to configure a breakout interface, see "Configuring Breakout Interfaces" section in the *Interface and Hardware Components Configuration Guide*.

C9500-32QC

Figure 11: Native Port Numbering for C9500-32QC

Port Type	Port Number on the Switch
40G native ports	1—32
100G native ports	33—48

The 40G ports on this switch can be configured to function as 100G ports using the Command Line Interface (CLI). For more information about mode conversion, see "Configuring Interface Characteristics" in *Interface and Hardware Components Configuration Guide*.

C9500-24Y4C

Port Type	Port Number on the Switch
25G native ports	1—24
40G or 100G native ports	25—28

C9500-48Y4C

Figure 13: Native Port Numbering for C9500-48Y4C

Port Type	Port Number on the Switch
25G native ports	1—48
40G or 100G native ports	49—52

RFID Tag

The chassis has a built-in, front-facing, passive RFID tag that uses UHF RFID technology and requires an RFID reader with compatible software. It provides auto-identification capabilities for asset management and tracking. The RFID tags are compatible with the Generation 2 GS1 EPC Global Standard and are ISO 18000-6C compliant. They operate in the 860- to 960-MHz UHF band. For more information, see [Radio Frequency Identification \(RFID\) on Cisco Catalyst 9000 Family Switches White Paper](#).

Console Ports

The console ports connect the switch to a PC running Microsoft Windows or to a terminal server.

- RJ-45 console port (EIA/TIA-232). The RJ-45 console port connection uses an RJ-45-to-DB-9 female cable.
- USB mini-Type B console port (5-pin connector).

If you use the USB mini-Type B console port, the Cisco Windows USB device driver must be installed on any PC connected to the console port (for operation with Microsoft Windows). Mac OS X or Linux do not require special drivers.

The 4-pin mini-Type B connector resembles the 5-pin mini-Type B connectors. They are not compatible. Use only the 5-pin mini-Type B.

This illustration shows a 5-pin mini-Type B USB port.

Figure 14: USB Mini-Type B Port

With the Cisco Windows USB device driver, you can connect and disconnect the USB cable from the console port without affecting Windows HyperTerminal operations.

The console output always goes to both the RJ-45 and the USB console connectors, but the console input is active on only one of the console connectors at any one time. The USB console takes precedence over the RJ-45 console. When a cable is connected into the USB console port, the RJ-45 console port becomes inactive. Conversely, when the USB cable is disconnected from the USB console port, the RJ-45 port becomes active.

You can use the command-line interface (CLI) to configure an inactivity timeout which reactivates the RJ-45 console if the USB console has been activated and no input activity has occurred on the USB console for a specified time.

After the USB console deactivates due to inactivity, you cannot use the CLI to reactivate it. Disconnect and reconnect the USB cable to reactivate the USB console. For information on using the CLI to configure the USB console interface, see the Software Configuration Guide, Cisco IOS XE Everest 16.5.1 (Catalyst 9500 Switches).

Management Port

The Ethernet management port, also referred to as the Gi0/0 or GigabitEthernet0/0 port, is a VRF (VPN routing/forwarding) interface to which you can connect a PC. It supports TFTP image downloading, network management, SNMP, Telnet, and SSH connections. The switches support out-of-band management through

the Mgmt-vrf. Mgmt-vrf is used to segment management traffic from the global routing table of the switch. The Ethernet management port supports speeds up to 10/100/1000 Mbps and is set to auto-negotiate.

USB Host Ports

The Cisco Catalyst 9500 Series Switches support two USB host ports — USB 2.0 on the front panel and USB 3.0 on the back panel. USB 2.0 port supports Cisco USB flash drives with capacities from 128 MB to 8 GB (USB devices with port densities of 128 MB, 256 MB, 1 GB, 4 GB, and 8 GB are supported). Cisco IOS software provides standard file system access to the flash device: read, write, erase, and copy, as well as the ability to format the flash device with a FAT file system. USB 3.0 SSD port provides an optional 120 GB USB 3.0 SSD storage device for application hosting and saving packet captures and trace logs.

In Cisco Catalyst 9500 Series High Performance Switches, the USB 3.0 port is available on the front panel and support Cisco USB flash drives with capacities from 64 MB to 16 GB.

Mode Button

The mode button has the following function:

- 10G Status LED Mode — works with 10G Status LEDs to indicate status of 10G ports

10G Status LED Mode

Note This functionality is available only on Cisco Catalyst 9500 Series Switches.

Each 40G port can be configured to function as a 10G port using a Cisco QSFP to four SFP Active Optical Breakout Cables that connect a 40G QSFP port of the switch on one end to four 10G SFP ports of the switch on the other end. After system bootup, the four 10G Status LEDs indicate the status of 10G ports 1-4 by default which maps to 40G port number 1. A short press on the mode button moves the pointer to the next 10G group (5-8) which maps to 40G port number 2. You can check the status of all the 96 10G ports by pressing the mode button 24 times, after which it rolls back to 10G port 1-4.

Network Modules

The C9500-16X and C9500-40X switch models support two network modules that provide uplink ports to connect to other devices. The switch should only be operated with either a network module or a blank module installed.

Table 9: Network Modules

Network Module	Description
C9500-NM-8X	This module has eight 10G SFP ports. Any combination of standard SFP modules are supported.
C9500-NM-2Q	This module has two 40G QSFP ports. Any combination of standard QSFP modules are supported.

For information about the network modules, see Installing the Network Modules section. For cable specifications, see Cables and Adapters section.

LED Indicators

You can use the switch LEDs to monitor switch activity and performance. You can also monitor the status of the fan tray assembly and the power supplies.

Figure 15: LEDs on Cisco Catalyst 9500 Series Switches

1	System LED	4	Power Supply Unit(PSU) LED
2	Blue beacon LED	5	Fan LED
3	10G Status LEDs ¹	6	Ethernet Management port LED

¹ Available only on switches with 10G ports.

Figure 16: LEDs on Cisco Catalyst 9500 Series High Performance Switches

1	Ethernet Management port link activity LED	5	Blue beacon LED
2	Ethernet Management port link status LED	6	Fan LED
3	Reset switch	7	Power Supply Unit (PSU) LED
4	System LED	8	Port LEDs

System LED

The system LED indicates the status of the system.

Table 10: System LED Indicator

Color/State	Description
Off	System is not operational.
Green	System is operating normally without alarms.
Amber	System has triggered a minor environmental alarm.
Red	System has triggered a major environmental alarm.

Power Supply LEDs

Power supply modules LED

The following description applies only when two power supplies modules are installed in the switch.

Table 11: Power Supply LED Indicators

Color/State	Description
Green	Power supply is operating normally.
Amber	One of the PSU has input loss.
Red	One of the PSU has output failure.

Fan LED

Table 12: Fan LED Indicator

Color/State	Description
Off	The fan is not receiving power; the fans have stopped.
Green	All fans are operating normally.
Amber	One or more fans have encountered tachometer faults.
Red	One or more fans' tachometer faults have exceeded the maximum limit.

Ethernet Management Port LED

The following table describes the colors and the descriptions of the LEDs for link activity and link status of the Ethernet management port.

Table 13: Ethernet Management Port Link Activity LED

Color	Description
Blinking green	Link is up.
Off	Link is down.

Table 14: Ethernet Management Port Link Status LED

Color	Description
Solid green	Link is up.
Off	Link is down.

Rear Panel

Figure 17: Rear Panel of a 48-Port Cisco Catalyst 9500 Switch (C9500-48Y4C)

1	Power Supply Modules	3	SATA SSD module
2	Fan Modules		

Figure 18: Rear Panel of a 24-Port Cisco Catalyst 9500 Switch

1	USB 3.0 host port	3	Grounding Pad
2	Fan Modules	4	Power Supply Modules

SATA SSD Module

To support the storage needs on the switch, the Cisco Catalyst 9500 Series High Performance Switches provide support for pluggable Serial Advanced Technology Attachment (SATA) Solid State Drive (SSD) module. The SATA SSD module slot is located at the rear panel of the switch. The SSD module storage capacity ranges are 240GB, 480GB and 960GB. SATA SSD works as a general-purpose storage device. The storage drive can also be used to save packet captures and trace logs generated by the operating system.

Power Supply Slots

The switch has two power supply slots that accept AC and DC input power supplies. The power supply modules are field replaceable units (FRUs) and are hot-swappable. The chassis is delivered with one power supply pre-installed in the power supply slot. If only one power supply is ordered, then a blank cover is installed in the empty power supply slot, which must remain installed if a power supply is not installed.

