

BCM957414N4140C

Dual-Port 25/10 Gb/s Ethernet PCI Express 3.0 x8 OCP 3.0 Small-Form-Factor Network Adapter

General Description

The Broadcom[®] BCM957414N4140C is a dual-port 25 Gb/s PCI Express 3.0 x8 network adapter designed to the Open Compute Project (OCP) 3.0 Design Specification in small form factor with two SFP28 network connectors. The adapter supports SFP28 optical modules and copper direct-attach cables. The network adapter uses the Broadcom BCM57414 25GbE MAC controller with an integrated dual-channel 25GbE SFI transceiver.

Features

- Dual-port pluggable media interface, which is compatible with a 25G SFP28 optical transceiver or a copper direct-attach cable.
- Fully compliant with the SFF-8402 standard.
- x8 PCI Express 3.0 compliant.
- SR-IOV with up to 128 virtual functions (VFs).
- Function-Level Reset (FLR) support.
- TruFlow[™] flow processing engine.
- Virtual Network Termination—VXLAN, NVGRE, Geneve, GRE encap/decap.
- vSwitch Acceleration.
- Tunnel-aware stateless offloads.
- DCB support – PFC, ETS, QCN, DCBx.
- RDMA over Converged Ethernet (RoCE)
- Network Controller Sideband Interface (NC-SI).
- SMBus 2.0.
- MCTP over SMBus.
- PCIe-based UART and KCS.
- Jumbo frames up to 9 KB.
- Advanced congestion avoidance.
- Multiqueue, NetQueue, and VMQ.
- IPv4 and IPv6 offloads.
- TCP, UDP, and IP checksum offloads.
- Large send offload (LSO).
- Large receive offload (LRO).
- TCP segmentation offload (TSO).
- Receive-side scaling (RSS).

- Transmit-side scaling (TSS).
- VLAN insertion/removal.
- Interrupt coalescing.
- Network boot—PXE, UEFI.
- iSCSI boot.
- Wake-on-LAN (WOL).
- MSI and MSI-X.
- Conforms to the OCP 3.0 Design Specification Version 1.00.

Applications

Dual-port 25-Gigabit Ethernet adapter for OCP systems.

Figure 1: BCM957414N4140C OCP 3.0 SFF Network Adapter

NOTE: [Figure 1](#) shows the pull-tab bracket installed by default. The surface markings of the component may not reflect the product you receive. Broadcom reserves the right to change any component on the printed circuit board with the same functionality.

1 Functional Description

This section provides the functional description of the BCM957414N4140C network adapter.

1.1 Block Diagram

Figure 2 shows the main functional blocks on the BCM957414N4140C network adapter.

Figure 2: BCM957414N4140C Block Diagram

1.2 Host Interface Connector

The BCM957414N4140C OCP network adapter interfaces with the system baseboard via the gold fingers compliant to the SFF-TA-1002 specification. The PCIe bus, NC-SI bus, SMBus interface, various other sideband signals, and power are assigned to this connector. The connector pinout complies with the primary connector (4C+ OCP) as described in the OCP 3.0 Design Specification. [Table 1](#) shows the signal pinout. Definitions of the signals at this connector are provided in the OCP 3.0 Design Specification.

1.3 BCM57414 Ethernet Controller

The BCM57414 Ethernet controller is configured as dual-port 25 Gb/s MAC with integrated SFP28 optical interface to the line side and x8 PCI Express v3.0 interface to the system host.

1.4 PCI Express Interface

PCIe is a high-bandwidth serial bus providing a low pin-count interface as an alternative to parallel PCI. It is part of the host interface connector. The BCM57414 complies with the PCI Express Base Specification Revision 3.0, and supports an 8-lane PCIe 3.0 interface via the host interface connector.

1.5 NC-SI Interface

The BCM57414 Ethernet controller supports the Network Controller Sideband Interface (NC-SI) Specification version 1.1.0. The NC-SI provides a standardized interface between the system baseboard management controller (BMC) and the integrated NC-SI module of the BCM57414.

1.6 SMBus Interface

The BCM57414 Ethernet Controller SMB0 interface supports serial communications between the BCM57414 and the system. The interface allows the Ethernet controller to act as an SMBus master or a slave device.

1.7 Nonvolatile RAM

The BCM57414 Ethernet controller requires a nonvolatile serial flash memory (NVRAM) to store the device firmware, PCI configuration space settings (for example, device ID, vendor ID), MAC address, and so on. After power-up, the firmware is downloaded into the device memory and executed by the on-chip processor.

1.8 Heat Sink

The passive heat sink is attached to the Ethernet controller using four spring-loaded push pins that insert into four mounting holes.

To prevent damage to the BCM57414 Ethernet controller in the event of a missing heat sink, the network adapter is not allowed to power up.

1.9 Power Supplies

All power is derived from the network adapter host interface connector 12V and 3.3V supply which feeds the on-board regulators that provide the necessary power to the various components on the network adapter. The network adapter has six switching voltage regulators that power the card's various +1.0V, +1.25V, +1.8V, and +3.3V loads.

1.10 LED Functions and Locations

The SFP28 port supports two LEDs to indicate traffic activities and link speed. The LEDs are visible as shown in [Figure 3](#). Its locations and form factors conform to the OCP 3.0 Design Specification.

Figure 3: Activity and Link LED Locations

Table 2: LED Functions

LED Type	Color/Behavior	Note
Activity	Off	No Link
	Green (blinking)	Link up (traffic flowing)
Link	Off	No Link
	Green	Linked at 25 Gb/s
	Amber	Linked at 10 Gb/s or 1 Gb/s

2 Regulatory and Safety Approvals

The BCM957414N4140C network adapter meets the regulatory of OCP 3.0 Design Specification. For additional information on required compliance including environmental, EMC, Product Safety, and immunity (ESD), reference the OCP 3.0 Design Specification.

3 Board Power Consumption

Table 3 shows the total power consumption required on the 12V and 3.3V edge connector pins for the BCM957414N4140C.

Table 3: Board Power Consumption

Traffic Mode	Typical (Watt)
Dual-Port 25G	11.6

NOTE: Typical: BCM57414 T_c (Case Temperature) = 85°C, PCIe 3.0 x8, 100% traffic, and DAC cable.

4 Airflow Requirements

The maximum junction temperature (T_j) for the BCM57414 is 110°C. The system designer should deploy methods to monitor the BCM57414 T_j and provide sufficient airflow for keeping T_j below 110°C. According to the thermal analysis, 100 LFM is required for the BCM957414N4140C to operate at 55°C ambient temperature (T_a) and 150 LFM at 65°C (T_a).

5 Package Weight

Table 4 shows the BCM957414N4140C package weight (excluding faceplate, optical module, and so on).

Table 4: Package Weight

Parameter	Symbol	Value	Unit
BCM957414N4140C weight	g	91	gram

6 Physical Specifications

The physical board dimensions are compliant to the OCP 3.0 Design Specification, Small Form Factor (SFF), and faceplate. See the mechanical dimensions in the OCP 3.0 Design Specification for additional information.

The BCM957414N4140C supports all three faceplates, for example, pull tab, ejector latch, and internal lock. The pull tab is installed by default. For additional mechanical dimensions, see the OCP 3.0 Design Specification.
