VELOCIX™

Velocix is the world's leading provider of carrier-grade video streaming and advertising technology. It develops video solutions tailored to the needs of large-scale video service operators, including telecommunications and cable operators, internet service providers, broadcasters, and over-the-top (OTT) streaming companies. The company's solutions are designed for reliability, flexibility, and scaling efficiency.

Objectives

- Source hardware platforms that could support the carrier-grade commitment made to customers
- Eradicate server failures and network card failures, effectively eliminating service interruptions
- Help service providers connect millions of consumers globally with entertainment content

Requirements

- Ensure systems are stable and always accessible
- Provide as much capability or capacity as possible within a small footprint
- Significantly reduce the cost of delivering a stream, thereby reducing the total cost of ownership

Solution

- Platform that enables service providers to stream content to their end customers and monetize it with personalized advertisements.

Hardware

- HPE ProLiant DL325 Gen10 servers

Software

- HPE OneView
- HPE Integrated Lights-Out (iLO)

HPE Solution Benefits

- Delivers reliable online streaming services, even under extreme loading
- Increases performance density by 4x1
- Meets tight delivery timeframes to support the world's leading telecommunications companies