The following table describes the internal power supply modules supported on different switch models.

Table 15: Power Supplies supported by Catalyst 9500 Series Switches

Switch Model	Power Supply Modules
C9500-12Q	<ul style="list-style-type: none"> • PWR-C4-950WAC-R — 950-W AC power supply module • PWR-C4-950WDC-R — 950-W DC power supply module
C9500-24Q	<ul style="list-style-type: none"> • PWR-C4-950WAC-R — 950-W AC power supply module • PWR-C4-950WDC-R — 950-W DC power supply module
C9500-16X	<ul style="list-style-type: none"> • PWR-C4-950WAC-R — 950-W AC power supply module • PWR-C4-950WDC-R — 950-W DC power supply module
C9500-40X	<ul style="list-style-type: none"> • PWR-C4-950WAC-R — 950-W AC power supply module • PWR-C4-950WDC-R — 950-W DC power supply module

Table 16: Power Supplies supported by Catalyst 9500 Series High Performance Switches

Switch Model	Power Supply Modules
C9500-32C	<ul style="list-style-type: none"> • C9K-PWR-1600WAC-R — 1600W AC power supply module • C9K-PWR-1600WDC-R— 1600W DC power supply module
C9500-32QC	<ul style="list-style-type: none"> • C9K-PWR-650WAC-R — 650W AC power supply module • C9K-PWR-930WDC-R— 930W DC power supply module
C9500-24Y4C	<ul style="list-style-type: none"> • C9K-PWR-650WAC-R — 650W AC power supply module • C9K-PWR-930WDC-R— 930W DC power supply module
C9500-48Y4C	<ul style="list-style-type: none"> • C9K-PWR-650WAC-R — 650W AC power supply module • C9K-PWR-930WDC-R— 930W DC power supply module

Fan Modules

The switch supports field-replaceable, variable-speed modular fans with front-to-back airflow. These fan units support Online Insertion and Removal (OIR) for up to 120 seconds and can support a maximum fan speed of 21000 rpm. The fan unit is responsible for cooling the entire chassis and interfacing with environmental monitors to trigger alarms when conditions exceed thresholds. The fan modules contain thermal sensors to detect ambient temperature and adjust the fan speed.

Table 17: Fan Modules supported by Catalyst 9500 Series Switches

Part Number	Description	Switches supported
C9K-T1-FANTRAY	Hot-swappable fan tray unit with dual stacked fans.	<ul style="list-style-type: none"> • C9500-32QC • C9500-24Y4C • C9500-48Y4C
FAN-T4-R	Type 4 hot-swappable fan module.	<ul style="list-style-type: none"> • C9500-32C • C9500-12Q • C9500-24Q • C9500-40X • C9500-16X

For more information, see [Fan Module Overview](#) , on page 60.

CHAPTER 3

Installing a Switch

For initial switch setup, assigning the switch IP address, and powering on information, see the switch getting started guide on Cisco.com.

This chapter contains these topics:

- [Installation Tasks, on page 27](#)
- [Safety Warnings, on page 28](#)
- [Contents of the Shipping Box, on page 29](#)
- [Unpacking the Switch, on page 32](#)
- [Establishing the System Ground, on page 32](#)
- [Installing the Switch, on page 34](#)

Installation Tasks

The process of installing the switch can be broken down into a series of tasks, which are described in the following table.

Task	Description
Unpacking the switch	Remove the switch from the packaging material. Note Save the packaging material for later use if you need to move the chassis.
Installing the switch	Install the switch.
Connecting the chassis to system ground	Construct and attach a system ground wire from the building (earth) ground to the system ground point on the chassis.
Installing the power supply module	Power supplies that are ordered with the switch are preinstalled in the switch. If ordered separately, install the power supplies.
Installing a network module	Install the network modules on the network module slots.
Installing the fan	Install the fan modules in the fan module slots.

Task	Description
Cabling the chassis and modules to the network	The various ports on the chassis must be connected to the network. This process can involve only attaching a network interface cable to the port or it can include the installation of a transceiver of some type in port and then attaching the network interface cable to the transceiver.
Powering up the chassis	After completing the network cabling and making sure that system ground is connected, the power supplies can be turned on. The system powers up and runs through a set of built-in diagnostics.

Safety Warnings

Warning Class 1 laser product. Statement 1008

Warning This unit is intended for installation in restricted access areas. A restricted access area can be accessed only through the use of a special tool, lock and key, or other means of security. Statement 1017

Warning This unit might have more than one power supply connection. All connections must be removed to de-energize the unit. Statement 1028

Warning Only trained and qualified personnel should be allowed to install, replace, or service this equipment. Statement 1030

Warning To prevent personal injury or damage to the chassis, never attempt to lift or tilt the chassis using the handles on modules (such as power supplies, fans, or cards); these types of handles are not designed to support the weight of the unit. Statement 1032

Warning Hazardous voltage or energy is present on the backplane when the system is operating. Use caution when servicing. Statement 1034

**Warning**

This product requires short-circuit (overcurrent) protection, to be provided as part of the building installation. Install only in accordance with national and local wiring regulations. Statement 1045

**Warning**

When installing or replacing the unit, the ground connection must always be made first and disconnected last. Statement 1046

**Warning**

Installation of the equipment must comply with local and national electrical codes.. Statement 1074

**Warning**

Invisible laser radiation may be emitted from disconnected fibers or connectors. Do not stare into beams or view directly with optical instruments. Statement 1051

Contents of the Shipping Box

The shipping box contains the model of the switch you ordered and other components needed for installation. Some components are optional, depending on your order.

Figure 19: Components Delivered in the Shipping Box of Cisco Catalyst 9500 Series Switches

1	Cisco Catalyst 9500 Series switch with optional network module ¹ (power supply and fan modules not shown)	8	Two M4.0 x 20mm Phillips pan-head screws
2	Product documentation and compliance document	9	Ground lug and two screws
3	Two 19-inch mounting brackets	10	Disposable ESD strap
4	Cable guide	11	AC power cord
5	Four number-12 pan-head screws	12	(Optional) RJ-45 console cable ¹
6	Four number-10 pan-head screws	13	(Optional) USB console cable ¹
7	Eight number-8 Phillips flat-head screws	-	-

356709

1	Cisco Catalyst 9500 Series High Performance switch with optional network module ¹ (power supply and fan modules not shown)	8	Two M4.0 x 20mm Phillips pan-head screws
2	Product documentation and compliance document	9	Ground lug and two screws
3	Two 19-inch mounting brackets	10	Disposable ESD strap
4	Cable guide	11	AC power cord
5	Four number-12 pan-head screws	12	(Optional) RJ-45 console cable ¹
6	Four number-10 pan-head screws	13	(Optional) USB console cable ¹
7	Twelve M4.0 x 6mm Phillips flat-head screws	-	-

-
- Note** 1. The item is orderable.
-

Unpacking the Switch

-
- Note** Do not discard the shipping container when you unpack the switch. Flatten the shipping cartons and store them with the pallet. You will need these containers if you need to move or ship the switch in the future.
-

Check the contents of the accessory kit. Verify that you received all listed equipment, which should include the following:

- Grounding lug and disposable ESD strap.
- Optional equipment that you ordered, such as console cables, transceivers, or special connectors.
- Blank covers are installed for the power supply slots on the chassis.

Establishing the System Ground

This section describes how to connect a system ground to the switch.

-
- Caution** Installations that rely solely on system grounding using only an AC third-prong ground run a substantially greater risk of equipment problems and data corruption than those installations that use both the AC third-prong ground and a properly installed system ground.
-

The system ground provides additional grounding for EMI shielding requirements and grounding for the low voltage supplies (DC-DC converters) on the modules. You must observe the following system grounding guidelines for your chassis:

- You must install the system ground connection with any other rack or system power ground connections that you make. The system ground connection is required if FXS modules are installed or if this equipment is installed in a U.S. or European Central Office.
- You must connect both the system ground connection and the power supply ground connection to an earth ground. The system ground connection is required if FXS modules are installed or if this equipment is installed in a U.S. or European Central Office.
- When using DC-input power supplies, you must install the system (ground before you attach the source DC power cables to the DC PEM. Power down the chassis before attaching the system ground.

Note In all situations, grounding practices must comply with Section 250 of the National Electric Code (NEC) requirements or local laws and regulations. A 6 AWG grounding wire is recommended from the chassis to the rack ground or directly to the common bonding network (CBN). The equipment rack should also be connected to the CBN with 6 AWG grounding wire.

