Mobile broadband speeds will vary and are dependent on a range of factors including network configuration, network capacity, signal strength, and the conditions of your mobile broadband subscription.³ Maximum wireless signal rate derived from IEEE Standard 802.11n specifications. Actual throughput will vary. Network condition and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental factors will adversely affect wireless signal range.⁴ SIM card and service plan not included.

All references to speed and range are for comparison purposes only. Actual speeds, locations, size, and shape are subject to change without notice, and actual product appearance may differ from that depicted on the package. See inside package for warranty details.
