NO CONFIGURATION REQUIRED

<sup>1</sup> Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic and network overhead, lower actual data throughput rate. <sup>2</sup> Attached devices must have a NIC that supports 802.1p queuing to allow QoS functionality. <sup>3</sup> Jumbo Frame support for 9K Bytes is applicable in Gigabit mode only. Use of Jumbo Frame feature requires the PC to have a Gigabit NIC that supports Jumbo Frames. Jumbo Frame performance may be affected when used in 10/100 Fast Ethernet mode. Product specifications, size and shape are subject to change without notice, and actual product appearance may differ from that depicted on the packaging. See inside package for warranty details.