Note The system ground serves as the primary safety ground for chassis that are equipped with DC-input power supplies. The DC-input power supplies for these chassis do not have a separate ground.

Required Tools and Equipment

To connect the system ground, you need the following tools and materials:

- Grounding lug — When using the double-hole lug connector provided with the system, the ground wire must be 6 AWG only. Otherwise, a supported closed-loop ring connector must be used for 8-14 AWG wire.
- Grounding screws — Two M4 x 8 mm (metric) pan-head screws. Supplied as part of the accessory kit.
- Grounding wire — Not supplied as part of accessory kit. The grounding wire should be sized according to local and national installation requirements. For U.S. installations, AC power supply systems require a 14 AWG copper conductor. Commercially available 8-14 AWG wire is recommended. DC power supply systems with 930W power supply module require a 12 AWG wire and 1600W power supply module require an 8 AWG wire. The length of the grounding wire depends on the proximity of the switch to proper grounding facilities.
- No. 1 Phillips screwdriver.
- Crimping tool to crimp the grounding wire to the grounding lug.
- Wire-stripping tool to remove the insulation from the grounding wire.

Connecting the System Ground

To establish an earth ground for the chassis, you must attach a grounding cable from the chassis' grounding lug to the rack.

Figure 21: Connecting the System Ground

Procedure

-
- Step 1** Use a wire-stripping tool to remove approximately 0.75 inch (19 mm) of the covering from the end of the grounding wire.
 - Step 2** Insert the stripped end of the grounding wire into the open end of the grounding lug.
 - Step 3** Crimp the grounding wire in the barrel of the grounding lug. Verify that the ground wire is securely attached to the ground lug.
 - Step 4** Place the grounding wire lug against the grounding pad, making sure that there is solid metal-to-metal contact.
 - Step 5** Secure the grounding lug to the chassis with two M4 screws. Ensure that the grounding lug and the grounding wire will not interfere with other switch hardware or rack equipment.
 - Step 6** Prepare the other end of the grounding wire with a ring lug, and secure it to the rack with a screw.
-

Installing the Switch

Rack-Mounting

- For Network Equipment Building Systems (NEBS) installation, use the four post (Number 2) rack mount kit. The depth of the rack, measured between the front-mounting and the rear-mounting strips must be between 25.14 inches and 35.84 inches.
- Ensure you read the Regulatory Compliance and Safety Information (RCSI) before installing the switch.
- Installation in racks other than 19-inch racks requires a bracket kit not included with the switch.

Warning

To prevent bodily injury when mounting or servicing this unit in a rack, you must take special precautions to ensure that the system remains stable. The following guidelines are provided to ensure your safety:

- This unit should be mounted at the bottom of the rack if it is the only unit in the rack.
- When mounting this unit in a partially filled rack, load the rack from the bottom to the top with the heaviest component at the bottom of the rack.
- If the rack is provided with stabilizing devices, install the stabilizers before mounting or servicing the unit in the rack.

Statement 1006

Figure 22: Rack-Mounting Brackets

This figure shows the standard 19-inch brackets and other optional mounting brackets. You can order the optional brackets from your Cisco sales representative.

1	19-inch brackets	3	23-inch brackets
2	Extension rails and brackets for four-point mounting, includes 19-inch brackets.	-	-

Attaching the Rack-Mount Brackets

Procedure

Use four Phillips flat-head screws to attach the long side of the bracket to each side of the switch for the front- or rear-mounting positions.

Figure 23: Attaching 19-inch Rack Mounting Brackets

Figure 24: Attaching 23-inch Rack Mounting Brackets

Figure 25: Front, Middle and Rear Mounting positions of Rack Mounting Brackets

Mounting the Switch a Rack

Procedure

- Step 1** Use the Phillips machine screws to attach the brackets and the extension rail to the switch.

Figure 26: Attaching the Extension Rail

Step 2 Use the black Phillips machine screw to attach the cable guide to the left or right bracket.

Figure 27: Attaching the Cable Guide

1	19-inch bracket	3	Cable guide
2	Phillips machine screws	4	Cable guide screws

Step 3 *Figure 28: Mounting the switch in a rack*

1	Phillips machine screw, black	3	Front-mounting position
2	Cable guide	4	Number-12 or number-10 Phillips machine screws

After Switch Installation

- Configure the switch. For more information, see "Setting up the Switch" topic.
- Connect to the front-panel ports.

CHAPTER 4

Installing a Network Module

- [Network Module Overview, on page 41](#)
- [Installing a Network Module in the Switch, on page 43](#)
- [Removing a Network Module, on page 45](#)
- [Finding the Network Module Serial Number, on page 46](#)

Network Module Overview

Network Module	Description
C9500-NM-8X	<p>This module has eight 10G SFP module ports. Any combination of standard SFP modules are supported.</p> <p>Note This is supported on the following switch models:</p> <ul style="list-style-type: none">• C9500-16X• C9500-40X
C9500-NM-2Q	<p>This module has two 40G QSFP module ports. Any combination of standard QSFP modules are supported.</p> <p>Note This is supported on the following switch models:</p> <ul style="list-style-type: none">• C9500-16X• C9500-40X
Blank Network Module (NM-C4-10G-BLANK)	<p>Insert this blank module when the switch has no uplink ports (this is required for sufficient air flow).</p>

Figure 30: C9500-NM-2Q Network Module

1	QSFP module ports	2	LEDs
---	-------------------	---	------

Figure 31: Blank Network Module

Installing a Network Module in the Switch

Installing a Network Module

Note The switch can operate without a network module, but a blank module (with no ports or SFP slots) is available and should be installed when uplink ports are not required.

Note The switch generates logs when you insert or remove a network module with SFP/SFP+/SFP28 slots.

Use only supported network modules and SFP/SFP+/SFP28/QSFP modules. Each module has an internal serial EEPROM that is encoded with security information.

The network module is hot-swappable. If you remove a module, replace it with another network module or a blank module.

Note The switch complies with EMC, safety, and thermal specifications when a network module is present. If no uplink ports are required, install a blank network module.

Before you begin

When installing network modules, observe these precautions:

- Do not remove the blank module from the slot unless you are installing an SFP/SFP+/SFP28/QSFP module. Either a module or a dust plug must be in the slot at all times.

- Do not remove the dust plugs from the fiber-optic SFP/SFP+/SFP28/QSFP modules or the rubber caps from the fiber-optic cable until you connect the cable. The plugs and caps protect the module ports and cables from contamination and ambient light.
- Removing and installing a network module can shorten its useful life. Do not remove and insert a network module more often than is necessary.
- To prevent ESD damage, follow your normal board and component handling procedures when connecting cables to the switch and other devices.

Procedure

- Step 1** Attach an ESD-preventive wrist strap to your wrist and to an earth ground surface.
- Step 2** Remove the module from the protective packaging.
- Step 3** Remove the blank module from the switch and save it.
- Caution** Verify the correct orientation of your module before installing it. Incorrect installation can damage the module.
- Caution** Do not install the network module with connected cables or installed SFP/SFP+/SFP28 modules. Always remove any cables and modules before you install the network module.
- Caution** A module interface might become error-disabled when a network module with connected fiber-optic cables is installed or removed. If an interface is error-disabled, you can reenabling the interface by using the **shutdown** and **no shutdown** interface configuration commands.
- Step 4** Position the module face up to install it in the module slot. Slide the module into the slot until the back of the module faceplate is flush with the switch faceplate. Secure the network module in place by latch.

Figure 32: Installing the Network Module in the Switch

355477

Removing a Network Module

Note The switch complies with EMC, safety, and thermal specifications when a network module is present. If no uplink ports are required, install a blank network module.

Procedure

Step 1 Attach an ESD-preventive wrist strap to your wrist and to an earth ground surface

Caution Do not remove the network module with connected cables or installed pluggable transceiver modules. Always remove any cables and modules before you remove the network module.

Caution A module interface might become error-disabled when a network module with connected fiber-optic cables is installed or removed. If an interface is error-disabled, you can reenble the interface by using the **shutdown** and **no shutdown** interface configuration commands.

- Step 2** Disconnect the cables from the pluggable transceiver module.
 - Step 3**
 - Step 4** Release latch and carefully slide the network module out of the slot.
 - Step 5** Install a replacement network module or a blank module in the slot.
 - Step 6** Place the module that you removed in an antistatic bag or other protective environment.
-

Finding the Network Module Serial Number

If you contact Cisco Technical Assistance regarding a network module, you need to know its serial number.

