- The gain setting now persists across reboots.

### **EasyIP TableMIC D 1.01**

June 28, 2021

#### Improvements

- Manufacturing improvements.

### **EasyIP TableMIC D 1.00**

June 11, 2021

#### Notes

- Initial release.

## Firmware Update Instructions – EasyIP TableMIC D

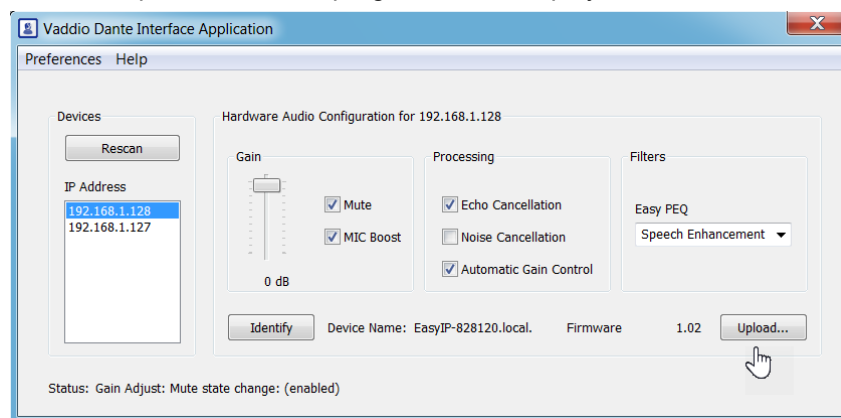

You will need the Vaddio Dante Interface Application to update EasyIP microphone firmware. This free application is available from [legrandav.com](http://legrandav.com).

When you open the Vaddio Dante Interface Application, it displays the IP addresses of the EasyIP microphones on the subnet.

To update EasyIP microphone firmware:

1. Download the firmware and release notes.
2. Open the Vaddio Dante Interface Application if you have not done so already.
3. Select the microphone to update.
4. Select Upload and navigate to the firmware file.

Do not disconnect the microphone while the progress bar is displayed.

This update can take up to 5 minutes to complete. While you're waiting, you could try the following:

- Think about how you would go about proving or disproving your favorite nonsensical theory.
- How many alternate spellings of your name can you invent?
- Develop a hypothesis to explain what happens to pen caps, socks, and dropped lug nuts when you can't find them.

After the update is complete, the Vaddio Dante Interface Application will display the new firmware version. Enjoy that new-firmware smell!
