## UPGRADING VIRTUAL ENVIRONMENTS TO SUPPORT GROWING COUNCIL REQUIREMENTS

Wyre Forest is a district in the north of the county of Worcestershire. The district consists of large areas of rural countryside with many picturesque villages and towns. With that, the population has been growing significantly and so the demand for council services have also greatly increased. To support this, the council looked to level-up their IT environment in order to improve and maintain service standards across the district.

### OBJECTIVES

- Support growing population and increasing demand for council services
- Level-up the infrastructure to ensure service standards are maintained throughout the district
- Implement a new environment suitable and expandable for the future

### REQUIREMENTS

- Be able to handle and sync operations across multiple sites
- Flexible scalability in order to reduce the need for constant upgrades
- Technical expertise and support from both the vendor and management service provider

### SOLUTION

- HPE Nimble dHCI

### KEY PARTNER

- XMA

### OUTCOMES

- New flexible, modular and scalable solution able to support the council for future years
- Simplified management with a clearer view of the performance and quicker time for problem resolution
- Integrated proactive monitoring, support and predictive analytics across the solution