Figure 33: Network Module Serial Number Location

CHAPTER 5

Installing Field Replaceable Units

- [Installing a Power Supply](#) , on page 47
- [Installing a Fan Module](#), on page 60
- [Installing an SSD Module](#), on page 64

Installing a Power Supply

Power Supply Overview

The switch chassis has two slots in which you can install power supplies using any of the following combinations:

- Two AC, two DC or AC-DC power supplies
- One AC-input power supply or one DC-input power supply (leaving the blank cover on the other slot)

Note If you leave any power supply slots empty, you must ensure that the blank cover (Part Numbers C9K-PWR-C4-BLANK and C9K-PWR-C5-BLANK) is installed in that slot to maintain the designed airflow.

This table lists the power supply models.

Part Number	Description
PWR-C4-950WAC-R	950W AC Power Supply
C9K-PWR-650WAC-R	650W AC Power Supply
C9K-PWR-1600WAC-R	1600W AC Power Supply
C9K-PWR-930WDC-R	930W DC Power Supply
C9-PWR-950WDC-R	950W DC Power Supply
C9K-PWR-1600WDC-R	1600W DC Power Supply

Figure 34: Cisco Catalyst 650W AC Input Power Supply

---	-----------------

The power supplies can work together in Redundant Mode, in which each power supply operates at approximately 50 percent of its capacity, no greater than 60 percent and no less than 40 percent. If one power supply fails, the other power supply can provide power for the entire system on its own. This is the default and recommended mode.

Power supply modules LED

The AC and DC power supply modules except the 1600W AC and DC power supply modules, have the following LEDs:

- Green indicating the power status
- Amber indicating the power supply failure

Table 18: LEDs on the AC/DC power supply modules

LED	Status	Description
Unlit	Off	No input power.
Green	Blinking	12V aux output is on; 12V main output is off.
	Solid	Both 12V aux output and 12V main output are on; Power supply is functioning normally.
Amber	Blinking	Warning detected. OR AC power cord is not inserted properly.
	Solid	Critical error detected.

The 1600W AC and DC power supply modules have a bi-color (green/amber) LED to indicate the status of the power supplies.

Table 19: LEDs on the 1600W AC/DC power supply modules

LED Status	Description
Off	No input power.
Solid amber	Critical error detected; PSU 12V main output is off.
Solid green	Both 12V aux output and 12V main output are on; Power supply is functioning normally.
1Hz blinking amber	Warning detected; PSU 12V main output is on.
2Hz blinking green	PSU 12V main output is off and 12V aux output is on.

Installation Guidelines

- The switch chassis must be installed in a cabinet or rack that is secured to the data center.
- Remove the power supply from its shipping container and remove any packaging.
- You need the following additional tools and equipment:
 - Nut driver attachment for number 1 Phillips-head screwdriver or ratchet wrench with torque capability (used only for DC-input power supplies).
 - Grounding wire — Size this wire to meet local and national installation requirements. For U.S. installations, you must use an 8-14 AWG copper conductor for AC power supply systems. For installations outside the U.S., consult your local and national electrical codes. The length of the grounding wire depends on the proximity of the switch to proper grounding facilities.
- The chassis is connected to an earth ground.
- You have receptacles for the power sources within reach of the power supply cables.
- If you are connecting to a DC power, check that you are using power cables to connect to the power supply. The wire size applies to the negative [-], and positive [+] cables that connect to negative and positive apertures on the connector. You have to procure the power cable.
- If you are installing more than one DC-input power supply, each must be protected by a dedicated circuit breaker or a fuse that is sized according to the power supply input rating and the local or national electrical code requirements.
- The power sources are rated as follows:
 - For North American AC-input installations—16A with 110V circuits.
 - For North American DC-input installations—(-48 VDC nominal at 37 A in North America (operating range: -40.5 to -56 VDC).
 - For international installations—Size the circuits by local and national standards.
- The power supply is already inserted into the chassis.

**Caution**

Ensure that the power source is OFF. As an added precaution, place the appropriate safety flag and lockout devices at the source power circuit breaker, or place a piece of adhesive tape over the circuit breaker handle to prevent accidental power restoration while you are working on the circuit.

**Warning**

Before performing any of the following procedures, ensure that power is removed from the DC circuit. Statement 1003

Installing Power Supply

Inserting the Power Supply

To insert the power supply into the chassis, follow these steps:

Procedure

-
- Step 1** Remove the blank cover and store it for future use.
 - Step 2** Verify that the power supply is not connected to any power sources.
 - Step 3** Hold the handle on the power supply with one hand and position the power supply with its back end at the open power supply bay. See the figure for an example (AC power supply is shown as an example, DC power supply can be installed in the same way).
 - Step 4** Slide the unit all the way into the power supply bay until the release latch on the front of the power supply clicks and prevents you from moving the power supply in or out of the chassis.

Note Ensure that the power supply is inserted into the slot in the right direction. If you have inserted the power supply in the reverse direction, the amber LED on the power supply blinks continuously.

Figure 39: Installing the Power Supply

Connecting to the Power Source

Each power cable is shipped with mating connectors with one of the connectors on the power socket and the other connector on the front panel of the power supply. You follow the same steps to install the AC-input and DC-input power supplies, but you must ground them differently.

- AC-input power supply—It is automatically grounded when you connect its power cable to the power supply and the power source.
- DC-input power supply—You do not connect the power supply directly to the earth ground.

You use one power cord for each power supply to connect the power supply to its power source.

Connecting to an AC Power Source

To connect to a power source, follow these steps:

Warning Take care when connecting units to the supply circuit so that wiring is not overloaded. Statement 1018

Procedure

Step 1 Prior to connecting the power supply to a power source, ensure that the chassis is properly grounded.

Step 2 Plug the power cable into the power supply.

Step 3 Plug the other end of the power cable into a power source supplied by the data center.

Note When using redundant mode, connect each power supply to a separate power source.

Step 4 Verify that the power supply is receiving power by checking that the LED is on and is amber or red. For more information about the power supply LEDs and the conditions that they indicate, see [Power Supply LEDs](#).

When you first activate the power supply, you can verify the functionality of the LED by checking that LED turns on for a couple of seconds. If the LED is flashing amber or red, check the power connections on the power supply and the power source.

Connecting to a DC Power Source

To connect the DC power supply directly to one or two DC power sources, follow these steps:

Warning Before performing any of the following procedures, ensure that power is removed from the DC circuit. **Statement 1003**

Warning Hazardous voltage or energy may be present on DC power terminals. Always replace cover when terminals are not in service. Be sure uninsulated conductors are not accessible when cover is in place. **Statement 1075.**

Procedure

Step 1 Prior to connecting the power supply to a power source, ensure that the chassis is properly grounded.

Step 2 Plug the DC power cable into the DC power supply.

Step 3 Turn off the power at the circuit breakers for the portions of the DC grid power that you are connecting to and verify that all of the LEDs on the DC grid power supplies are off.

Step 4 Depending on the power supply installed, install the two cables from the DC power supply to the DC power source as follows:

- If you are using C9K-PWR-1600WDC-R or C9K-PWR-930WDC-R, do the following:
 - a. If the unconnected end of each power cable is not stripped of its insulation for the last 0.75 inches (19 mm), use wire strippers to remove that amount of insulation.
 - b. Attach the negative cables to the negative terminals of a DC power source, and attach the positive cables to the positive terminals of the same power source.

1	Positive terminal	2	Negative terminal
---	-------------------	---	-------------------

- If you are using PWR-C4-950WDC-R, do the following:
 - a. Remove the safety cover on the terminal box on the front of the DC power supply.

Figure 40: Remove the Safety Cover

356233

- b. Loosen and unscrew the two nuts on the terminal box. The terminal box has two slots for power terminals. Each terminal has a nut that you use to fasten the power cable to the terminal.

Figure 41: Removing the Nuts on the Terminal Box

356231

- c. Secure the positive (+) DC power cable lug to the RTN terminal and the negative (–) DC power cable lug to the –48V terminal with the nuts.

To tighten the nuts, apply torque between 7 lbf.in (0.8Nm) and 10lbf.in (1.1 Nm) to each nut.

- d. Replace the safety cover over the terminal box on the DC power supply.

Step 5

Verify that the power supply is receiving power by checking that the LED is on and is amber or red. For more information about the power supply LEDs and the conditions that they indicate, see [Power Supply LEDs](#).

