5. Select “CAMERA IP ADDRESS,” and use the [VALUE] knob to specify the IP address that’s assigned to the camera.
6. Press the [VALUE] knob to confirm the settings.
7. If a login name and password have been specified for the password, specify the “LOGIN NAME” and “PASSWORD.”
8. Repeat steps 1 through 7 for each of your cameras.

Registering Camera Movements

For each camera you can register eight movements.

1. Select a “CAMERA ID,” and use the [VALUE] knob to select the camera for which you want to register a movement.
2. Press the [VALUE] knob to confirm the settings.
3. In “PAN,” select “TALLY CH” and use the [VALUE] knob to specify the camera movement.
For details on each item, refer to “13: CAMERA CONTROL” (p. 13).

The camera movement is registered.
6. Repeat steps 1 through 5 for each of your cameras.

Changing the Camera’s Operating Mode

1. Long-press the [MODE] button so that it is illuminated in light blue.

The unit’s display indicates “CAMERA PRESET” and “CAMERA ID,” and it enters camera operation mode.

MEMO

If you set [MENU] button → “CAMERA CONTROL” → “ALL CAMERA RECALL” to “ON,” the display indicates “ALL CAMERAS” instead of “CAMERA ID.”

Changing the Camera to Operate

1. Turn the [VALUE] knob.

In the unit's display, the "CAMERA ID" changes.

MEMO

If you set [MENU] button → "CAMERA CONTROL" → "ALL CAMERA RECALL" to "ON," turning the [VALUE] knob will not change this.

Recalling a Registered Camera Movement

1. Press one of the AUX/MEMORY [1]–[8] buttons.

The PRESET 1–8 that you specified ahead of time are assigned to the AUX/MEMORY [1]–[8] buttons respectively.

MEMO

If you set [MENU] button → "CAMERA CONTROL" → "ALL CAMERA RECALL" to "ON," and press an AUX/MEMORY [1]–[8] button, the movement of not just one camera but the registered settings of all cameras are recalled in a single operation.

Exiting Camera Operating Mode

1. Press the [MODE] button to make it light green or blue.

Control Using the TALLY/GPI Connector

Inputting a Control Signal

To operate the V-60HD remotely using control-signal input, you first assign the function to a GPI channel (1 through 8).

1. Select the [MENU] button → "RS-232/GPI" → "GPI 1 TYPE" through "GPI 8 TYPE."

2. Use the [VALUE] knob to specify the function to assign to the GPI channel (1 through 8).

Value	Explanation
N/A	No function is assigned.
PGM CH SEL 1-8	This switches the final output video.
PST CH SEL 1-8	This switches the preset video (the video to be output next).
MEMORY LOAD 1-8	This loads a preset memory.
DSK SRC SEL 1-8	During DSK compositing, this switches the channel of the overlaid logo or image.

3. Press the [VALUE] knob to apply the setting.

4. Press the [MENU] button to quit the menu.

When a control signal is input from an external source, the assigned function is executed. The GPI trigger is fixed at the trailing edge (low: ON).

Outputting a Tally Signal

A tally signal is output from the connector pin corresponding to the video channel being output, also including video composition and transition effects.

LAN/RS-232 Command Reference

V-60HD support two types of remote-interface communication: LAN and RS-232.

Using the CONTROL port (LAN) or RS-232 connector to send specific commands to the V-60HD from a controlling device lets you operate the V-60HD remotely.

LAN Interface

This uses the CONTROL port on the V-60HD.

You use Telnet to operate the V-60HD remotely over a LAN (TCP/IP protocol).

Communication standards

Port	CONTROL port (LAN)
Protocol	TCP
Port number	8023

Setting the IP address of the V-60HD

1. Select the [MENU] button → "LAN CONTROL."
2. Select a menu item, then use the [VALUE] knob to set the IP address.

Menu item	Explanation
CONFIGURE	This sets whether the IP address and subnet mask are obtained automatically (USING DHCP) or set manually (MANUALLY).
IP ADDRESS	This sets the IP address when "CONFIGURE" is set to "MANUALLY". Set this in accordance with the connected network.
SUBNET MASK	This sets the subnet mask when "CONFIGURE" is set to "MANUALLY". Set this in accordance with the connected network.

3. Press the [VALUE] knob to apply the setting.
4. Press the [MENU] button to quit the menu.

Verifying the LAN information

1. Select the [MENU] button → "LAN CONTROL" → "INFORMATION."
2. With the cursor positioned at "ENTER," press the [VALUE] knob.

You can check and verify the following information.

Indication	Explanation
STATUS	This displays the connection status.
IP ADDRESS	This displays the IP address.
SUBNET MASK	This displays the subnet mask.
MAC ADDRESS	This displays the MAC address.

3. Press the [MENU] button to quit the menu.

Cable wiring diagram

Use an RS-232 crossover cable to connect the V-60HD and the controller (an RS-232-compatible computer or other device).

* The connections between 4 and 6 and between 7 and 8 are inside the V-60HD.

Command Format

Commands are formatted using the configuration shown below. Commands are all in ASCII code.

stx	Command code	:	Parameter	,	Parameter	;
-----	--------------	---	-----------	---	-----------	---

stx	ASCII code "02H" is a control code indicating the start of a command. "H" indicates that it is a hexadecimal value.
Command code	This specifies the command type (3 letters of the alphabet).
Parameter	This is appended to a command that requires one or more parameter. The command and the parameter portion are separated by a ":" (colon). When there are multiple parameters, they are each separated by "," (comma) characters.
;	This is the code that the V-60HD recognizes as the end of a command.

* The codes of stx (02H), ACK (06H), and XON (11H)/ XOFF (13H) are the control codes.

List of Commands

* When sending a sequence of commands to the V-60HD from a controller, after each one, be sure to verify that an "ACK" response is returned before sending the next command.
