

# The Wellness Mouse

Mousetrapper is the mouse alternative that prevents RSI and other problems that can occur when you use a conventional mouse. Because Mousetrapper is positioned centrally in front of the keyboard it encourages an ergonomically healthy position that keeps your arms close to your body and your hands near the keyboard.

## Why Mousetrapper?

### Most people who try get help!

Changing to a Mousetrapper makes a difference. The vast majority of those who try out one of our products continue to use it – eight out of ten say they find it beneficial!

### Easy to get started

Our centered mices have been developed to reduce strain on your hands, arms, shoulders and neck. Getting started and learning to use them is easy.

### Customise the buttons as you like

With our software MT Keys, you can choose which functions the buttons should have, so you can customise them according to your needs!

### Developed, designed and manufactured in Sweden

We set high standards in terms of both ergonomic features and attractive, timeless design. Everything from design and development to production and quality control takes place in our headquarters outside Stockholm.

### More than 29 years of experience

We know what we are talking about – we have been developing ergonomic mouse alternatives for over 29 years. Our Mousetrappers have a 2-year guarantee but have a considerably longer lifespan.