When you first activate the power supply, you can verify the functionality of the LED by checking that LED turns on for a couple of seconds. If the LED is flashing amber or red, check the power connections on the power supply and the power source.

Removing Power Supplies

Procedure

-
- Step 1** Turn off the power to the power supply that you are removing, as follows:
- If you are removing a DC-input power supply, ensure that the power is turned off at the power source by turning off the power for that circuit.
- Step 2** Detach the power and ground cables, as follows:
- For the AC-input power supply, unplug the power cables that are attached to the power supply and the power source.
 - For the DC-input power supply, remove the power cables from the power supply and the power source.
- Step 3** Remove the power supply from the chassis, as follows:
- a) Press the ejector latch on the right of the power supply.
 - b) Pull the power supply partially out of the slot by its handle.
 - c) Pull the power supply fully from the slot.
- Caution** If you intend to operate the switch without installing another power supply in the empty slot, then you must reinstall the blank cover over the empty power supply slot to ensure proper air flow in the system and for safety reasons.
-

Finding the Serial Number

If you contact Cisco Technical Assistance, you need to know the serial number. These figures show where the serial number is located. You can also use the **show inventory EXEC** command to see the serial number.

Figure 42: Serial Number on the Power Supply

Installing a Fan Module

Fan Module Overview

Depending on the switch model, 5 individual fan modules or 2 fan trays with dual-stacked fan modules are available. In models using 5 fan modules, the switch can operate with 4 operational fans and 1 nonfunctional fan, but the failed fan should be replaced as soon as possible to avoid a service interruption due to a second fan fault.

For the switch to boot-up, ensure the following conditions are met.

- the switches using FAN-T4-R modules must have at the minimum 4 fans operating normally
- the switches using C9K-T1-FANTRAY modules must have 2 fan tray modules with all the fans operating normally

If the switch fails to meet the minimum number of required fans, the switch shuts down automatically to prevent the system from overheating.

Table 20: Supported Fan Modules

Part Number	Description
C9K-T1-FANTRAY	<ul style="list-style-type: none"> • Supported on switches, C9500-32QC, C9500-24Y4C, and C9500-48Y4C. • Each switch contains two fan tray units with dual-stacked fans. • Functions in the event of the failure of one of the fans in the fan tray unit. The individual fans are not field replaceable, you must replace the fan unit.
FAN-T4-R	<ul style="list-style-type: none"> • Supported on switches, C9500-32C, C9500-12Q, C9500-16X, C9500-24Q, and C9500-40X. • Each switch contains five individual fan modules operating in N+1 redundancy mode. • Type 4 hot-swappable fan module.

Figure 43: FAN-T4-R Fan Module

1	Fan assembly levers	3	Fan LED
2	Fan	4	Fan assembly retention latch

Figure 44: Fan Tray Unit with Dual-Stacked Fans

1	Fan LED	3	Fan assembly retention latch
2	Fan assembly levers	4	Fans

Installation Guidelines

Observe these guidelines when removing or installing a fan module:

- Do not force the fan module into the slot. This can damage the pins on the switch if they are not aligned with the module.
- A fan module that is only partially connected to the switch can disrupt the system operation.
- The switch supports hot swapping of the fan module. You can remove and replace the module without interrupting normal switch operation.

Warning

Only trained and qualified personnel should be allowed to install, replace, or service this equipment. Statement 1030

Installing a Fan Module

Procedure

Step 1 Pinch the fan module release handle and slide the module out.

Caution You should replace the fan module within 5 minutes to avoid overheating the switch.

Step 2 Install the fan module in the fan slot, and firmly push it into the slot, applying pressure to the end of the module, not the extraction handles. When correctly inserted, the fan module is flush with the switch rear panel. When the fan is operating, a green LED is on in the top left corner of the fan.

Warning Do not reach into a vacant slot when installing or removing a module. Exposed circuitry is an energy hazard. Statement 206

Figure 45: Installing the Fan Module

Finding the Fan Module Serial Number

If you contact Cisco Technical Assistance regarding a fan module, you need to know the fan module serial number. See the following illustration to find the serial number.

Figure 46: Fan Module Serial Number

Installing an SSD Module

SATA SSD Module Overview

SATA SSD module is available as a field-replaceable unit (FRU). The SSD module has a button which facilitates hot-swapping of the module. To prevent data loss, press the hot-swap button to request removal and wait for the system to confirm safe-removal by turning off the status LED.

Figure 47: SATA SSD

1	Status LED	3	Blue beacon LED
2	Hot-swap button		

The following table lists the SATA SSD modules supported on Cisco Catalyst 9500 Series High Performance Switches.

Table 21: SATA SSD modules

SATA SSD	Description
C9K-F1-SSD-240G	Cisco Catalyst 9500 Series 240GB SATA memory

SATA SSD	Description
C9K-F1-SSD-480G	Cisco Catalyst 9500 Series 480GB SATA memory
C9K-F1-SSD-960G	Cisco Catalyst 9500 Series 960GB SATA memory

Installing an SSD Module

Procedure

- Step 1** Remove the blank cover on the SSD module slot on the switch and store it for future use.
- Step 2** Insert the SSD module into the USB 3.0 SSD module slot, and firmly push it into the slot.

- Step 3** Verify that the LED on the SSD module turns solid green.

Removing an SSD Module

Procedure

- Step 1** Press and hold the hot-swap button on the SSD module for at least four seconds.
- The system powers down the SSD module and the port and the LED turns off indicating that the module is ready for removal.
- Also, the switch console displays the following messages indicating safe removal.

```
*Mar 12 11:22:22.285: %IOSXE-3-PLATFORM: R0/0: kernel: atal: irq_stat
0x00400040, connection status changed
*Mar 12 11:22:28.310: %IOSXE-4-PLATFORM: R0/0: kernel: atal: limiting
SATA link speed to 1.5 Gbps
*Mar 12 11:22:33.613: %IOSXE-4-PLATFORM: R0/0: kernel: atal.00: disabled
```

Step 2 Remove the SSD module from the module slot and insert the blank slot cover.

If you are replacing the SSD module, insert the new module into the slot. For more information, see [Installing an SSD Module, on page 65](#).

CHAPTER 6

Troubleshooting

- [Getting Started, on page 67](#)
- [Solving Problems at the System Component Level, on page 67](#)
- [Identifying Startup Problems, on page 68](#)
- [Troubleshooting the Power Supply, on page 68](#)
- [Troubleshooting the Fan Tray , on page 69](#)
- [Status LED Indicators, on page 69](#)
- [Contacting Cisco Customer Service, on page 69](#)
- [Finding the Serial Number, on page 70](#)

Getting Started

When the initial system startup is complete, verify the following:

- Power supplies are supplying power to the system.
- The fan tray assembly is operating.
- System software boots successfully.

If one or more of the above conditions are not met, use the procedures described in this chapter to isolate and, if possible, resolve the problem. If all of the above conditions are met, and the hardware installation is complete, refer to your software release notes for hardware support information and software caveats.

Solving Problems at the System Component Level

The key to success when troubleshooting the system is to isolate the problem to a specific system component. The first step is to compare what the system *is doing* to what it *should be doing*. Because a startup problem can usually be attributed to a single component, it is more efficient to isolate the problem to a subsystem rather than troubleshoot each separate component in the system.

The switch consists of these subsystems:

- Power supplies
- Fan tray assembly

The chassis fan tray assembly should operate whenever system power is on. You should see the FAN LED turn green and hear the fan tray assembly operating. A red or amber FAN LED indicates that one or more fans in the fan tray assembly is not operating. You should immediately contact a Customer Service representative if the fan tray assembly is not functioning properly. There are no installation adjustments that you can make if the fan tray assembly does not function properly at initial startup.

Identifying Startup Problems

LEDs indicate all system states in the startup sequence. By checking the LEDs, you can determine when and where the system failed in the startup sequence.

Procedure

- Step 1** Turn on the power supplies. You should immediately hear the system fan tray assembly begin to operate.
- Step 2** If the startup information and system banner do not display at startup, verify that the terminal is set correctly and that it is connected properly to the console port.
-

Troubleshooting the Power Supply

If the Power Supply LED does not light after you turn on the power switch, follow these steps to isolate a power subsystem problem:

Procedure

- Step 1** Verify that the Power Supply LED on the power supply is green.
- If the Power Supply LED is green, the AC or DC source is good and the power supply is functional.
 - If the Power Supply LED remains off, there might be a problem with the AC source, the DC source, or the power cable.
 - Turn off the power to the switch, connect the power cord to another power source if one is available, and turn on the power.
 - If the Power Supply LED is green, the problem is the first power source.
 - If the Power Supply LED fails to light after you connect the power supply to a new power source, replace the power cord, and turn on the switch.
 - If the Power Supply LED then goes on, return the first power cord for replacement.

If this unit has more than one power cord, repeat Step 1 for each power supply.

If the Power Supply LED still fails to light when the switch is connected to a different power source with a new power cord, the power supply is probably faulty.

If a second power supply is available, install it in the second power supply bay, and contact a customer service representative for further instructions.

Step 2 If you have a second power supply, repeat Step 1 for this power supply.

What to do next

If you are unable to resolve the problem or if you determine that either a power supply or backplane connector is faulty, see [Contacting Cisco Customer Service, on page 69](#).

Troubleshooting the Fan Tray

To isolate a fan tray problem, follow these steps:

Procedure

- Step 1** Verify that the FAN LED on the fan tray is green.
- If the FAN LED is not green, see [Fan LED, on page 22](#) to determine whether or not the power subsystem is functioning properly.
- Step 2** Check to determine if the FAN LED is red or amber. If the FAN LED is red, one or more fans' tachometer faults have exceeded the maximum limit. If the FAN LED is amber, one or more fans have encountered tachometer faults.
- Do the following:
- To ensure that the fan tray is seated properly, loosen the captive installation screws, remove the fan tray, and reinstall it.
 - Tighten all captive installation screws, and then restart the system.
 - If the FAN LED is still red or amber, the system detects an individual fan failure. Contact a customer service representative for instructions.
-

Status LED Indicators

Refer to "System LED" section in the "Product Overview" chapter. More details will be added here later.

Contacting Cisco Customer Service

If you are unable to solve a startup problem after using the troubleshooting suggestions in this chapter, contact a Cisco customer service representative for assistance and additional instructions. Before you call, have the following information ready to help your service provider assist you as quickly as possible:

- Date on which you received the switch
- Chassis serial number
- Type of software and release number
- Maintenance agreement or warranty information
- Brief description of the problem
- Brief explanation of the steps you have already taken to isolate and resolve the problem

Finding the Serial Number

If you contact Cisco Technical Assistance, you need to know the switch serial number. The figure shows where the serial number is located. You can also use the **show version** privileged EXEC command to see the serial number.

Figure 48: Serial Number Location and Switch Labels

Serial number of the switch is located at the top of the switch. Following illustrations show all the labels at the top and the bottom of the switch.

1	Mult1 Power Warning	6	Serial Number
2	Fan Tray Warning	7	Laser Warning
3	RFID	8	Caution ESD
4	CLEI	9	Lab Altitude
5	MAC Number	10	Compliance label

APPENDIX **A**

Technical Specifications

- [Technical Specifications, on page 71](#)

Technical Specifications

This table describes the environmental specifications.

Table 22: Environmental Specifications for the Switch

Environmental Ranges	
Operating temperature	32 to 104°F (0 to 40°C)
Storage temperature	–4 to 149°F (–20 to 65°C)
Relative humidity	Operating : 5 to 90% (noncondensing) Non-Operating : 5% to 95% (noncondensing)
Operating altitude	Up to 6000 ft (1800 m)
Storage altitude	Up to 15,000 ft (4500 m)

Table 23: Acoustic Measurements for the Switches

	Switch Model	Sound Power Level
Cisco Catalyst 9500 Series Switches	C9500-12Q	No greater than 70.4 L _{WA} d dB
	C9500-24Q	No greater than 70.4 L _{WA} d dB
	C9500-16X	No greater than 68.3 L _{WA} d dB
	C9500-40X	No greater than 68.3 L _{WA} d dB

	Switch Model	Sound Power Level
Cisco Catalyst 9500 Series High Performance Switches	C9500-32C	No greater than 76.7 L _{WAd} dB
	C9500-32QC	No greater than 72.1 L _{WAd} dB
	C9500-24Y4C	No greater than 71.5 L _{WAd} dB
	C9500-48Y4C	No greater than 71.5 L _{WAd} dB

This table describes the physical specifications.

3	TP1+	
4	TP2+	
5	TP2-	
6	TP1-	
7	TP3+	
8	TP3-	

SFP Module Connectors

Figure 50: Duplex LC Cable Connector

Figure 51: Simplex LC Cable Connector

Figure 52: Copper SFP Module LC Connector

Console Port

The switch has two console ports: a USB 5-pin mini-Type B port on the front panel and an RJ-45 console port on the rear panel.

Figure 53: USB Mini-Type B Port

The USB console port uses a USB Type A to 5-pin mini-Type B cable. The USB Type A-to-USB mini-Type B cable is not supplied. You can order an accessory kit (part number 800-33434) that contains this cable.

Figure 54: USB Type A-to-USB 5-Pin Mini-Type B Cable

The RJ-45 console port uses an 8-pin RJ-45 connection. The supplied RJ-45-to-DB-9 adapter cable is used to connect the console port of the switch to a console PC. You need to provide a RJ-45-to-DB-25 female DTE adapter if you want to connect the switch console port to a terminal.

Cables and Adapters

Transceiver Module Network Cables

For cabling specifications, refer to the following notes:

- [Cisco SFP and SFP+ Transceiver Module Installation Notes](#)
- [Cisco 40-Gigabit QSFP+ Transceiver Modules Installation Note](#)

Each port must match the wavelength specifications on the other end of the cable, and the cable must not exceed the stipulated cable length. Copper 1000BASE-T SFP module transceivers use standard four twisted-pair, Category 5 cable at lengths up to 328 feet (100 meters).

Cable Pinouts

Figure 55: Four Twisted-Pair Straight-Through Cable Schematic

Figure 56: Four Twisted-Pair Semi-Cross Cable Schematic

Figure 57: Two Twisted-Pair Straight-Through Cable Schematic**Figure 58: Two Twisted-Pair Crossover Cable Schematic**

Identifying a Crossover Cable

To identify a crossover cable, compare the two modular ends of the cable. Hold the cable ends side-by-side, with the tab at the back. The wire connected to the pin on the outside of the left plug should be a different color from the wire connected to the pin on the inside of the right plug.

Figure 59: Identifying a Crossover Cable

Console Port Adapter Pinouts

The RS-232 console port uses an 8-pin RJ-45 connector. Use an RJ-45-to-DB-9 adapter cable to connect the switch console port to a console PC. You need to provide a RJ-45-to-DB-25 female DTE adapter to connect the switch console port to a terminal.

Table 26: Console Port Signaling with a DB-9 Adapter

APPENDIX C

Configuring the Switch

- [Configuring the Switch Using the Web User Interface, on page 81](#)
- [Configuring the Switch Using the CLI, on page 96](#)

Configuring the Switch Using the Web User Interface

Setting up the Switch

After you complete the hardware installation, you need to setup the switch with configuration required to enable traffic to pass through the network. On your first day with your new device, you can perform a number of tasks to ensure that your device is online, reachable and easily configured.

The Web User Interface (Web UI) is an embedded GUI-based device-management tool that provides the ability to provision the device, to simplify device deployment and manageability, and to enhance the user experience. It comes with the default image, so there is no need to enable anything or install any license on the device. You can use WebUI to build configurations, and to monitor and troubleshoot the device without having CLI expertise.

Connecting to the Switch

Before you begin

Set up the DHCP Client Identifier on the client to get the IP address from the switch, and to be able to authenticate with Day 0 login credentials.

Setting up the DHCP Client Identifier on the client for Windows

1. Type **regedit** in the Windows search box on the taskbar and press *enter*.
2. If prompted by User Account Control, click **Yes** to open the Registry Editor.
3. Navigate to

Computer\HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters\Interfaces and locate the **Ethernet Interface** Global Unique Identifier (GUID).

4. Add a new REG_BINARY **DhcpClientIdentifier** with Data **77 65 62 75 69** for **webui**. You need to manually type in the value.

Figure 60: Setting up DHCP Client Identifier on Windows

- Restart the PC for the configuration to take effect.

Setting up the DHCP Client Identifier on the client for MAC

- Go to **System Preferences > Network > Advanced > TCP > DHCP Client ID:** and enter **webui**.

Figure 61: Setting up DHCP Client Identifier on MAC

2. Click **OK** to save the changes.

The bootup script runs the configuration wizard, which prompts you for basic configuration input: (**Would you like to enter the initial configuration dialog? [yes/no]:**). To configure Day 0 settings using the web UI, do not enter a response. Perform the following tasks instead:

Procedure

-
- Step 1** Make sure that no devices are connected to the switch.
 - Step 2** Connect one end of an ethernet cable to one of the downlink (non-management) ports on the active supervisor and the other end of the ethernet cable to the host (PC/MAC).
 - Step 3** Set up your PC/MAC as a DHCP client, to obtain the IP address of the switch automatically. You should get an IP address within the 192.168.1.x/24 range.

Figure 62: Obtaining the IP Address

It may take up to three mins. You must complete the Day 0 setup through the web UI before using the device terminal.

Step 4 Launch a web browser on the PC and enter the device IP address (**https://192.168.1.1**) in the address bar.

Step 5 Enter the Day 0 **username webui** and **password serial number** of the switch. Note that the serial number is case sensitive.

Note The Day 0 username and password depends on the software version of your switch.

For Cisco Catalyst switches running software versions earlier than Cisco IOS XE Fuji 16.9.x, the default username is **webui**; the default password is the serial number of the switch chassis.

For Cisco Catalyst switches running software version Cisco IOS XE Amsterdam 17.1.x, the default username is **webui**; the default password is **cisco**.

What to do next

Create a user account.

Creating User Accounts

Setting a username and password is the first task you will perform on your device. Typically, as a network administrator, you will want to control access to your device and prevent unauthorized users from seeing your network configuration or manipulating your settings.

Procedure

Step 1 Log on using the default username and password provided with the device. These details differ based on the software version of your switch.

The default username is **cisco**; the default password is the serial number of the switch chassis. For Cisco Catalyst switches running software versions earlier than Cisco IOS XE Fuji 16.9.x, the default username is **webui**; the default password is the serial number of the switch chassis.

Step 2 Set a password of up to 25 alphanumeric characters. The username password combination you set gives you privilege 15 access. The string cannot start with a number, is case sensitive, and allows spaces but ignores leading spaces.

Figure 63: Create Account

Choosing Setup Options

Select **Wired Network** to configure your device based on a site profile, and continue to configure switch wide settings. Otherwise, continue to the next step and configure only basic settings for your device.

Configuring Basic Device Settings

On the **Basic Device Settings** page configure the following information:

Procedure

- Step 1** In the **Device ID and Location Settings** section, type a unique name to identify your device in the network.
- Step 2** Choose the date and time settings for your device. To synchronize your device with a valid outside timing mechanism, such as an NTP clock source, choose Automatic, or choose Manual to set it yourself.

Figure 64: Basic Settings - Device ID and Location Settings

- Step 3** In the **Device Management Settings** section, assign an **IP address** to the management interface. Ensure that the IP address you assign is part of the subnet mask you enter.
- Step 4** Optionally, enter an **IP address** to specify the default gateway.
- Step 5** To enable access to the device using telnet, check the **Telnet** check box.
- Step 6** To enable secure remote access to the device using Secure Shell (SSH), check the **SSH** check box.
- Step 7** Check the **VTP transparent mode** check box to disable the device from participating in VTP.

If you did not select **Wired Network**, in the earlier step, continue to the next screen to verify your configuration on the **Day 0 Config Summary** screen, and click **Finish**. To automatically configure your device based on a site profile, click **Setup Options**, and select **Wired Network**.

Figure 65: Basic Settings - Device Management Settings

Configuring Your Device Based on a Site Profile

To ease your configuration tasks and save time, choose a site profile based on where your device may be installed and managed in your network. Based on the site profile you choose, your device is automatically configured according to Cisco best practices. You can easily modify this default configuration, from the corresponding detailed configuration screens.

Choosing a site profile as part of Quick Setup allows you to configure your device based on the business needs of your enterprise. For example, you could use your device as an access switch, to connect client nodes and endpoints on your network, or as a distribution switch, to route packets between subnets and VLANs.

Table 28: Default Configuration Loaded with Each Site Profile (Access Switches)

Setting	Single Access Switch (Single Uplink)	Single Access Switch (Single Port Channel Uplink)	Single Access Switch (Redundant Port Channel Uplink)
Hostname	The hostname or device name you provided as part of Quick Setup	The hostname or device name you provided as part of Quick Setup	The hostname or device name you provided as part of Quick Setup

Figure 70: Site Profile - Core Switches

Configuring Switch Wide Settings

Configuring VLAN Settings

Procedure

- Step 1** In the **VLAN Configuration** section, you can configure both data and voice VLANs. Type a name for your data VLAN.

- Step 2** To configure a data VLAN, ensure that the **Data VLAN** check box is checked, type a name for your VLAN, and assign a VLAN ID to it. If you are creating several VLANs, indicate only a VLAN range.
- Step 3** To configure a voice VLAN, ensure that the **Voice VLAN** check box is checked, type a name for your VLAN, and assign a VLAN ID to it. If you are creating several VLANs, indicate a VLAN range.

Configure STP Settings

Procedure

- Step 1** RPVST is the default STP mode configured on your device. You can change it to PVST from the **STP Mode** drop-down list.
- Step 2** To change a bridge priority number from the default value 32768, change **Bridge Priority** to Yes and choose a priority number from the drop-down list.

Figure 71: VLAN and STP Settings

The screenshot shows the Cisco Configuration Setup Wizard interface. The wizard is currently on the 'SWITCH WIDE SETTINGS' step, which is highlighted with a blue checkmark. The previous steps are 'CREATE ACCOUNT', 'BASIC SETTINGS', and 'SITE PROFILE', also marked with checkmarks. The next steps are 'PORT SETTINGS' and 'SUMMARY', which are not yet completed. The main content area is divided into three sections: 'VLAN Configuration', 'STP Configuration', and 'General Configuration'. In the 'VLAN Configuration' section, there are three checkboxes: 'Data VLAN', 'Voice VLAN', and 'Management VLSwitch Wide Settings', all of which are currently unchecked. In the 'STP Configuration' section, there are two dropdown menus: 'STP Mode' is set to 'RPVST' and 'Bridge Priority' is set to '32768'. The 'Bridge Priority' dropdown is currently expanded, showing a list of values. In the 'General Configuration' section, there are two buttons: '< Site Profile' and 'Port Settings >'. On the right side of the wizard, there is a 'HELP AND TIPS' section with a blue background. It contains a list of tips, including: 'A data VLAN is a VLAN that is configured to carry user-generated traffic. Voice VLAN allows you to enhance VoIP service by configuring ports to carry IPvoice traffic from IP phones on a specific VLAN.', 'STP is to prevent bridge loops and the broadcast radiation that results from them.', 'The part of a network address which identifies it as belonging to a particular domain.', 'Configure Syslog Client within the Cisco Device, use a severity level of warnings through emergencies to generate error message about software and hardware malfunctions.', and 'Protocol for network management and its collecting information from, and configuring, network devices, such as switches, and routers on an IP network.'

Configuring DHCP, NTP, DNS and SNMP Settings

Procedure

- Step 1** In the **Domain Details** section, enter a domain name that the software uses to complete unqualified hostnames.
- Step 2** Type an IP address to identify the DNS server. This server is used for name and address resolution on your device.
- Step 3** In the **Server Details** section, type the IP address of the DNS server that you want to make available to DHCP clients.
- Step 4** In the **Syslog Server** field, type the IP address of the server to which you want to send syslog messages.
- Step 5** To ensure that your device is configured with the right time, date and timezone, enter the IP address of the NTP server with which you want to synchronize the device time.

- Step 6** In the **Management Details** section, type an IP address to identify the SNMP server. SNMPv1, SNMPv2, and SNMPv3 are supported on your device.
- Step 7** Specify the **SNMP community** string to permit access to the SNMP protocol.

Figure 72: DHCP, NTP, DNS and SNMP Settings

The screenshot shows the Cisco Configuration Setup Wizard interface. The wizard is titled "Configuration Setup Wizard" and has a progress bar at the top with six steps: CREATE ACCOUNT, BASIC SETTINGS, SITE PROFILE, SWITCH WIDE SETTINGS, PORT SETTINGS, and SUMMARY. The "SITE PROFILE" step is currently active. Below the progress bar, the "General Configuration" section is visible. It is divided into three sub-sections: "Domain Details", "Server Details", and "Management Details".

Domain Details:

- Domain Name:
- DNS Server:

Server Details:

- DHCP Server:
- Syslog Server:
- NTP Server:

Management Details:

- SNMPv1 Community:
- SNMPv2 Community:
- SNMPv3 Community:

At the bottom of the wizard, there are two buttons: "< Site Profile" and "Port Settings >". On the right side of the wizard, there is a "HELP AND TIPS" section with the following text:

A data VLAN is a VLAN that is configured to carry user-generated traffic. Voice VLAN allows you to enhance VoIP service by configuring ports to carry IPvoice traffic from IP phones on a specific VLAN.

STP is to prevent bridge loops and the broadcast radiation that results from them.

The part of a network address which identifies it as belonging to a particular domain.

Configure Syslog Client within the Cisco Device, use a severity level of warnings through emergencies to generate error message about software and hardware malfunctions.

- Protocol for network management and its collecting information from, and configuring, network devices, such as switches, and routers on an IP network.

What to do next

Configure port settings.

Configuring Port Settings

Procedure

- Step 1** Based on the site profile chosen in the earlier step which is displayed in the left-pane, select the **Port Role** from among the following options:
- Uplink – For connecting to devices towards the core of the network.
 - Downlink – For connecting to devices further down in the network topology.
 - Access – For connecting guest devices that are VLAN-unaware.
- Step 2** Choose an option from the **Select Switch** drop-down list.
- Step 3** Make selections from the **Available** list of interfaces based on how you want to enable them and move them to the **Enabled** list.

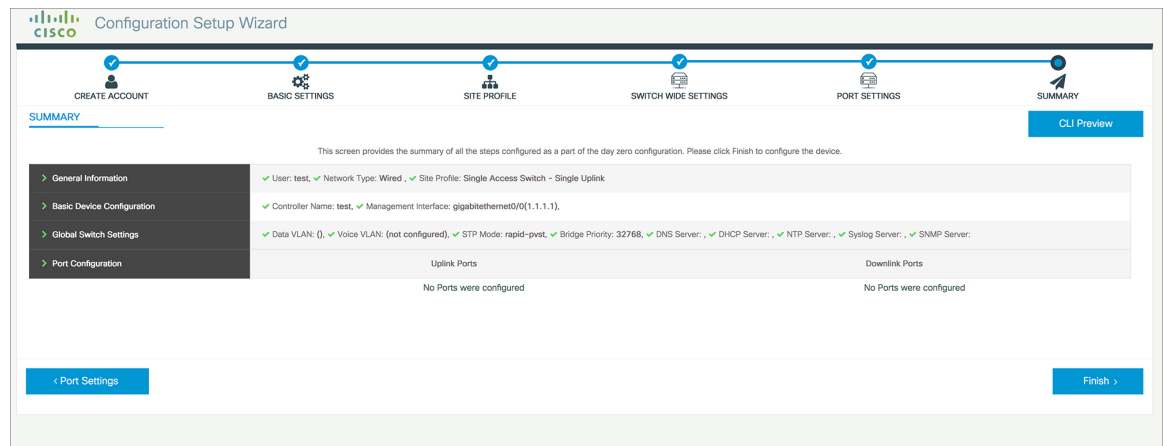

Figure 73: Port Settings

What to do next

- Click **Day 0 Config Summary** to verify your setup.
- Click **Finish**.

Figure 74: Day 0 Config Summary

Configuring VTY Lines

For connecting to the device through Telnet or SSH, the Virtual Terminal Lines or Virtual TeleType (VTY) is used. The number of VTY lines is the maximum number of simultaneous access to the device remotely. If the device is not configured with sufficient number of VTY lines, users might face issues with connecting to the WebUI. You must change the default value for VTY Line, 0-15 (or 0-4 in some models), to 0-30 to allow up to thirty simultaneous sessions.

Procedure

- Step 1** From the WebUI, navigate through **Administration > Device** and select the **General** page.
- Step 2** In the **VTY Line** field, enter **0-30**.

Figure 75: Configuring VTY Line

The screenshot displays the WebUI configuration page for the VTY Line. The breadcrumb navigation is 'Administration > Device'. The left sidebar shows the 'Administration' menu item is active. The main configuration area is divided into sections: 'General' (selected), 'FTP/SFTP/TFTP', and 'Bluetooth'. Under the 'General' section, there are several configuration fields: 'IP Routing' (DISABLED), 'Host Name*' (SW-9200), 'Banner' (empty), 'Management Interface' (GigabitEthernet0/0), 'IP Address*' (empty), 'Subnet Mask*' (empty), 'System MTU(Bytes)' (1500), 'VTY Line' (0-30), and 'VTY Transport Mode' (Select a value). A link 'View VTY options' is located to the right of the VTY Line field.

Configuring the Switch Using the CLI

Accessing the CLI Through the Console Port

You can access the CLI on a configured or unconfigured switch by connecting the RJ-45 console port or USB console port of the switch to your PC or workstation and accessing the switch through a terminal emulation program.

- Note** If you have stacked your switches, connect to the console port of one of the switches in the stack. You can initially configure the entire stack from any member switch.

Connecting the RJ-45 Console Port

Procedure

- Step 1** Connect the RJ-45-to-DB-9 adapter cable to the 9-pin serial port on the PC. Connect the other end of the cable to the switch console port.

- Step 2** Start the terminal-emulation program on the PC or the terminal. The program, frequently a PC application such as HyperTerminal or ProcommPlus, makes communication between the switch and your PC or terminal possible.
- Step 3** Configure the baud rate and character format of the PC or terminal to match the console port default characteristics:
- 9600 baud
 - 8 data bits
 - 1 stop bit
 - No parity
 - None (flow control)
- Step 4** Power on the switch as described in the switch getting started guide.
- Step 5** The PC or terminal displays the bootloader sequence. Press **Enter** to display the setup prompt.
-

Connecting the USB Console Port

Procedure

- Step 1** If you are connecting the switch USB console port to a Windows-based PC for the first time, install the USB driver. See [Installing the Cisco Microsoft Windows USB Device Driver, on page 98](#).
- Note** USB Type A port on the switch provides file system support and is **NOT** a console port. See USB Type A Port section.
- Step 2** Connect a USB cable to the PC USB port. Connect the other end of the cable to the switch mini-B (5-pin-connector) USB console port.
- Step 3** Start the terminal-emulation program on the PC or the terminal. The program, frequently a PC application such as HyperTerminal or ProcommPlus, makes communication between the switch and your PC or terminal possible.
- Step 4** Configure the baud rate and character format of the PC or terminal to match the console port default characteristics:
- 9600 baud
 - 8 data bits
 - 1 stop bit
 - No parity
 - None (flow control)
- Step 5** Power on the switch as described in the switch getting started guide.

- Step 6** The PC or terminal displays the bootloader sequence. Press **Enter** to display the setup prompt. Follow the steps in the Setup program.
-

Installing the Cisco Microsoft Windows USB Device Driver

A USB device driver must be installed the first time a Microsoft Windows-based PC is connected to the USB console port on the switch.

Installing the Cisco Microsoft Windows 7 USB Driver

Procedure

- Step 1** Obtain the Cisco USB console driver file from the Cisco.com web site and unzip it.
- Note** You can download the driver file from the Cisco.com site for downloading the switch software.
- Step 2** If using 32-bit Windows 7, double-click the setup.exe file in the Windows_32 folder. If using 64-bit Windows 7, double-click the setup(x64).exe file in the Windows_64 folder.
- Step 3** The Cisco Virtual Com InstallShield Wizard begins. Click **Next**.
- Step 4** The Ready to Install the Program window appears. Click **Install**.
- Note** If a User Account Control warning appears, click **Allow - I trust this program** to proceed.
- Step 5** The InstallShield Wizard Completed window appears. Click **Finish**.
- Step 6** Connect the USB cable to the PC and the switch console port. The USB console port LED turns green, and the Found New Hardware Wizard appears. Follow the instructions to complete the driver installation.
-

Uninstalling the Cisco Microsoft Windows USB Driver

Uninstalling the Cisco Microsoft Windows 7 USB Driver

Before you begin

Disconnect the switch console terminal before uninstalling the driver.

Procedure

- Step 1** Run setup.exe for Windows 32-bit or setup(x64).exe for Windows-64bit. Click **Next**.
- Step 2** The InstallShield Wizard for Cisco Virtual Com appears. Click **Next**.
- Step 3** When the Program Maintenance window appears, select the Remove radio button. Click **Next**.
- Step 4** When the Remove the Program window appears, click **Remove**.
- Note** If a User Account Control warning appears, click **Allow - I trust this program** to proceed.

Step 5 When the InstallShield Wizard Completed window appears, click **Finish**.
